|--|----|
| NOTE ON CONVENTIONS | xv |
| I. INTRODUCTION | |
| 1.1. The sum of a series | 1 |
| 1.2. Some calculations with divergent series | 2 |
| 1.3. First definitions | 5 |
| 1.4. Regularity of a method | 10 |
| 1.5. Divergent integrals and generalized limits of functions of a continuous variable | 10 |
| 1.6. Some historical remarks | 13 |
| 1.7. A note on the British analysts of the early nineteenth century | 18 |
| NOTES ON CHAPTER I | 21 |
| II. SOME HISTORICAL EXAMPLES | |
| 2.1. Introduction | 23 |
| A. <i>Euler and the functional equation of Riemann's zeta-function</i> | |
| 2.2. The functional equations for $\zeta(s)$, $\eta(s)$, and $L(s)$ | 23 |
| 2.3. Euler's verification | 24 |
| B. <i>Euler and the series $1 - 1!x + 2!x^2 - \dots$</i> | |
| 2.4. Summation of the series | 26 |
| 2.5. The asymptotic nature of the series | 27 |
| 2.6. Numerical computations | 28 |
| C. <i>Fourier and Fourier's theorem</i> | |
| 2.7. Fourier's theorem | 29 |
| 2.8. Fourier's first formula for the coefficients | 30 |
| 2.9. Other forms of the coefficients and the series | 33 |
| 2.10. The validity of Fourier's formulae | 34 |
| D. <i>Heaviside's exponential series</i> | |
| 2.11. Heaviside on divergent series | 36 |
| 2.12. The generalized exponential series | 37 |
| 2.13. The series $\sum \phi^{(r)}(x)$ | 38 |
| 2.14. The generalized binomial series | 39 |
| NOTES ON CHAPTER II | 39 |
| III. GENERAL THEOREMS | |
| 3.1. Generalities concerning linear transformations | 42 |
| 3.2. Regular transformations | 43 |
| 3.3. Proof of Theorems 1 and 2 | 44 |
| 3.4. Proof of Theorem 3 | 46 |
| 3.5. Variants and analogues | 49 |
| 3.6. Positive transformations | 52 |
| 3.7. Knopp's kernel theorem | 54 |
| 3.8. An application of Theorem 2 | 56 |
| 3.9. Dilution of series | 59 |
| NOTES ON CHAPTER III | 60 |

IV. SPECIAL METHODS OF SUMMATION

| | | |
|-------|---|----|
| 4.1. | Nörlund means | 64 |
| 4.2. | Regularity and consistency of Nörlund means | 64 |
| 4.3. | Inclusion | 66 |
| 4.4. | Equivalence | 67 |
| 4.5. | Another theorem concerning inclusion | 68 |
| 4.6. | Euler means | 70 |
| 4.7. | Abelian means | 71 |
| 4.8. | A theorem of inclusion for Abelian means | 73 |
| 4.9. | Complex methods | 76 |
| 4.10. | Summability of $1-1+1-\dots$ by special Abelian methods | 77 |
| 4.11. | Lindelöf's and Mittag-Leffler's methods | 77 |
| 4.12. | Means defined by integral functions | 79 |
| 4.13. | Moment constant methods | 81 |
| 4.14. | A theorem of consistency | 84 |
| 4.15. | Methods ineffective for the series $1-1+1-\dots$ | 85 |
| 4.16. | Riesz's typical means | 86 |
| 4.17. | Methods suggested by the theory of Fourier series | 87 |
| 4.18. | A general principle | 89 |
| | NOTES ON CHAPTER IV | 91 |

V. ARITHMETIC MEANS (1)

| | | |
|-------|---|-----|
| 5.1. | Introduction | 94 |
| 5.2. | Hölder's means | 94 |
| 5.3. | Simple theorems concerning Hölder summability | 95 |
| 5.4. | Cesàro means | 96 |
| 5.5. | Means of non-integral order | 97 |
| 5.6. | A theorem concerning integral resultants | 98 |
| 5.7. | Simple theorems concerning Cesàro summability | 100 |
| 5.8. | The equivalence theorem | 103 |
| 5.9. | Mercer's theorem and Schur's proof of the equivalence theorem | 104 |
| 5.10. | Other proofs of Mercer's theorem | 106 |
| 5.11. | Infinite limits | 107 |
| 5.12. | Cesàro and Abel summability | 108 |
| 5.13. | Cesàro means as Nörlund means | 109 |
| 5.14. | Integrals | 110 |
| 5.15. | Theorems concerning summable integrals | 111 |
| 5.16. | Riesz's arithmetic means | 112 |
| 5.17. | Uniformly distributed sequences | 115 |
| 5.18. | The uniform distribution of $\{n^2\alpha\}$ | 117 |
| | NOTES ON CHAPTER V | 118 |

VI. ARITHMETIC MEANS (2)

| | | |
|------|--|-----|
| 6.1. | Tauberian theorems for Cesàro summability | 121 |
| 6.2. | Slowly oscillating and slowly decreasing functions | 124 |
| 6.3. | Another Tauberian condition | 126 |
| 6.4. | Convexity theorems | 127 |

CONTENTS

xi

| | | |
|---|---|-----|
| 6.5. | Convergence factors | 128 |
| 6.6. | The factor $(n+1)^{-s}$ | 131 |
| 6.7. | Another condition for summability | 132 |
| 6.8. | Integrals | 135 |
| 6.9. | The binomial series | 136 |
| 6.10. | The series $\sum n^\alpha e^{n\theta}$ | 139 |
| 6.11. | The case $\beta = -1$ | 139 |
| 6.12. | The series $\sum n^{-b} e^{Ain^a}$ | 141 |
| | NOTES ON CHAPTER VI | 145 |
| VII. TAUBERIAN THEOREMS FOR POWER SERIES | | |
| 7.1. | Abelian and Tauberian theorems | 148 |
| 7.2. | Tauber's first theorem | 149 |
| 7.3. | Tauber's second theorem | 150 |
| 7.4. | Applications to general Dirichlet's series | 153 |
| 7.5. | The deeper Tauberian theorems | 153 |
| 7.6. | Proof of Theorems 96 and 96 α | 156 |
| 7.7. | Proof of Theorems 91 and 91 α | 158 |
| 7.8. | Further remarks on the relations between the theorems of § 7.5. | 161 |
| 7.9. | The series $\sum n^{-1-\epsilon}$ | 163 |
| 7.10. | Slowly oscillating and slowly decreasing functions | 164 |
| 7.11. | Another generalization of Theorem 98 | 165 |
| 7.12. | The method of Hardy and Littlewood | 170 |
| 7.13. | The 'high indices' theorem | 172 |
| | NOTES ON CHAPTER VII | 175 |
| VIII. THE METHODS OF EULER AND BOREL (1) | | |
| 8.1. | Introduction | 178 |
| 8.2. | The (E, q) method | 178 |
| 8.3. | Simple properties of the (E, q) method | 179 |
| 8.4. | The formal relations between Euler's and Borel's methods | 181 |
| 8.5. | Borel's methods | 182 |
| 8.6. | Normal, absolute, and regular summability | 184 |
| 8.7. | Abelian theorems for Borel summability | 184 |
| 8.8. | Analytic continuation of a function regular at the origin: the polygon of summability | 186 |
| 8.9. | Series representing functions with a singular point at the origin | 189 |
| 8.10. | Analytic continuation by other methods | 190 |
| 8.11. | The summability of certain asymptotic series | 191 |
| | NOTES ON CHAPTER VIII | 195 |
| IX. THE METHODS OF EULER AND BOREL (2) | | |
| 9.1. | Some elementary lemmas | 200 |
| 9.2. | Proof of Theorem 137 | 201 |
| 9.3. | Proof of Theorem 139 | 204 |
| 9.4. | Another elementary lemma | 205 |
| 9.5. | Ostrowski's theorem on over-convergence | 206 |
| 9.6. | Tauberian theorems for Borel summability | 208 |

| | | |
|-----------------------------|---|-----|
| 9.7. | Tauberian theorems (<i>continued</i>) | 210 |
| 9.8. | Examples of series not summable (B) | 213 |
| 9.9. | A theorem in the opposite direction | 213 |
| 9.10. | The (e, c) method of summation | 214 |
| 9.11. | The circle method of summation | 218 |
| 9.12. | Further remarks on Theorems 150-5 | 219 |
| 9.13. | The principal Tauberian theorem | 220 |
| 9.14. | Generalizations | 222 |
| 9.15. | The series $\sum z^n$ | 222 |
| 9.16. | Valiron's methods | 223 |
| | NOTES ON CHAPTER IX | 224 |
| X. MULTIPLICATION OF SERIES | | |
| 10.1. | Formal rules for multiplication | 227 |
| 10.2. | The classical theorems for multiplication by Cauchy's rule | 227 |
| 10.3. | Multiplication of summable series | 228 |
| 10.4. | Another theorem concerning convergence | 230 |
| 10.5. | Further applications of Theorem 170 | 232 |
| 10.6. | Alternating series | 233 |
| 10.7. | Formal multiplication | 234 |
| 10.8. | Multiplication of integrals | 235 |
| 10.9. | Euler summability | 236 |
| 10.10. | Borel summability | 237 |
| 10.11. | Dirichlet multiplication | 239 |
| 10.12. | Series infinite in both directions | 239 |
| 10.13. | The analogues of Cauchy's and Mertens's theorems | 241 |
| 10.14. | Further theorems | 242 |
| 10.15. | The analogue of Abel's theorem | 244 |
| | NOTES ON CHAPTER X | 245 |
| XI. HAUSDORFF MEANS | | |
| 11.1. | The transformation δ | 247 |
| 11.2. | Expression of the (E, q) and $(C, 1)$ transformations in terms of δ | 248 |
| 11.3. | Hausdorff's general transformation | 249 |
| 11.4. | The general Hölder and Cesàro transformations as \mathfrak{H} transformations | 250 |
| 11.5. | Conditions for the regularity of a real Hausdorff transformation | 252 |
| 11.6. | Totally monotone sequences | 253 |
| 11.7. | Final form of the conditions for regularity | 255 |
| 11.8. | Moment constants | 256 |
| 11.9. | Hausdorff's theorem | 258 |
| 11.10. | Inclusion and equivalence of \mathfrak{H} methods | 262 |
| 11.11. | Mercer's theorem and the equivalence theorem for Hölder and Cesàro means | 263 |
| 11.12. | Some special cases | 266 |
| 11.13. | Logarithmic cases | 268 |
| 11.14. | Exponential cases | 269 |
| 11.15. | The Legendre series for $\chi(x)$ | 271 |

CONTENTS

xiii

| | | |
|--------|---|-----|
| 11.16. | The moment constants of functions of particular classes | 272 |
| 11.17. | An inequality for Hausdorff means | 273 |
| 11.18. | Continuous transformations | 275 |
| 11.19. | Quasi-Hausdorff transformations | 277 |
| 11.20. | Regularity of a quasi-Hausdorff transformation | 278 |
| 11.21. | Examples | 279 |
| | NOTES ON CHAPTER XI | 280 |

XII. WIENER'S TAUBERIAN THEOREMS

| | | |
|--------|---|-----|
| 12.1. | Introduction | 283 |
| 12.2. | Wiener's condition | 285 |
| 12.3. | Lemmas concerning Fourier transforms | 287 |
| 12.4. | Lemmas concerning the class U | 288 |
| 12.5. | Final lemmas | 290 |
| 12.6. | Proof of Theorems 221 and 220 | 292 |
| 12.7. | Wiener's second theorem | 294 |
| 12.8. | Theorems for the interval $(0, \infty)$ | 295 |
| 12.9. | Some special kernels | 297 |
| 12.10. | Application of the general theorems to some special kernels | 299 |
| 12.11. | Applications to the theory of primes | 303 |
| 12.12. | One-sided conditions | 304 |
| 12.13. | Vijayaraghavan's theorem | 305 |
| 12.14. | Proof of Theorem 238 | 308 |
| 12.15. | Borel summability | 312 |
| 12.16. | Summability $(R, 2)$ | 314 |
| | NOTES ON CHAPTER XII | 316 |

XIII. THE EULER-MACLAURIN SUM FORMULA

| | | |
|--------|---|-----|
| 13.1. | Introduction | 318 |
| 13.2. | The Bernoullian numbers and functions | 320 |
| 13.3. | The associated periodic functions | 321 |
| 13.4. | The signs of the functions $\phi_n(x)$ | 322 |
| 13.5. | The Euler-Maclaurin sum formula | 323 |
| 13.6. | Limits as $n \rightarrow \infty$ | 326 |
| 13.7. | The sign and magnitude of the remainder term | 327 |
| 13.8. | Poisson's proof of the Euler-Maclaurin formula | 330 |
| 13.9. | A formula of Fourier | 331 |
| 13.10. | The case $f(x) = x^{-s}$ and the Riemann zeta-function | 332 |
| 13.11. | The case $f(x) = \log(x+c)$ and Stirling's theorem | 333 |
| 13.12. | Generalization of the formulae | 335 |
| 13.13. | Other formulae for C | 336 |
| 13.14. | Investigation of the Euler-Maclaurin formula by complex integration | 339 |
| 13.15. | Summability of the Euler-Maclaurin series | 341 |
| 13.16. | Additional remarks | 345 |
| 13.17. | The \mathfrak{R} definition of the sum of a divergent series | 346 |
| | NOTES ON CHAPTER XIII | 347 |

| | |
|---|-----|
| APPENDIX I. ON THE EVALUATION OF CERTAIN DEFINITE INTEGRALS BY MEANS OF DIVERGENT SERIES | 349 |
| APPENDIX II. THE FOURIER KERNELS OF CERTAIN METHODS OF SUM- MATION | 359 |
| APPENDIX III. ON RIEMANN AND ABEL SUMMABILITY | 365 |
| APPENDIX IV. ON LAMBERT AND INGHAM SUMMABILITY | 372 |
| APPENDIX V. TWO THEOREMS OF M. L. CARTWRIGHT | 381 |
| LIST OF BOOKS | 387 |
| LIST OF PERIODICALS | 389 |
| LIST OF AUTHORS | 390 |
| LIST OF DEFINITIONS | 392 |
| GENERAL INDEX | 394 |
