Preface to the New Edition	v
Preface	vii
Preliminaries	1
1. Idèles and Idèle Classes	1
2. Cohomology	3
3. The Herbrand Quotient	5
4. Local Class Field Theory	8
Chapter V. The First Fundamental Inequality	11
1. Statement of the First Inequality	11
2. First Inequality in Function Fields	11
3. First Inequality in Global Fields	13
4. Consequences of the First Inequality	16
Chapter VI. Second Fundamental Inequality	19
1. Statement and Consequences of the Inequality	19
2. Kummer Theory	21
3. Proof in Kummer Fields of Prime Degree	24
4. Proof in p -extensions	27
5. Infinite Divisibility of the Universal Norms	32
6. Sketch of the Analytic Proof of the Second Inequality	33
Chapter VII. Reciprocity Law	35
1. Introduction	35
2. Reciprocity Law over the Rationals	36
3. Reciprocity Law	41
4. Higher Cohomology Groups in Global Fields	52
Chapter VIII. The Existence Theorem	55
1. Existence and Ramification Theorem	55
2. Number Fields	56
3. Function Fields	59
4. Decomposition Laws and Arithmetic Progressions	62
Chapter IX. Connected Component of Idèle Classes	65
1. Structure of the Connected Component	65
2. Cohomology of the Connected Component	70
Chapter X. The Grunwald–Wang Theorem	73
1. Interconnection between Local and Global m -th Powers	73

2. Abelian Fields with Given Local Behavior	76
3. Cyclic Extensions	81
Chapter XI. Higher Ramification Theory	83
1. Higher Ramification Groups	83
2. Ramification Groups of a Subfield	86
3. The General Residue Class Field	90
4. General Local Class Field Theory	92
5. The Conductor	99
Appendix: Induced Characters	104
Chapter XII. Explicit Reciprocity Laws	109
1. Formalism of the Power Residue Symbol	109
2. Local Analysis	111
3. Computation of the Norm Residue Symbol in Certain Local Kummer Fields	114
4. The Power Reciprocity Law	122
Chapter XIII. Group Extensions	127
1. Homomorphisms of Group Extensions	127
2. Commutators and Transfer in Group Extensions	131
3. The Akizuki–Witt Map $v: H^2(G, A) \rightarrow H^2(G/H, A^H)$	134
4. Splitting Modules and the Principal Ideal Theorem	137
Chapter XIV. Abstract Class Field Theory	143
1. Formations	143
2. Field Formations. The Brauer Groups	146
3. Class Formations; Method of Establishing Axioms	150
4. The Main Theorem	154
Exercise	157
5. The Reciprocity Law Isomorphism	158
6. The Abstract Existence Theorem	163
Chapter XV. Weil Groups	167
Bibliography	191
