Preface to the Second Edition 9

Preface 11

		Problems	Hints	Solutions
§ 1.	**Basic enumeration** (partitions of sets and numbers, recurrence relations and generating functions, combinatorial identities)	15	109	161
§ 2.	**The sieve** (inclusion-exclusion, Selberg sieve, second moment method, Möbius function)	22	113	200
§ 3.	**Permutations** (cycle index polynomial, Hall-Rényi coding, Pólya-Redfield method)	29	116	225
§ 4.	**Two classical enumeration problems in graph theory** (labelled and unlabelled trees, spanning trees of a graph; 1-factors, the Ising problem, restricted permutations)	33	118	246
§ 5.	**Parity and duality** (Eulerian graphs, planar duality, Sperner's Lemma, the linear space of cuts and cycles, planarity criteria)	40	122	281
§ 6.	**Connectivity** (trees, ear-structures, Menger's Theorem, a calculus of cutsets, flow theory)	45	124	303
§ 7.	**Factors of graphs** (König's Theorem, Tutte's Theorem, the structure of factors of graphs, realizability of degree sequences)	55	130	341
§ 8.	**Independent sets of points** (kernel, games on graphs, α-critical graphs)	62	133	380
§ 9.	**Chromatic number** (degree conditions, potential, Hajós' construction, χ-critical graphs, perfect graphs, chromatic polynomial, planar graphs)	65	135	392
§ 10.	**Extremal problems for graphs** (girth, degree, and disjoint circuits; existence of subdivisions, paths and Hamiltonian circuits; Turán's Theorem)	72	138	422

§ 11. **Spectra of graphs and random walks** (relations to the structure and automorphism group, strongly regular graphs, conductance, resistance, expanding graphs, random walks) 78 142 452
§ 12. **Automorphisms of graphs** (Frucht's Theorem, transitive groups, topological problems, endomorphisms) 87 147 493
§ 13. **Hypergraphs** (circuits, transversal theory, intersection properties and extremal problems, 2-colorability, integral and fractional packing and covering, normal hypergraphs and perfect graphs) 90 148 512
§ 14. **Ramsey Theory** (Ramsey's Theorem, monochromatic paths and circuits in graphs, geometric configurations, Van der Waerden's Theorem, monotonicity and convexity) 98 153 552
§ 15. **Reconstruction** (line-graphs, the Reconstruction Conjecture, cancellation property of products) 103 156 581
