

# Contents

Introduction	1
Chapter 1. Basic definitions and examples	3
1.1. Hadwiger's decomposition of a simplex	6
Chapter 2. McMullen's decomposition theorem	9
Chapter 3. Valuations on the line	15
3.1. Hadwiger's characterization of $n$ -homogeneous valuations	15
3.2. Supporting functional and area measure	18
Chapter 4. McMullen's description of $(n - 1)$ -homogeneous valuations	21
4.1. Classification of valuations on the plane	25
Chapter 5. The Klain–Schneider characterization of simple valuations	27
5.1. Klain–Schneider characterization of simple valuations (even case)	27
5.2. Klain–Schneider characterization of simple valuations (odd case)	32
Chapter 6. Digression on the theory of generalized functions on manifolds	37
Chapter 7. The Goodey–Weil imbedding	39
Chapter 8. Digression on vector bundles	47
8.1. Generalized sections of vector bundles and invariant form of the Goodey–Weil imbedding	51
Chapter 9. The irreducibility theorem	53
9.1. The Klain imbedding and the irreducibility theorem in the even case	53
9.2. The Schneider imbedding and the irreducibility theorem in the odd case	54
Chapter 10. Further developments	61
10.1. Smooth translation-invariant valuations	61

10.2.	Normal cycle of convex sets and a presentation of smooth valuations	61
10.3.	Product on valuations	63
10.4.	Convolution of valuations	65
10.5.	Fourier type transform on valuations	66
10.6.	Pull-back and push-forward on valuations	67
10.7.	Valuations invariant under a group	69
10.8.	Valuations, Monge-Ampère operators, and non-commutative determinants	71
	Bibliography	81
