Contents

Preface to the AMS Chelsea Edition v

Preface vii

Chapter 0. Notations and Conventions 1

Chapter 1. Calculus of L^2 Derivatives—Local Properties 3

Chapter 2. Calculus of L^2 Derivatives—Global Properties 11

Chapter 3. Some Inequalities 17

Chapter 4. Elliptic Operators 33

Chapter 5. Local Existence Theory 35

Chapter 6. Local Regularity of Solutions of Elliptic Systems 39

Chapter 7. Gårding's Inequality 53

Chapter 8. Global Existence 65

Chapter 9. Global Regularity of Solutions of Strongly Elliptic Equations 75

Chapter 10. Coerciveness 95

Chapter 11. Coerciveness Results of Aronszajn and Smith 107

Chapter 12. Some Results on Linear Transformations on a Hilbert Space 125
Part 1. Elementary spectral theory 125
Part 2. Operators of finite double-norm on an abstract Hilbert space 132
Part 3. Hilbert-Schmidt kernels 142

Chapter 13. Spectral Theory of Abstract Operators 147

Chapter 14. Eigenvalue Problems for Elliptic Equations; The Self-Adjoint Case 163
Part 1. Preliminary results on fundamental solutions 163
Part 2. Eigenvalue problems for elliptic equations 168

Chapter 15. Non-Self-Adjoint Eigenvalue Problems 185

Chapter 16. Completeness of the Eigenfunctions 197

Bibliography 205
