CHAPTER I.

INTRODUCTION.

SECTION.		PAGE.
1—7	[<i>Jan. 2, 1891.</i>] Preliminary Remarks	1
8—13	[<i>Jan. 16, 1891.</i>] On the nature of Anti-Mathematicians and of Mathematical Methods of Enquiry	7
14—16	[<i>Jan. 30, 1891.</i>] Description of some Electromagnetic Results deduced by Mathematical Reasoning	14

CHAPTER II.

OUTLINE OF THE ELECTROMAGNETIC CONNECTIONS.

(Pages 20 to 131.)

SECTION.		PAGE.
20	[<i>Feb. 13, 1891.</i>] Electric and Magnetic Force ; Displacement and Induction ; Elastivity and Permittivity, Inductivity and Reluc- tivity	20
21	Electric and Magnetic Energy	21
22	Eolotropic Relations	22
23	Distinction between Absolute and Relative Permittivity or Inductivity	23
24	Dissipation of Energy. The Conduction-current ; Conductivity and Resistivity. The Electric Current	24
25	Fictitious Magnetic Conduction-current and Real Magnetic Current	25
26	[<i>Feb. 27, 1891.</i>] Forces and Fluxes... ..	25
27	Line-integral of a Force. Voltage and Gaussage	26
28	Surface-integral of a Flux. Density and Intensity	27
29	Conductance and Resistance	27
30	Permittance and Elastance	28
31	Permeance, Inductance and Reluctance	29
32	Inductance of a Circuit	30

CONTENTS.

SECTION.	PAGE.
33 [March 13, 1891.] Cross-connections of Electric and Magnetic Force. Circuital Flux. Circutation	32
34 First Law of Circutation	33
35 Second Law of Circutation	35
36 Definition of Curl	35
37 Impressed Force and Activity	36
38 Distinction between Force of the Field and Force of the Flux ...	37
39 [March 27, 1891.] Classification of Impressed Forces	38
40 Voltaic Force	39
41 Thermo-electric Force... ..	40
42 Intrinsic Electrification... ..	41
43 Intrinsic Magnetisation	41
44 The Motional Electric and Magnetic Forces. Definition of a Vector-Product	42
45 Example. A Stationary Electromagnetic Sheet	43
46 [April 17, 1891.] Connection between Motional Electric Force and "Electromagnetic Force"	44
47 Variation of the Induction through a Moving Circuit	45
48 Modification. Circuit fixed. Induction moving equivalently ...	46
49 The Motional Magnetic Force	48
50 The "Magneto-electric Force"	49
51 Electrification and its Magnetic Analogue. Definition of "Divergence"	49
52 A Moving Source equivalent to a Convection Current, and makes the True Current Circuital	51
53 [May 1, 1891.] Examples to illustrate Motional Forces in a Moving Medium with a Moving Source. (1.) Source and Medium with a Common Motion. Flux travels with them undisturbed ...	53
54 (2.) Source and Medium in Relative Motion. A Charge suddenly jerked into Motion at the Speed of Propagation. Generation of a Spherical Electromagnetic Sheet; ultimately Plane. Equations of a Pure Electromagnetic Wave	54
55 (3.) Sudden Stoppage of Charge. Plane Sheet moves on. Spherical Sheet generated. Final Result, the Stationary Field	57
56 (4.) Medium moved instead of Charge. Or both moved with same Relative Velocity	58
57 (5.) Meeting of a Pair of Plane Sheets with Point-Sources. Cancellation of Charges; or else Passage through one another; different results. Spherical Sheet with two Plane Sheet Appendages	59
58 (6.) Spherical Sheet without Plane Appendages produced by sudden jerking apart of opposite Charges	60
59 (7.) Collision of Equal Charges of same Name	61
60 (8.) Hemispherical Sheet. Plane, Conical, and Cylindrical Boundaries... ..	61
61 General Nature of Electrified Spherical Electromagnetic Sheet ...	63

CONTENTS

SECTION.	PAGE.
62 [May 29, 1891.] General Remarks on the Circuital Laws. Ampère's Rule for deriving the Magnetic Force from the Current. Rational Current-element	64
63 The Cardinal Feature of Maxwell's System. Advice to anti- Maxwellians	66
64 Changes in the Form of the First Circuital Law	67
65 Introduction of the Second Circuital Law	68
66 [July 3, 1891.] Meaning of True Current. Criterion	70
67 The Persistence of Energy. Continuity in Time and Space and Flux of Energy	72
68 Examples. Convection of Energy and Flux of Energy due to an active Stress. Gravitational difficulty	74
69 [July 17, 1891.] Specialised form of expression of the Con- tinuity of Energy	77
70 Electromagnetic Application. Medium at Rest. The Poynting Flux	78
71 Extension to a Moving Medium. Full interpretation of the Equation of Activity and derivation of the Flux of Energy ...	80
72 Derivation of the Electromagnetic Stress from the Flux of Energy. Division into an Electric and a Magnetic Stress ...	83
73 [July 31, 1891.] Uncertainty regarding the General Application of the Electromagnetic Stress	85
74 The Electrostatic Stress in Air	87
75 The Moving Force on Electrification, bodily and superficial. Harmonisation	90
76 Depth of Electrified Layer on a Conductor	91
77 [Aug. 21, 1891.] Electric Field disturbed by Foreign Body. Effect of a Spherical Non-conductor	93
78 Dynamical Principle. Any Stress Self-equilibrating	95
79 Electric Application of the Principle. Resultant Action on Solid Body independent of the Internal Stress, which is statically indeterminate. Real Surface Traction is the Stress Difference	96
80 Translational Force due to Variation of Permittivity. Harmoni- sation with Surface Traction	98
81 Movement of Insulators in Electric Field. Effect on the Stored Energy	99
82 Magnetic Stress. Force due to Abrupt or Gradual Change of Inductivity. Movement of Elastically Magnetised Bodies ...	100
82A [Sept. 4, 1891.] Force on Electric Current Conductors. The Lateral Pressure becomes prominent, but no Stress Discon- tinuity in general	102
83 Force on Intrinsically Magnetised Matter. Difficulty. Maxwell's Solution probably wrong. Special Estimation of Energy of a Magnet and the Moving Force it leads to	103
84 Force on Intrinsically Electrified Matter	106
85 Summary of the Forces. Extension to include varying States in a Moving Medium	107

CONTENTS.

SECTION.	PAGE.
86 [Sept. 25, 1891.] Union of Electric and Magnetic to produce Electromagnetic Stress. Principal Axes	109
87 Dependence of the Fluxes due to an Impressed Force upon its Curl only. General Demonstration of this Property ...	110
88 Identity of the Disturbances due to Impressed Forces having the same Curl. Example:—A Single Circuital Source of Disturbance	112
89 Production of Steady State due to Impressed Force by crossing of Electromagnetic Waves. Example of a Circular Source. Distinction between Source of Energy and of Disturbance	113
90 [Oct. 16, 1891.] The Eruption of “ 4π ”s.	116
91 The Origin and Spread of the Eruption	117
92 The Cure of the Disease by Proper Measure of the Strength of Sources	119
93 Obnoxious Effects of the Eruption	120
94 A Plea for the Removal of the Eruption by the Radical Cure	122
95 [Oct. 30, 1891.] Rational <i>v.</i> Irrational Electric Poles	123
96 Rational <i>v.</i> Irrational Magnetic Poles	125
APPENDIX A. [Jan. 23, 1891.]	
THE ROTATIONAL ETHER IN ITS APPLICATION TO ELECTROMAGNETISM ...	127

CHAPTER III.

THE ELEMENTS OF VECTORIAL ALGEBRA AND ANALYSIS.

(Pages 132 to 305.)

SECTION.	PAGE.
97 [Nov. 13, 1891.] Scalars and Vectors	132
98 Characteristics of Cartesian and Vectorial Analysis	133
99 Abstrusity of Quaternions and Comparative Simplicity gained by ignoring them... ..	134
100 Elementary Vector Analysis independent of the Quaternion ...	136
101 Tait <i>v.</i> Gibbs and Gibbs <i>v.</i> Tait	137
102 Abolition of the Minus Sign of Quaternions	138
103 [Dec. 4, 1891.] Type for Vectors. Greek, German, and Roman Letters unsuitable. Clarendon Type suitable. Typographical Backsliding in the Present Generation... ..	139
104 Notation. Tensor and Components of a Vector. Unit Vectors of Reference	142
105 The Addition of Vectors. Circuital Property	143
106 Application to Physical Vectors. Futility of Popular Demonstrations. Barbarity of Euclid	147
107 [Dec. 18, 1891.] The Scalar Product of Two Vectors. Notation and Illustrations	148
108 Fundamental Property of Scalar Products, and Examples ...	151
109 Reciprocal of a Vector	155

CONTENTS.

SECTION.	PAGE.
110 Expression of any Vector as the Sum of Three Independent Vectors	155
111 [<i>Jan. 1, 1892.</i>] The Vector Product of Two Vectors. Illustrations	156
112 Combinations of Three Vectors. The Parallelepipedal Property	158
113 Semi-Cartesian Expansion of a Vector Product, and Proof of the Fundamental Distributive Principle	159
114 Examples relating to Vector Products	162
115 [<i>Jan. 29, 1892.</i>] The Differentiation of Scalars and Vectors ...	163
116 Semi-Cartesian Differentiation. Examples of Differentiating Functions of Vectors	165
117 Motion along a Curve in Space. Tangency and Curvature; Velocity and Acceleration	167
118 Tortuosity of a Curve, and Various Forms of Expansion ...	169
119 [<i>Feb. 12, 1892.</i>] Hamilton's Finite Differentials Inconvenient and Unnecessary	172
120 Determination of Possibility of Existence of Differential Coefficients	174
121 Variation of the Size and Ort of a Vector	176
122 [<i>March 4, 1892.</i>] Preliminary on ∇ . Axial Differentiation. Differentiation referred to Moving Matter	178
123 Motion of a Rigid Body. Resolution of a Spin into other Spins	180
124 Motion of Systems of Displacement, &c.	183
125 Motion of a Strain-Figure	185
126 [<i>March 25, 1892.</i>] Space-Variation or Slope ∇P of a Scalar Function	186
127 Scalar Product ∇D . The Theorem of Divergence	188
128 Extension of the Theorem of Divergence	190
129 Vector Product $\nabla \nabla \mathbf{E}$, or the Curl of a Vector. The Theorem of Version, and its Extension	191
130 [<i>April 8, 1892.</i>] Five Examples of the Operation of ∇ in Transforming from Surface to Volume Summations... .. .	194
131 Five Examples of the Operation of ∇ in Transforming from Circuital to Surface Summations	197
132 Nine Examples of the Differentiating Effects of ∇	199
133 [<i>May 13, 1892.</i>] The Potential of a Scalar or Vector. The Characteristic Equation of a Potential, and its Solution ...	202
134 Connections of Potential, Curl, Divergence, and Slope. Separation of a Vector into Circuital and Divergent Parts. A Series of Circuital Vectors	206
135 [<i>May 27, 1892.</i>] A Series of Divergent Vectors	209
136 The Operation inverse to Divergence	212
137 The Operation inverse to Slope	213
138 The Operation inverse to Curl	214
139 Remarks on the Inverse Operations	215
140 Integration "by parts." Energy Equivalences in the Circuital Series	216

CONTENTS.

SECTION.	PAGE.
141 [June 10, 1892.] Energy and other Equivalences in the Divergent Series	217
142 The Isotropic Elastic Solid. Relation of Displacement to Force through the Potential	219
143 The Stored Energy and the Stress in the Elastic Solid. The Forceless and Torqueless Stress	221
144 Other Forms for the Displacement in terms of the Applied Force	224
145 [June 24, 1892.] The Elastic Solid generalised to include Elastic, Dissipative and Inertial Resistance to Translation, Rotation, Expansion, and Distortion	226
146 Electromagnetic and Elastic Solid Comparisons. First Example: Magnetic Force compared with Velocity in an Incompressible Solid with Distortional Elasticity	232
147 Second Example: Same as last, but Electric Force compared with Velocity	234
148 [July 15, 1892.] Third Example: A Conducting Dielectric compared with a Viscous Solid. Failure	234
149 Fourth Example: A Pure Conductor compared with a Viscous Liquid. Useful Analogy	236
150 Fifth Example: Modification of the Second and Fourth	239
151 Sixth Example: A Conducting Dielectric compared with an Elastic Solid with Translational Friction	240
152 Seventh Example: Improvement of the Sixth	240
153 Eighth Example: A Dielectric with Duplex Conductivity compared with an Elastic Solid with Translational Elasticity and Friction. The singular Distortionless Case	241
153A [July 29, 1892.] The Rotational Ether, Compressible or Incompressible	243
154 First Rotational Analogy: Magnetic Force compared with Velocity	245
155 Circuital Indeterminateness of the Flux of Energy in general	247
156 Second Rotational Analogy: Induction compared with Velocity	249
157 [Aug. 5, 1892.] Probability of the Kinetic Nature of Magnetic Energy	250
158 Unintelligibility of the Rotational Analogue for a Conducting Dielectric when Magnetic Energy is Kinetic	252
159 The Rotational Analogy, with Electric Energy Kinetic, extended to a Conducting Dielectric by means of Translational Friction	253
160 [Sept. 2, 1892.] Symmetrical Linear Operators, direct and inverse, referred to the Principal Axes	256
161 Geometrical Illustrations. The Sphere and Ellipsoid. Inverse Perpendiculars and Maccullagh's Theorem	259
162 Internal Structure of Linear Operators. Manipulation of several when Principal Axes are Parallel	262

CONTENTS.

SECTION.	PAGE.
163 [Sept. 16, 1892.] Theory of Displacement in an Eolotropic Dielectric. The Solution for a Point-Source... ..	264
164 Theory of the Relative Motion of Electrification and the Medium. The Solution for a Point-Source in steady Rectilinear Motion. The Equilibrium Surfaces in general ...	269
165 [Sept. 30, 1892.] Theory of the Relative Motion of Magnetification and the Medium	274
166 Theory of the Relative Motion of Magnetisation and the Medium. Increased Induction as well as Eolotropic Disturbance	277
167 [Oct. 21, 1892.] Theory of the Relative Motion of Electric Currents and the Medium	281
168 The General Linear Operator	283
169 The Dyadical Structure of Linear Operators	285
170 Hamilton's Theorem	287
171 [Nov. 18, 1892.] Hamilton's Cubic and the Invariants concerned	289
172 The Inversion of Linear Operators	293
173 Vector Product of a Vector and a Dyadic. The Differentiation of Linear Operators	295
174 [Dec. 9, 1892.] Summary of Method of Vector Analysis ...	297
175 Unsuitability of Quaternions for Physical Needs. Axiom :— Once a Vector, always a Vector	301

CHAPTER IV.

THEORY OF PLANE ELECTROMAGNETIC WAVES.

(Pages 306 to 466.)

SECTION.	PAGE.
176 [Dec. 30, 1892.] Action at a Distance <i>versus</i> Intermediate Agency. Contrast of New with Old Views about Electricity	306
177 General Notions about Electromagnetic Waves. Generation of Spherical Waves and Steady States	310
178 [Jan. 6, 1893.] Intermittent Source producing Steady States and Electromagnetic Sheets. A Train of S.H. Waves ...	314
179 Self-contained Forced Electromagnetic Vibrations. Contrast with Static Problem	316
180 Relations between E and H in a Pure Wave. Effect of Self-Induction. Futility of Mr. Preece's "KR law"	320
181 [Jan. 27, 1893.] Wave-Fronts ; their Initiation and Progress	321
182 Effect of a Non-Conducting Obstacle on Waves. Also of a Heterogeneous Medium	323
183 Effect of Eolotropy. Optical Wave-Surfaces. Electromagnetic versus Elastic Solid Theories	325
184 A Perfect Conductor is a Perfect Obstructor, but does not absorb the Energy of Electromagnetic Waves	328

CONTENTS.

SECTION.	PAGE.
185 [Feb. 24, 1893.] Conductors at Low Temperatures	330
186 Equilibrium of Radiation. The Mean Flux of Energy ...	331
187 The Mean Pressure of Radiation	334
188 Emissivity and Temperature	335
189 [March 10, 1893.] Internal Obstruction and Superficial Con- duction	337
190 The Effect of a Perfect Conductor on External Disturbances. Reflection and Conduction of Waves	340
191 [March 24, 1893.] The Effect of Conducting Matter in Diverting External Induction	344
192 Parenthetical Remarks on Induction, Magnetisation, Induc- tivity and Susceptibility	349
193 [April 7, 1893.] Effect of a Thin Plane Conducting Sheet on a Wave. Persistence of Induction and Loss of Displacement	353
194 The Persistence of Induction in Plane Strata, and in general. Also in Cores and in Linear Circuits	357
195 [April 21, 1893.] The Laws of Attenuation of Total Displace- ment and Total Induction by Electric and Magnetic Conduc- tance	360
196 The Laws of Attenuation at the Front of a Wave, due to Electric and Magnetic Conductance	364
197 The Simple Propagation of Waves in a Distortionless Con- ducting Medium	366
198 [May 5, 1893.] The Transformation by Conduction of an Elastic Wave to a Wave of Diffusion. Generation of Tails. Distinct Effects of Electric and Magnetic Conductance ...	369
199 Application to Waves along Straight Wires	374
200 [May 26, 1893.] Transformation of Variables from Electric and Magnetic Force to Voltage and Gaussage	378
201 Transformation of the Circuital Equations to the Forms in- volving Voltage and Gaussage	381
202 [June 9, 1893.] The Second Circuital Equation for Wires in Terms of V and C when Penetration is Instantaneous ...	386
203 The Second Circuital Equation when Penetration is Not In- stantaneous. Resistance Operators, and their Definite Meaning	390
204 Simply Periodic Waves Easily Treated in Case of Imperfect Penetration	393
205 [July 7, 1893.] Long Waves and Short Waves. Identity of Speed of Free and Guided Waves	395
206 The Guidance of Waves. Usually Two Guides. One sufficient, though with Loss. Possibility of Guidance within a Single Tube	399
207 Interpretation of Intermediate or Terminal Conditions in the Exact Theory	401
208 [Aug. 25, 1893.] The Spreading of Charge and Current in a long Circuit, and their Attenuation	403

CONTENTS.

SECTION.	PAGE.
209 The Distortionless Circuit. No limiting Distance set by it when the Attenuation is ignored	409
210 [<i>Sept. 15, 1893.</i>] The two Extreme Kinds of Diffusion in one Theory	411
211 The Effect of varying the Four Line-Constants as regards Distortion and Attenuation	413
212 The Beneficial Effect of Leakage in Submarine Cables... ..	417
213 [<i>Oct. 6, 1893.</i>] Short History of Leakage Effects on a Cable Circuit	420
214 Explanation of Anomalous Effects. Artificial Leaks	424
215 [<i>Oct. 20, 1893.</i>] Self-Induction imparts Momentum to Waves, and that carries them on. Analogy with a Flexible Cord	429
216 Self-Induction combined with Leaks. The Bridge System of Mr. A. W. Heaviside, and suggested Distortionless Circuit	433
217 [<i>Nov. 3, 1893.</i>] Evidence in favour of Self-Induction. Condition of First-Class Telephony. Importance of the Magnetic Reactance... ..	437
218 Various ways, good and bad, of increasing the Inductance of Circuits	441
219 [<i>Nov. 17, 1893.</i>] Effective Resistance and Inductance of a Combination when regarded as a Coil, and Effective Conductance and Permittance when regarded as a Condenser	446
220 Inductive Leaks applied to Submarine Cables	447
221 General Theory of Transmission of Waves along a Circuit with or without Auxiliary Devices	449
222 Application of above Theory to Inductive Leakage	453

APPENDIX B.

A GRAVITATIONAL AND ELECTROMAGNETIC ANALOGY.

Part I. [<i>July 14, 1893.</i>]... ..	455
Part II. [<i>Aug. 4, 1893.</i>]... ..	463
APPENDIX B'.	469
