Preface	ix
Acknowledgments	xi
Chapter 1. Introduction. Smooth vs the non-smooth categories	1
1.1. Preview	1
1.2. Historical context	3
1.3. Iterated function systems (IFS)	7
1.4. Frequency bands, filters, and representations of the Cuntz-algebras	13
1.5. Frames	16
1.6. Key themes in the book	17
Chapter 2. Spectral pair analysis for IFSs	23
2.1. The scale-4 Cantor measure, and its harmonic analysis	23
2.2. The middle third Cantor measure	27
2.3. Infinite Bernoulli convolutions	29
2.4. The scale-4 Cantor measure, and scaling by 5 in the spectrum	33
2.5. IFS measures and admissible harmonic analyses	37
2.6. Harmonic analysis of IFS systems with overlap	38
Chapter 3. Harmonic analyses on fractals, with an emphasis on iterated function systems (IFS) measures	45
3.1. Harmonic analysis in the smooth vs the non-smooth categories	45
3.2. Spectral pairs and the Fuglede conjecture	46
3.3. Spectral pairs	51
3.4. Spectral theory of multiple intervals	58
Chapter 4. Four kinds of harmonic analysis	69
4.1. Orthogonal Fourier expansions	69
4.2. Frame and related non-orthogonal Fourier expansions	73
4.3. Wavelet expansions	79
4.4. Harmonic analysis via reproducing kernel Hilbert spaces (RKHS)	98
Chapter 5. Harmonic analysis via representations of the Cuntz relations	135
5.1. From frequency band filters to signals and to wavelet expansions	136
5.2. Stochastic processes via representations of the Cuntz relations	141
5.3. Representations in a <i>universal Hilbert space</i>	165
Chapter 6. <i>Positive definite functions</i> and kernel analysis	175
6.1. Positive definite kernels and harmonic analysis in $L^2(\mu)$ when $\mu$ is a gap IFS fractal measure	175

6.2.	Positive definite kernels and harmonic analysis in $L^2(\mu)$ when $\mu$ is a general singular measure in a finite interval	180
6.3.	Positive definite kernels and the associated Gaussian processes	211
Chapter 7.	Representations of <i>Lie groups</i> . Non-commutative harmonic analysis	219
7.1.	Fundamental domains as non-commutative tiling constructions	220
7.2.	Symmetry for unitary representations of Lie groups	226
7.3.	Symmetry in physics and reflection positive constructions via unitary representations of Lie groups	241
	Bibliography	245
	Index	265
