Translator's Note	<u>v</u>
Foreword to the First Russian Edition	<u>vii</u>
Foreword to the Second Russian Edition	<u>xi</u>
Chapter I	
Definition and Simplest Properties of Generalized Functions	<u>1</u>
1. Test Functions and Generalized Functions	<u>1</u>
1.1. Introductory Remarks	<u>1</u>
1.2. Test Functions	<u>2</u>
1.3. Generalized Functions	<u>3</u>
1.4. Local Properties of Generalized Functions	<u>5</u>
1.5. Addition and Multiplication by a Number and by a Function	<u>7</u>
1.6. Translations, Rotations, and Other Linear Transforma- tions on the Independent Variables	<u>8</u>
1.7. Regularization of Divergent Integrals	<u>10</u>
1.8. Convergence of Generalized Function Sequences	<u>13</u>
1.9. Complex Test Functions and Generalized Functions	<u>15</u>
1.10. Other Test-Function Spaces	<u>16</u>
2. Differentiation and Integration of Generalized Functions	<u>18</u>
2.1. Fundamental Definitions	<u>18</u>
2.2. Examples for the Case of a Single Variable	<u>21</u>
2.3. Examples for the Case of Several Variables	<u>27</u>
2.4. Differentiation as a Continuous Operation	<u>29</u>
2.5. Delta-Convergent Sequences	<u>34</u>
2.6. Differential Equations for Generalized Functions	<u>39</u>
2.7. Differentiation in S	<u>44</u>
3. Regularization of Functions with Algebraic Singularities	<u>45</u>
3.1. Statement of the Problem	<u>45</u>
3.2. The Generalized Functions x_+^λ and x_-^λ	<u>48</u>
3.3. Even and Odd Combinations of x_+^λ and x_-^λ	<u>50</u>

3.4. Indefinite Integrals of $x_+^\lambda, x_-^\lambda, x ^\lambda \operatorname{sgn} x$	<u>54</u>
3.5. Normalization of $x_+^\lambda, x_-^\lambda, x ^\lambda \operatorname{sgn} x$	<u>55</u>
3.6. The Generalized Functions $(x + i0)^\lambda$ and $(x - i0)^\lambda$	<u>59</u>
3.7. Canonical Regularization	<u>61</u>
3.8. Regularization of Other Integrals	<u>65</u>
3.9. The Generalized Function r^λ	<u>71</u>
3.10. Plane-Wave Expansion of r^λ	<u>74</u>
3.10. Homogeneous Functions	<u>78</u>
4. Associate Functions	<u>82</u>
4.1. Definition	<u>82</u>
4.2. Taylor's and Laurent Series for x_+^λ and x_-^λ	<u>84</u>
4.3. Expansion of $ x ^\lambda$ and $ x ^\lambda \operatorname{sgn} x$	<u>89</u>
4.4. The Generalized Functions $(x + i0)^\lambda$ and $(x - i0)^\lambda$	<u>93</u>
4.5. Taylor's Series for $(x + i0)^\lambda$ and $(x - i0)^\lambda$	<u>96</u>
4.6. Expansion of r^λ	<u>98</u>
5. Convolutions of Generalized Functions	<u>100</u>
5.1. Direct Product of Generalized Functions	<u>100</u>
5.2. Convolutions of Generalized Functions	<u>103</u>
5.3. Newtonian Gravitational Potential and Elementary Solutions of Differential Equations	<u>106</u>
5.4. Poisson's Integral and Elementary Solutions of Cauchy's Problem	<u>109</u>
5.5. Integrals and Derivatives of Higher Orders	<u>115</u>
6. Elementary Solutions of Differential Equations with Constant Coefficients	<u>122</u>
6.1. Elementary Solutions of Elliptic Equations	<u>122</u>
6.2. Elementary Solutions of Regular Homogeneous Equations	<u>128</u>
6.3. Elementary Solutions of Cauchy's Problem	<u>132</u>
Appendix 1. Local Properties of Generalized Functions	<u>140</u>
A1.1. Test Functions as Averages of Continuous Functions	<u>141</u>
A1.2. Partition of Unity	<u>142</u>
A1.3. Local Properties of Generalized Functions	<u>144</u>
A1.4. Differentiation as a Local Operation	<u>146</u>

Appendix 2. Generalized Functions Depending on a Parameter . . .	<u>147</u>
A2.1. Continuous Functions	<u>147</u>
A2.2. Differentiable Functions	<u>148</u>
A2.3. Analytic Functions	<u>149</u>
 Chapter II	
Fourier Transforms of Generalized Functions	<u>153</u>
1. Fourier Transforms of Test Functions	<u>153</u>
1.1. Fourier Transforms of Functions in K	<u>153</u>
1.2. The Space Z	<u>155</u>
1.3. The Case of Several Variables	<u>157</u>
1.4. Functionals on Z	<u>158</u>
1.5. Analytic Functionals	<u>160</u>
1.6. Fourier Transforms of Functions in S	<u>165</u>
2. Fourier Transforms of Generalized Functions. A Single Variable	<u>166</u>
2.1. Definition	<u>166</u>
2.2. Examples	<u>168</u>
2.3. Fourier Transforms of x_+^λ , x_-^λ , $ x ^\lambda$, and $ x ^\lambda \operatorname{sgn} x$	<u>170</u>
2.4. Fourier Transforms of $x_+^\lambda \ln x_+$ and Similar Generalized Functions	<u>174</u>
2.5. Fourier Transform of the Generalized Function $(ax^2 + bx + c)_+^\lambda$	<u>182</u>
2.6. Fourier Transforms of Analytic Functionals	<u>188</u>
3. Fourier Transforms of Generalized Functions. Several Variables	<u>190</u>
3.1. Definitions	<u>190</u>
3.2. Fourier Transform of the Direct Product	<u>191</u>
3.3. Fourier Transform of r^λ	<u>192</u>
3.4. Fourier Transform of Generalized Function with Bounded Support	<u>196</u>
3.5. The Fourier Transform as the Limit of a Sequence of Functions	<u>200</u>
4. Fourier Transforms and Differential Equations	<u>200</u>
4.1. Introductory Remarks	<u>200</u>
4.2. The Iterated Laplace Equation $\Delta^m u = f$	<u>201</u>

4.3. The Wave Equation in Space of Odd Dimension . . .	<u>202</u>
4.4. The Relation between the Elementary Solution of an Equation and the Corresponding Cauchy Problem . . .	<u>204</u>
4.5. Classical Operational Calculus	<u>206</u>

Chapter III

Particular Types of Generalized Functions	<u>209</u>
1. Generalized Functions Concentrated on Smooth Manifolds of Lower Dimension	<u>209</u>
1.1. Introductory Remarks on Differential Forms	<u>214</u>
1.2. The Form ω	<u>220</u>
1.3. The Generalized Function $\delta(P)$	<u>222</u>
1.4. Example: Derivation of Green's Theorem	<u>226</u>
1.5. The Differential Forms $\omega_k(\varphi)$ and the Generalized Functions $\delta^{(k)}(P)$	<u>228</u>
1.6. Recurrence Relations for the $\delta^{(k)}(P)$	<u>232</u>
1.7. Recurrence Relations for the $\delta^{(k)}(aP)$	<u>236</u>
1.8. Multiplet Layers	<u>237</u>
1.9. The Generalized Function $\delta(P_1, \dots, P_k)$ and Its Derivatives	<u>239</u>
2. Generalized Functions Associated with Quadratic Forms	<u>247</u>
2.1. Definition of $\delta_1^{(k)}(P)$ and $\delta_2^{(k)}(P)$	<u>247</u>
2.2. The Generalized Function P_+^λ	<u>253</u>
2.3. The Generalized Function \mathcal{P}^λ Associated with a Quadratic Form with Complex Coefficients	<u>269</u>
2.4. The Generalized Functions $(P + i0)^\lambda$ and $(P - i0)^\lambda$	<u>274</u>
2.5. Elementary Solutions of Linear Differential Equations	<u>279</u>
2.6. Fourier Transforms of $(P + i0)^\lambda$ and $(P - i0)^\lambda$	<u>283</u>
2.7. Generalized Functions Associated with Bessel Functions	<u>285</u>
2.8. Fourier Transforms of $(c^2 + P + i0)^\lambda$ and $(c^2 + P - i0)^\lambda$	<u>287</u>
2.9. Fourier Transforms of $(c^2 + P)_+^\lambda$ and $(c^2 + P)_-^\lambda$	<u>290</u>
2.10. Fourier Transforms of $(c^2 + P)_+^\lambda/\Gamma(\lambda + 1)$ and $(c^2 + P)_-^\lambda/\Gamma(\lambda + 1)$ for Integral λ	<u>291</u>
3. Homogeneous Functions	<u>295</u>
3.1. Introduction	<u>295</u>
3.2. Positive Homogeneous Functions of Several Independent Variables	<u>297</u>

3.3. Generalized Homogeneous Functions of Degree $-n$. . .	303
3.4. Generalized Homogeneous Functions of Degree $-n - m$. . .	309
3.5. Generalized Functions of the Form $r^\lambda f$, where f Is a Generalized Function on the Unit Sphere	311
4. Arbitrary Functions Raised to the Power λ	313
4.1. Reducible Singular Points	313
4.2. The Generalized Function G^λ when $G = 0$ Consists Entirely of First-Order Points	315
4.3. The Generalized Function G^λ when $G = 0$ Has No Points of Order Higher Than Two	318
4.4. The Generalized Function G^λ in General	323
4.5. Integrals of an Infinitely Differentiable Function over a Surface Given by $G = c$	326
Summary of Fundamental Definitions and Equations of Volume I . . .	330
Table of Fourier Transforms	359
Appendix A. Proof of the Completeness of the Generalized- Function Space	368
Appendix B. Generalized Functions of Complex Variables . . .	370
B1. Generalized Functions of a Single Complex Variable . . .	371
B1.1. The Variables z and \bar{z}	371
B1.2. Homogeneous Functions of a Complex Variable	372
B1.3. The Homogeneous Generalized Functions $z^\lambda \bar{z}^\mu$	373
B1.4. The Generalized Functions z^{-k-1} and Its Derivatives . . .	377
B1.5. Associated Homogeneous Functions	378
B1.6. Uniqueness Theorem for Homogeneous Generalized Functions	379
B1.7. Fourier Transforms of Test Functions and of Generalized Functions	381
B1.8. The Generalized Functions $f^\lambda(z) f^\mu(z)$, Where $f(z)$ is a Meromorphic Function	385
B2. Generalized Functions of m Complex Variables	387
B2.1. The Generalized Functions $\delta(P)$ and $\delta^{(k,l)}(P)$	387
B2.2. The Generalized Functions $G^\lambda \bar{G}^\mu$	390
B2.3. Homogeneous Generalized Functions	391
B2.4. Associated Homogeneous Functions	393
B2.5. The Residue of a Homogeneous Function	394
B2.6. Homogeneous Generalized Functions of Degree $(-m, -m)$. . .	396

B2.7. The Generalized Function $P^\lambda P^\mu$, Where P Is a Nondegenerate Quadratic Form	<u>398</u>
B2.8. Elementary Solutions of Linear Differential Equations in the Complex Domain	<u>404</u>
B2.9. The Generalized Function $G^\lambda \bar{G}^\mu$ (General Case)	<u>406</u>
B2.10 Generalized Functions Corresponding to Meromorphic Functions of m Complex Variables	<u>411</u>
Notes and References to the Literature	<u>413</u>
Bibliography	<u>416</u>
Index	<u>419</u>
Index of Particular Generalized Functions	<u>422</u>
