Chapter 1. Mathematical Shapes of Uncertainty	1
1. Basic notations	3
2. Variety of mathematical forms of UP	4
3. Function theoretic background	10
Chapter 2. Gap Theorems	17
1. Classical Gap Theorems	18
2. Spectral gap as a property of the support	22
3. Toeplitz kernels and uniform approximation	23
4. A formula for the gap characteristic of a set	24
5. Examples and applications	27
6. Appendix: Proof of the gap formula	29
7. Appendix: Technical lemmas	51
8. Appendix: De Branges' theorem 66 in Toeplitz form	61
Chapter 3. A Problem by Pólya and Levinson	67
1. Pólya sequences	67
2. A theorem on existence of a de Branges' space in $L^2$	68
3. Beurling–Malliavin densities	69
4. Two theorems on Toeplitz kernels	70
5. A description of Pólya sequences	71
6. Technical lemmas	72
7. Proofs of theorems	74
Chapter 4. Determinacy of Measures and Oscillations of High-pass Signals	77
1. Sign changes of a measure with a spectral gap	77
2. Entire functions and densities	79
3. A lemma on $d$ -uniform sequences	80
4. M. Riesz-type criterion and its consequences	81
5. Extreme measures in the indeterminate case	85
6. Measures annihilating Paley-Wiener spaces	90
7. Sign changes of measures with spectral gap	93
Chapter 5. Beurling–Malliavin and Bernstein's Problems	95
1. A problem on completeness of exponentials	95
2. Structure of proof of BM Theorem: BM theory	99
3. Bernstein's problem	101
4. Semi-continuous weights	102
5. Characteristic sequences	103

6.	Equivalence between weighted uniform and $L^p$ -approximation	104
7.	A criterion for completeness of polynomials in $C_W$	105
8.	Lemmas and proofs	106
9.	Examples and corollaries	114
Chapter 6. The Type Problem		119
1.	General case $p \neq 2$	120
2.	Known examples	121
3.	Polynomial decay	122
4.	Completeness of exponentials in $L^p$ and $C_W$	123
5.	Main results	124
6.	Classical results and further corollaries	126
7.	Auxiliary statements	130
8.	Proofs of main results	139
Chapter 7. Toeplitz Approach to UP		143
1.	Spaces of entire functions and their zero sets	143
2.	Model spaces and Toeplitz operators	144
3.	Spectral theory	145
4.	Outer, inner and Herglotz functions	146
5.	Model spaces	148
6.	Weyl inner functions	148
7.	Modified Fourier transform	149
8.	Entire functions	151
9.	Square root transformation	153
10.	Dimension and triviality of Toeplitz kernels	153
11.	General form of Levinson's completeness theorem	161
12.	Applications to UP	164
Chapter 8. Toeplitz Version of the Beurling–Malliavin Theory		183
1.	The language of Toeplitz kernels	184
2.	Super-exponential case	186
3.	Sub-exponential case	187
4.	The structure of BM theory	189
5.	One-sided Lipschitz condition for the Hilbert transform	189
6.	Triviality of Toeplitz kernels	193
7.	Non-triviality of Toeplitz kernels in Smirnov–Nevanlinna class	197
8.	Multiplier theorem	200
9.	Non-triviality of Toeplitz kernels in Hardy spaces	204
Bibliography		211
