Preface	xi
0.1. Organization	xii
0.2. Topics which are not covered	xiii
0.3. Topics which are double covered	xiv
0.4. Notation	xiv
Acknowledgments	xiv
Chapter 1. Introduction	1
1.1. What are eigenfunctions and why are they useful	1
1.2. Notation for eigenvalues	3
1.3. Weyl's law for $(-\Delta)$ -eigenvalues	3
1.4. Quantum mechanics	4
1.5. Dynamics of the geodesic or billiard flow	6
1.6. Intensity plots and excursion sets	7
1.7. Nodal sets and critical point sets	9
1.8. Local versus global analysis of eigenfunctions	10
1.9. High frequency limits, oscillation and concentration	10
1.10. Spectral projections	11
1.11. $L^p$ norms	12
1.12. Matrix elements and Wigner distributions	13
1.13. Egorov's theorem	14
1.14. Ehrenfest time	14
1.15. Weak* limit problem	14
1.16. Ergodic versus completely integrable geodesic flow	17
1.17. Ergodic eigenfunctions	18
1.18. Quantum unique ergodicity (QUE)	18
1.19. Completely integrable eigenfunctions	18
1.20. Heisenberg uncertainty principle	19
1.21. Sequences of eigenfunctions and length scales	20
1.22. Localization of eigenfunctions on closed geodesics	21
1.23. Some remarks on the contents and on other texts	22
1.24. References	23
Bibliography	25
Chapter 2. Geometric preliminaries	29
2.1. Symplectic linear algebra and geometry	29
2.2. Symplectic manifolds and cotangent bundles	31
2.3. Lagrangian submanifolds	32
2.4. Jacobi fields and Poincaré map	33

2.5. Pseudo-differential operators	34
2.6. Symbols	35
2.7. Quantization of symbols	36
2.8. Action of a pseudo-differential operator on a rapidly oscillating exponential	37
Bibliography	39
Chapter 3. Main results	41
3.1. Universal $L^p$ bounds	41
3.2. Self-focal points and extremal $L^p$ bounds for high $p$	42
3.3. Low $L^p$ norms and concentration of eigenfunctions around geodesics	43
3.4. Kakeya-Nikodym maximal function and extremal $L^p$ bounds for small $p$	44
3.5. Concentration of joint eigenfunctions of quantum integrable $\Delta$ around closed geodesics	45
3.6. Quantum ergodic restriction theorems for Cauchy data	48
3.7. Quantum ergodic restriction theorems for Dirichlet data	50
3.8. Counting nodal domains and nodal intersections with curves	52
3.9. Intersections of nodal lines and general curves on negatively curved surfaces	56
3.10. Complex zeros of eigenfunctions	56
Bibliography	59
Chapter 4. Model spaces of constant curvature	61
4.1. Euclidean space	61
4.2. Euclidean wave kernels	65
4.3. Flat torus $\mathbb{T}^n$	73
4.4. Spheres $S^n$	74
4.5. Hyperbolic space and non-Euclidean plane waves	80
4.6. Dynamics and group theory of $G = PSL(2, \mathbb{R})$	81
4.7. The Hyperbolic Laplacian	82
4.8. Wave kernel and Poisson kernel on Hyperbolic space $\mathbf{H}^n$	83
4.9. Poisson kernel	86
4.10. Spherical functions on $\mathbf{H}^2$	87
4.11. The non-Euclidean Fourier transform	87
4.12. Hyperbolic cylinders	87
4.13. Irreducible representations of $G$	88
4.14. Compact hyperbolic quotients $\mathbf{X}_\Gamma = \Gamma \backslash \mathbf{H}^2$	88
4.15. Representation theory of $G$ and spectral theory of $\Delta$ on compact quotients	89
4.16. Appendix on the Fourier transform	89
Bibliography	93
Chapter 5. Local structure of eigenfunctions	95
5.1. Local versus global eigenfunctions	95
5.2. Small balls and local dilation	96
5.3. Local elliptic estimates of eigenfunctions	98

5.4. $\lambda$ -Poisson operators	102
5.5. Bernstein estimates	104
5.6. Frequency function and doubling index	105
5.7. Carleman estimates	107
5.8. Norm square of the Cauchy data	109
5.9. Hyperbolic aspects	113
Bibliography	115
Chapter 6. Hadamard parametrices on Riemannian manifolds	119
6.1. Hadamard parametrix	119
6.2. Hadamard-Riesz parametrix	121
6.3. The Hadamard-Feynman fundamental solution and Hadamard's parametrix	122
6.4. Sketch of proof of Hadamard's construction	123
6.5. Convergence in the real analytic case	126
6.6. Away from $\mathcal{C}_{\mathbb{R}}$	126
6.7. Hadamard parametrix on a manifold without conjugate points	127
6.8. Dimension 3	127
6.9. Appendix on homogeneous distributions	131
Bibliography	133
Chapter 7. Lagrangian distributions and Fourier integral operators	135
7.1. Introduction	135
7.2. Homogeneous Fourier integral operators	137
7.3. Semi-classical Fourier integral operators	146
7.4. Principal symbol, testing and matrix elements	150
7.5. Composition of half-densities on canonical relations in cotangent bundles	157
Bibliography	159
Chapter 8. Small time wave group and Weyl asymptotics	161
8.1. Hörmander parametrix	161
8.2. Wave group and spectral projections	162
8.3. Small-time asymptotics for microlocal wave operators	163
8.4. Weyl law and local Weyl law	165
8.5. Fourier Tauberian approach	167
8.6. Tauberian lemmas	171
Bibliography	173
Chapter 9. Matrix elements	175
9.1. Invariance properties	176
9.2. Proof of Egorov's theorem	176
9.3. Weak* limit problem	178
9.4. Matrix elements of spherical harmonics	179
9.5. Quantum ergodicity and mixing of eigenfunctions	180
9.6. Hassell's scarring result for stadia	188
9.7. Appendix on Duhamel's formula	192

Bibliography	195
Chapter 10. $L^p$ norms	197
10.1. Discrete Restriction theorems	199
10.2. Random spherical harmonics and extremal spherical harmonics	200
10.3. Sketch of proof of the Sogge $L^p$ estimates	201
10.4. Maximal eigenfunction growth	203
10.5. Geometry of loops and return maps.	210
10.6. Proof of Theorem 10.21. Step 1: Safarov's pre-trace formula	216
10.7. Proof of Theorem 10.29. Step 2: Estimates of remainders at $\mathcal{L}$ -points	222
10.8. Completion of the proof of Proposition 10.30 and Theorem 10.29: study of $\tilde{R}_{j_1}$	223
10.9. Infinitely many twisted self-focal points	227
10.10. Dynamics of the first return map at a self-focal point	228
10.11. Proof of Proposition 10.20	229
10.12. Uniformly bounded orthonormal basis	231
10.13. Appendix: Integrated Weyl laws in the real domain	232
Bibliography	235
Chapter 11. Quantum Integrable systems	239
11.1. Classical integrable systems	239
11.2. Normal forms of integrable Hamiltonians near non-degenerate singular orbits	242
11.3. Joint eigenfunctions	243
11.4. Quantum toral integrable systems	243
11.5. Lagrangian torus fibration and classical moment map	246
11.6. $L^p$ norms of Quantum integrable eigenfunctions	246
11.7. Sketch of proof of Theorem 11.8	247
11.8. Mass concentration of special eigenfunctions on hyperbolic orbits in the quantum integrable case	249
11.9. Details on $M_h$	250
11.10. Concentration of quantum integrable eigenfunctions on submanifolds	251
Bibliography	253
Chapter 12. Restriction theorems	255
12.1. Null restrictions, degenerate restrictions and 'goodness'	256
12.2. $L^2$ upper bounds on Dirichlet or Neumann data of eigenfunctions	258
12.3. Cauchy data of Dirichlet eigenfunctions for manifolds with boundary	259
12.4. Restriction bounds for Neumann eigenfunctions	260
12.5. Periods and Fourier coefficients of eigenfunctions on a closed geodesic	260
12.6. Kuznecov sum formula: Proofs of Theorems 12.8 and 12.10	262
12.7. Restricted Weyl laws	263
12.8. Relating matrix elements of restrictions to global matrix elements	265
12.9. Geodesic geometry of hypersurfaces	266

12.10.	Tangential cutoffs	268
12.11.	Canonical relation of $\gamma_H$	268
12.12.	The canonical relation of $\gamma_H^* \text{Op}_H(a) \gamma_H$	269
12.13.	The canonical relation $\Gamma^* \circ C_H \circ \Gamma$	271
12.14.	The pullback $\Gamma_H := \Delta_t^* \Gamma^* \circ C_H \circ \Gamma$	272
12.15.	The pushforward $\pi_{t*} \Delta_t^* \Gamma^* \circ C_H \circ \Gamma$	272
12.16.	The symbol of $U(t_1)^* (\gamma_H^* \text{Op}_H(a) \gamma_H)_{\geq \varepsilon} U(t_2)$	274
12.17.	Proof of the restricted local Weyl law: Proposition 12.14	275
12.18.	Asymptotic completeness and orthogonality of Cauchy data	276
12.19.	Expansions in Cauchy data of eigenfunctions	278
12.20.	Bochner-Riesz means for Cauchy data	280
12.21.	Quantum ergodic restriction theorems	281
12.22.	Rellich approach to QER: Proof of Theorem 12.33	283
12.23.	Proof of Theorem 12.36 and Corollary 12.37	286
12.24.	Quantum ergodic restriction (QER) theorems for Dirichlet data	287
12.25.	Time averaging	289
12.26.	Completion of the proofs of Theorems 12.39 and 12.40	292
Bibliography		295
Chapter 13. Nodal sets: Real domain		299
13.1.	Fundamental existence theorem for nodal sets	300
13.2.	Curvature of nodal lines and level lines	301
13.3.	Sub-level sets of eigenfunctions	302
13.4.	Nodal sets of real homogeneous polynomials	304
13.5.	Rectifiability of the nodal set	305
13.6.	Doubling estimates	307
13.7.	Lower bounds for $\mathcal{H}^{m-1}(\mathcal{N}_\lambda)$ for $C^\infty$ metrics	309
13.8.	Counting nodal domains	315
Bibliography		327
Chapter 14. Eigenfunctions in the complex domain		333
14.1.	Grauert tubes and complex geodesic flow	334
14.2.	Analytic continuation of the exponential map	335
14.3.	Maximal Grauert tubes	335
14.4.	Model examples	336
14.5.	Analytic continuation of eigenfunctions	337
14.6.	Maximal holomorphic extension	338
14.7.	Husimi functions	339
14.8.	Poisson wave operator and Szegő projector on Grauert tubes	339
14.9.	Poisson operator and analytic continuation of eigenfunctions	339
14.10.	Analytic continuation of the Poisson wave group	340
14.11.	Complexified spectral projections	340
14.12.	Poisson operator as a complex Fourier integral operator	341
14.13.	Complexified Poisson kernel as a complex Fourier integral operator	342
14.14.	Analytic continuation of the Poisson wave kernel	343
14.15.	Hörmander parametrix for the Poisson wave kernel	343
14.16.	Subordination to the heat kernel	343

14.17.	Fourier integral distributions with complex phase	344
14.18.	Analytic continuation of the Hadamard parametrix	344
14.19.	Analytic continuation of the Hörmander parametrix	345
14.20.	$\Delta_g, \square_g$ and characteristics	345
14.21.	Characteristic variety and characteristic conoid	346
14.22.	Hadamard parametrix for the Poisson wave kernel	346
14.23.	Hadamard parametrix as an oscillatory integral with complex phase	347
14.24.	Tempered spectral projector and Poisson semi-group as complex Fourier integral operators	350
14.25.	Complexified wave group and Szegő kernels	351
14.26.	Growth of complexified eigenfunctions	352
14.27.	Siciak extremal functions: Proof of Theorem 14.14 (1)	354
14.28.	Pointwise phase space Weyl laws on Grauert tubes	356
14.29.	Proof of Corollary 14.16	358
14.30.	Complex nodal sets and sequences of logarithms	359
14.31.	Real zeros and complex analysis	361
14.32.	Background on hypersurfaces and geodesics	362
14.33.	Proof of the Donnelly-Fefferman lower bound (A. Brudnyi)	367
14.34.	Properties of eigenfunctions in good balls	369
14.35.	Background on good-ness	369
14.36.	A. Brudnyi's proof of Proposition 14.38	370
14.37.	Equidistribution of complex nodal sets of real ergodic eigenfunctions	372
14.38.	Sketch of the proof	373
14.39.	Growth properties of complexified eigenfunctions	374
14.40.	Proof of Lemma 14.48	377
14.41.	Proof of Lemma 14.47	377
14.42.	Intersections of nodal sets and analytic curves on real analytic surfaces	378
14.43.	Counting nodal lines which touch the boundary in analytic plane domains	379
14.44.	Application to Pleijel's conjecture	384
14.45.	Equidistribution of intersections of nodal lines and geodesics on surfaces	384
	Bibliography	389
	Index	393
