

CONTENTS OF VOLUME III.

[The dates within brackets are the dates of first publication, or of printing. All up to p. 158 was published in "The Electrician"; the rest of the articles in the Journals indicated; but if only printed at the dates given, they are now first published, 1912.]

CHAPTER IX.

WAVES FROM MOVING SOURCES.

(Pages 1 to 130.)

SECTION	PAGE
450 [Feb. 23, 1900.] Adagio. Andante. Allegro moderato ...	1
451 [Feb. 23, 1900.] Simple Proof of Fundamental Property of a Plane Wave	3
452 [Feb. 23, 1900.] The General Plane Wave	4
453 [Feb. 23, 1900.] Generation of Waves by a Plane Source of Induction	6
454 [Feb. 23, 1900.] Generation of Waves by a Plane Source of Displacement	8
455 [Feb. 23, 1900.] Comparison of Electromagnetic with Aerial Waves	9
456 [March 23, 1900.] Waves ending perpendicularly upon a Conductor. Conduction and Convection	10
457 [March 23, 1900.] Oblique Reflection at a Conducting Surface with H tangential. Transformation to a Convection Problem	13
458 [March 23, 1900.] Generation of a Pair of Inclined Plane Waves by Motion of an Electrified Strip, $u > v$. The applied force required	15
459 [March 23, 1900.] Generation of a Pair of Inclined Plane Waves by a Moving Source of Induction, when $u > v$...	18
460 [April 20, 1900.] Two ways of Dividing a Pair of Crossing Pure Plane Waves to make Convection Problems, $u > v$...	18
461 [April 20, 1900.] Slanting Plane Waves generated by a Moving Magnet, and by an Electrified Strip moving normally to its Plane... .. .	20
462 [April 20, 1900.] Generation of a Single Plane Wave by Motion of an Electrified Electret. Also of Two separated Plane Waves	23

SECTION	PAGE
463 [June 8, 1900.] Theory of the Steady Rectilinear Motion of a Point-Charge or "Electron" through the Ether when $u < v$ and when $u > v$	25
464 [June 8, 1900.] Construction of the Slanting Plane Waves generated by an Electrified Line by means of the Potential of an Electron	28
465 [June 8, 1900.] The steady Rectilinear Motion in its own Line of a Terminated Electrified Line when $u > v$, and interpretation of the Impure Conical Wave following an Electron	30
466 [July 13, 1900.] The Wave from a Straight Line Source of Induction in a Non-conducting Dielectric	33
467 [July 13, 1900.] The Wave from a Straight Line Source of Induction in a Conductor	37
468 [July 13, 1900.] The Waves due to a Growing Plane Sheet of Sources of Induction, and to Travelling Filaments, at any Speed	39
469 [Aug. 17, 1900.] Reversion to Divergent Plane Waves. Is the Ether Fixed?	43
470 [Aug. 17, 1900.] Drag of Matter upon Ether. Modified Circuital Equations, and the Wave-speed resulting	44
471 [Aug. 17, 1900.] Comparison of Wave-speeds in Special Cases	46
472 [Aug. 17, 1900.] Effect of Modified Circuital Equations on Electrical Distributions	50
473 [Oct. 5, 1900.] Lorentz's Equations of a Moving Dielectric ...	52
474 [Oct. 5, 1900.] The Wave-speed according to Lorentz ...	55
475 [Oct. 5, 1900.] Possible Equations for a Moving Magnetised Substance	57
476 [Oct. 5, 1900.] Larmor's Equations for a Moving Body ...	59
477 [Nov. 2, 1900.] Theory of Moving Electrified Cones; $u > v$. The Moving Force upon them and upon an Electrified Line	61
478 [Nov. 2, 1900.] Theory of an Electrified Line of Finite Length moving Transversely, $u > v$	65
479 [Nov. 30, 1900.] Motion of Electrified Hyperboloids, $u > v$...	69
480 [Nov. 30, 1900.] Growing Plane Source of Induction. Transition from $u > v$ to $u < v$	72
481 [Nov. 30, 1900.] The Waves from a Plane Strip Source of Induction suddenly started	76
482 [Jan. 18, 1901.] Impressed Current along a Straight Axis. The Operational Solution in General	78
483 [Jan. 18, 1901.] Algebrisation of the Operational Solution in the case of Steady Motion of an Electron or of an Electrified Line, $u > v$	81

CONTENTS.

VII.

SECTION	PAGE
484 [Jan. 18, 1901.] Application of Simply Periodic Analysis. The Transition from $u <$ to $u > v$	84
485 [March 29, 1901.] Train of Simply Periodic Forced Waves along an Axis. The Work done and Waste of Energy ...	86
486 [March 29, 1901.] Construction of the Simply Periodic Wave Train from the Two Electronic Steady Solutions... ..	90
487 [March 29, 1901.] Connection between Moving Electrifica- tion and Moving Electrification. Transition from Cylindrical to Conical Wave... .. .	92
488 [May 10, 1901.] Spherical Impulsive Wave due to Sudden Displacement of an Electron	95
489 [May 10, 1901.] Spherical Impulse due to Sudden Change of Velocity of an Electron. Röntgen Rays	98
490 [May 10, 1901.] Wave Train due to Damped Vibrations ...	100
491 [May 10, 1901.] Investigation of the Electromagnetic Field due to an Impressed Electric Current growing in a Straight Line. The Solutions in Sphere and Cone	102
492 [Aug. 9, 1901.] The Ellipsoidal and Conical Equipotential Surfaces	105
493 [Aug. 9, 1901.] The Magnetic Force and Electric Current in the Cone and Sphere. The Spherical Current Sheet ...	107
494 [Aug. 9, 1901.] The Manner of Continuity of the Electric Current	110
495 [Aug. 9, 1901.] The Electric Force, and Time Integral of Magnetic Force	112
496 [Oct. 11, 1901.] The Distribution of Displacement	114
497 [Oct. 11, 1901.] Solutions for an Electron Jerked Away from a Stationary Compensating Charge. The Spherical Pulse	117
498 [Oct. 11, 1901.] Solutions for a Jerked Electron Without Compensating Charge	120
499 [Nov. 29, 1901.] Comparison of Two Cases of Motion of Electrification at the Speed of Light	122
500 [Nov. 29, 1901.] Peculiarities at the Speed of Light ...	125
501 [Nov. 29, 1901.] The Energy Wasted in the Spherical Pulse from a Jerked Electron, and the Energy left behind ...	127
502 [Nov. 29, 1901.] The Potential of a Charged Spheroid mov- ing along its Axis	129

APPENDIX J.

[April 4, 1902.] NOTE ON THE SIZE AND INERTIA OF ELECTRONS	131
--	-----

APPENDIX K.

[March 21, 1902.] VECTOR ANALYSIS	135
--	-----

CHAPTER X.

WAVES IN THE ETHER.

(Pages 144 to 519.)

SECTION	PAGE
503 [Feb. 14, 1902.] Matter, Electricity, Ether and the Pressure of Radiation	144
504 [Feb. 14, 1902.] The Moving Force Acting on a Deformable Ether	146
505 [Feb. 14, 1902.] How to have Constant Speed through Space of Plane Radiation Traversing a Moving Compressible Ether	149
506 [June 6, 1902.] Connection Between the Compressed Electromagnetic Wave and Rankine's Wave of Compression...	152
507 [June 6, 1902.] Theory of the Rankinian Wave of Compression	154
508 [June 6, 1902.] Crossing of Two Waves. Riemann's Solution	155
509 [June 6, 1902.] Modification of the Rankinian to make a Compressed Maxwellian Wave	156
510 [Nature, Oct. 30, 1902.] The Waste of Energy from a Moving Electron	158
511 [Nature, Jan. 1, 1903.] Sound Waves and Electromagnetics. The Pan-potential	164
512 [Nature, Jan. 28, 1904.] The Radiation from an Electron describing a Circular Orbit	169
513 [Nature, Feb. 11, 1904.] The Radiation from an Electron moving in an Elliptic, or any other Orbit	173
514 [Nature, Jan. 29, 1903.] The Principle of Least Action. Lagrange's Equations	175
515 [Nature, Feb. 19, 1903.] The Principle of Activity and Lagrange's Equations. Rotation of a Rigid Body ...	178
516 [Nature, May 21, 1903.] The Undistorted Cylindrical Wave	180
517 [Nature, May 28, 1903.] Extension of Kelvin's Thermoelectric Theory	183
518 [Nature, March 9, 1905.] The Pressure of Radiation ...	186
519 [Nature, April 27, 1905.] Electromagnetics in a Moving Dielectric	190
520 [Electrician, Dec. 23, 1904.] The Charging of a Cable through a Condenser and Resistance... ..	194
521 [1905.] Other Critical Cases. Mathematical Excursion ...	205
522 [1905.] The Curbing Effect of an Inductance Shunt... ..	209
523 [Nature, Aug. 31, 1905.] The Transverse Momentum of an Electron	211
524 [1905.] Extension to Helical Motion	213
525 [1906.] Deep-water Waves	214
526 [1906.] The Solution of Definite Integrals by Differential Transformation	234

CONTENTS.

IX.

SECTION	PAGE
527 [1907.] Given the Effect, Find the Cause. The Inversion of Operations	291
528 [<i>Ency. Brit., 10th Ed., June, 1902.</i>] Theory of Electric Telegraphy	331
529 [1907.] Some Plane and Cylindrical Waves	346
530 [1907.] Plane Waves in a Dielectric Loaded in a Certain Way	383
531 [1908.] The Generation of Spherical Pulses in an Elastic Solid	388
532 [1909.] Plane Waves in Moving Mediums. The Energy and Forces	401
533 [1909.] The Electromagnetic Circuital Equations and Connected Matter	422
534 [1910, 1911.] Theory of an Electric Charge in Variable Motion	432
535 [1911.] Slanting Motion of Electrified Straight Line... ..	498
536 [<i>Nature, Apr. 19, 1906.</i>] The Magnetic Inertia of a Charged Conductor in a Field of Force	502
537 [<i>Electrician, Sept., 1897.</i>] Boltzmann's Interpretation of Maxwell	503
538 [<i>Nature, April 6, 1893.</i>] Vectors versus Quaternions	507
539 [<i>Nature, Jan. 11, 1894.</i>] Quaternionic Innovations... ..	510
540 [<i>Nature, Oct. 4, 1900.</i>] The Teaching of Mathematics	513
541 [<i>Perry's book, 1901.</i>] The Teaching of Mathematics	515
542 [1912.] The Pan-potential as a Surface Integral	517
543 [1912.] Scientific Limitations on Human Knowledge	518
