

# Contents

Preface	vii
Chapter 1. Introductory biology	1
Chapter 2. Introduction to modeling	7
Chapter 3. Models of population dynamics	15
3.1. Chemostat	15
3.2. Infectious diseases	18
3.3. A cancer model	21
Chapter 4. Cancer and the immune system	25
Chapter 5. Parameters estimation	33
Chapter 6. Mathematical analysis inspired by cancer models	41
Chapter 7. Mathematical model of atherosclerosis: Risk of high cholesterol	51
Chapter 8. Mathematical analysis inspired by the atherosclerosis model	63
Chapter 9. Mathematical models of chronic wounds	71
Chapter 10. Mathematical analysis inspired by the chronic wound model	79
Appendix: Introduction to PDEs	85
A.1. Elliptic equations	85
A.2. Parabolic equations	88
A.3. Nonlinear equations and systems	89
A.4. Free boundary problems	91
Bibliography	95
Index	99
