GENERAL PREFACE	v
PREFACE	vii

Part I General Valuation Theory

Chapter 1

VALUATIONS OF A FIELD

1. Equivalent Valuations	3
2. The Topology Induced by a Valuation	5
3. Classification of Valuations	6
4. The Approximation Theorem	8
5. Examples	10
6. Completion of a Field	17

Chapter 2

COMPLETE FIELDS

1. Normed Linear Spaces	19
2. Extension of the Valuation	21
3. Archimedean Case	24
4. The Non-Archimedean Case	28
5. Newton's Polygon	37
6. The Algebraic Closure of a Complete Field	43
7. Convergent Power Series	47

Chapter 3

e, f AND n

1. The Ramification and Residue Class Degree	53
2. The Discrete Case	56
3. The General Case	60

Chapter 4

RAMIFICATION THEORY

1. Unramified Extensions	64
2. Tamely Ramified Extensions	67
3. Characters of Abelian Groups	71
4. The Inertia Group and Ramification Group	72
5. Higher Ramification Groups	77
6. Ramification Theory in the Discrete Case	82

Chapter 5

THE DIFFERENT

1. The Inverse Different	86
2. Complementary Bases	89
3. Fields with Separable Residue Class Field	93
4. The Ramification Groups of a Subfield	95

Part II Local Class Field Theory

Chapter 6

PREPARATIONS FOR LOCAL CLASS FIELD THEORY

1. Galois Theory for Infinite Extensions	103
2. Group Extensions	108
3. Galois Cohomology Theory	114
4. Continuous Cocycles	117

Chapter 7

THE FIRST AND SECOND INEQUALITIES

1. Introduction	127
2. Unramified Extensions	127
3. The First Inequality	130
4. The Second Inequality: A Reduction Step	133
5. The Second Inequality Concluded	135

Chapter 8

THE NORM RESIDUE SYMBOL

1. The Temporary Symbol $(c, K k/\tau)$	144
2. Choice of a Standard Generator c	153
3. The Norm Residue Symbol for Finite Extensions	158

Chapter 9

THE EXISTENCE THEOREM

1. Introduction	165
2. The Infinite Product Space \bar{I}	165
3. The New Topology in k^*	170
4. The Norm Group and Norm Residue Symbol for Infinite Extensions	174
5. Extension Fields with Degree Equal to the Characteristic	180
6. The Existence Theorem	181
7. Uniqueness of the Norm Residue Symbol	187

Chapter 10

APPLICATIONS AND ILLUSTRATIONS

1. Fields with Perfect Residue Class Field	190
2. The Norm Residue Symbol for Certain Power Series Fields	193
3. Differentials in an Arbitrary Power Series Field	200
4. The Conductor and Different for Cyclic p -Extensions	203
5. The Rational p -adic Field	206
6. Computation of the Index $(\alpha : \alpha^n)$	209

Part III**Product Formula and Function Fields in One Variable**

Chapter 11

PREPARATIONS FOR THE GLOBAL THEORY

1. The Radical of a Ring	215
2. Kronecker Products of Spaces and Rings	216
3. Composite Extensions	218
4. Extension of the Valuation of a Non-Complete Field	223

Chapter 12

CHARACTERIZATION OF FIELDS BY THE PRODUCT FORMULA

1. PF -Fields.	225
2. Upper Bound for the Order of a Paralleloptope	227
3. Description of all PF -Fields	230
4. Finite Extensions of PF -Fields	235

Chapter 13

DIFFERENTIALS IN PF -FIELDS

1. Valuation Vectors, Ideles, and Divisors	238
2. Valuation Vectors in an Extension Field	241
3. Some Results on Vector Spaces	244
4. Differentials in the Rational Subfield of a PF -Field	245
5. Differentials in a PF -Field	251
6. The Different	255

Chapter 14

THE RIEMANN-ROCH THEOREM

1. Parallelotopes in a Function Field	260
2. First Proof	262
3. Second Proof	265

Chapter 15

CONSTANT FIELD EXTENSIONS

1. The Effective Degree	271
2. Divisors in an Extension Field	278
3. Finite Algebraic Constant Field Extensions	279
4. The Genus in a Purely Transcendental Constant Field Extension	284
5. The Genus in an Arbitrary Constant Field Extension	287

Chapter 16

APPLICATIONS OF THE RIEMANN-ROCH THEOREM

1. Places and Valuation Rings	293
2. Algebraic Curves	297
3. Linear Series	300
4. Fields of Genus Zero	302
5. Elliptic Fields	306
6. The Curve of Degree n	311
7. Hyperelliptic Fields	312
8. The Theorem of Clifford	317

Chapter 17

DIFFERENTIALS IN FUNCTION FIELDS

1. Preparations	321
2. Local Components of Differentials	322
3. Differentials and Derivatives in Function Fields	324
4. Differentials of the First Kind	329

Appendix

THEOREMS ON p -GROUPS AND SYLOW GROUPS

1. S -Equivalence Classes	334
2. Theorems About p -Groups	335
3. The Existence of Sylow Subgroups	336
4. Theorems About Sylow Subgroups	337
INDEX OF SYMBOLS	339
SUBJECT INDEX	343
