|--|------------|
| Translator's Note | <u>v</u> |
| Foreword | <u>vii</u> |
| Chapter I | |
| The Kernel Theorem. Nuclear Spaces. Rigged Hilbert Space | <u>1</u> |
| 1. Bilinear Functionals on Countably Normed Spaces. The Kernel Theorem | <u>2</u> |
| 1.1. Convex Functionals | <u>3</u> |
| 1.2. Bilinear Functionals | <u>7</u> |
| 1.3. The Structure of Bilinear Functionals on Specific Spaces (the Kernel Theorem) | <u>11</u> |
| Appendix. The Spaces K , S , and 2 | <u>20</u> |
| 2. Operators of Hilbert-Schmidt Type and Nuclear Operators | <u>26</u> |
| 2.1. Completely Continuous Operators | <u>27</u> |
| 2.2. Hilbert-Schmidt Operators | <u>32</u> |
| 2.3. Nuclear Operators | <u>37</u> |
| 2.4. The Trace Norm | <u>47</u> |
| 2.5. The Trace Norm and the Decomposition of an Operator into a Sum of Operators of Rank 1 | <u>52</u> |
| 3. Nuclear Spaces. The Abstract Kernel Theorem | <u>56</u> |
| 3.1. Countably Hilbert Spaces | <u>57</u> |
| 3.2. Nuclear Spaces | <u>62</u> |
| 3.3. A Criterion for the Nuclearity of a Space | <u>66</u> |
| 3.4. Properties of Nuclear Spaces | <u>71</u> |
| 3.5. Bilinear Functionals on Nuclear Spaces | <u>73</u> |
| 3.6. Examples of Nuclear Spaces | <u>79</u> |
| 3.7. The Metric Order of Sets in Nuclear Spaces | <u>86</u> |
| 3.8. The Functional Dimension of Linear Topological Spaces | <u>98</u> |

| | |
|---|------------|
| 4. Rigged Hilbert Spaces. Spectral Analysis of Self-Adjoint and Unitary Operators | <u>103</u> |
| 4.1. Generalized Eigenvectors | <u>103</u> |
| 4.2. Rigged Hilbert Spaces | <u>106</u> |
| 4.3. The Realization of a Hilbert Space as a Space of Functions, and Rigged Hilbert Spaces | <u>110</u> |
| 4.4. Direct Integrals of Hilbert Spaces, and Rigged Hilbert Spaces | <u>114</u> |
| 4.5. The Spectral Analysis of Operators in Rigged Hilbert Spaces | <u>119</u> |
| Appendix. The Spectral Analysis of Self-Adjoint and Unitary Operators in Hilbert Space. | <u>127</u> |
| 1. The Abstract Theorem on Spectral Decomposition | <u>127</u> |
| 2. Cyclic Operators | <u>129</u> |
| 3. The Decomposition of a Hilbert Space into a Direct Integral Corresponding to a Given Self-Adjoint Operator | <u>130</u> |
| Chapter II | |
| Positive and Positive-Definite Generalized Functions | <u>135</u> |
| 1. Introduction | <u>135</u> |
| 1.1. Positivity and Positive Definiteness | <u>136</u> |
| 2. Positive Generalized Functions | <u>142</u> |
| 2.1. Positive Generalized Functions on the Space of Infinitely Differentiable Functions Having Bounded Supports | <u>142</u> |
| 2.2. The General Form of Positive Generalized Functions on the Space S | <u>145</u> |
| 2.3. Positive Generalized Functions on Some Other Spaces | <u>147</u> |
| 2.4. Multiplicatively Positive Generalized Functions | <u>149</u> |
| 3. Positive-Definite Generalized Functions. Bochner's Theorem | <u>151</u> |
| 3.1. Positive-Definite Generalized Functions on S | <u>151</u> |
| 3.2. Continuous Positive-Definite Functions | <u>152</u> |
| 3.3. Positive-Definite Generalized Functions on K | <u>157</u> |
| 3.4. Positive-Definite Generalized Functions on Z | <u>166</u> |
| 3.5. Translation-Invariant Positive-Definite Hermitean Bilinear Functionals | <u>167</u> |
| 3.6. Examples of Positive and Positive-Definite Generalized Functions | <u>169</u> |

| | |
|---|------------|
| 4. Conditionally Positive-Definite Generalized Functions | <u>175</u> |
| 4.1. Basic Definitions | <u>175</u> |
| 4.2. Conditionally Positive Generalized Functions (Case of One Variable) | <u>176</u> |
| 4.3. Conditionally Positive Generalized Functions (Case of Several Variables) | <u>179</u> |
| 4.4. Conditionally Positive-Definite Generalized Functions on K | <u>188</u> |
| 4.5. Bilinear Functionals Connected with Conditionally Positive-Definite Generalized Functions | <u>189</u> |
| Appendix | <u>194</u> |
| 5. Evenly Positive-Definite Generalized Functions | <u>196</u> |
| 5.1. Preliminary Remarks | <u>196</u> |
| 5.2. Evenly Positive-Definite Generalized Functions on $S_{\frac{1}{2}}$ | <u>198</u> |
| 5.3. Evenly Positive-Definite Generalized Functions on $S_{\frac{1}{2}}$ | <u>211</u> |
| 5.4. Positive-Definite Generalized Functions and Groups of Linear Transformations | <u>213</u> |
| 6. Evenly Positive-Definite Generalized Functions on the Space of Functions of One Variable with Bounded Supports | <u>216</u> |
| 6.1. Positive and Multiplicatively Positive Generalized Functions | <u>216</u> |
| 6.2. A Theorem on the Extension of Positive Linear Functionals | <u>219</u> |
| 6.3. Even Positive Generalized Functions on Z | <u>220</u> |
| 6.4. An Example of the Nonuniqueness of the Positive Measure Corresponding to a Positive Functional on Z_+ | <u>226</u> |
| 7. Multiplicatively Positive Linear Functionals on Topological Algebras with Involutions | <u>229</u> |
| 7.1. Topological Algebras with Involutions | <u>229</u> |
| 7.2. The Algebra of Polynomials in Two Variables | <u>232</u> |
| Chapter III | |
| Generalized Random Processes | <u>237</u> |
| 1. Basic Concepts Connected with Generalized Random Processes | <u>237</u> |
| 1.1. Random Variables | <u>237</u> |
| 1.2. Generalized Random Processes | <u>242</u> |

| | |
|---|------------|
| 1.3. Examples of Generalized Random Processes | <u>244</u> |
| 1.4. Operations on Generalized Random Processes | <u>245</u> |
| 2. Moments of Generalized Random Processes. Gaussian Processes. Characteristic Functionals | <u>246</u> |
| 2.1. The Mean of a Generalized Random Process | <u>246</u> |
| 2.2. Gaussian Processes | <u>248</u> |
| 2.3. The Existence of Gaussian Processes with Given Means and Correlation Functionals | <u>252</u> |
| 2.4. Derivatives of Generalized Gaussian Processes | <u>257</u> |
| 2.5. Examples of Gaussian Generalized Random Processes | <u>257</u> |
| 2.6. The Characteristic Functional of a Generalized Random Process | <u>260</u> |
| 3. Stationary Generalized Random Processes. Generalized Random Processes with Stationary n th-Order Increments | <u>262</u> |
| 3.1. Stationary Processes | <u>262</u> |
| 3.2. The Correlation Functional of a Stationary Process | <u>263</u> |
| 3.3. Processes with Stationary Increments | <u>265</u> |
| 3.4. The Fourier Transform of a Stationary Generalized Random Process | <u>268</u> |
| 4. Generalized Random Processes with Independent Values at Every Point | <u>273</u> |
| 4.1. Processes with Independent Values | <u>273</u> |
| 4.2. A Condition for the Positive Definiteness of the Func- tional $\exp(\int f[\varphi(t)] dt)$ | <u>275</u> |
| 4.3. Processes with Independent Values and Conditionally Positive-Definite Functions | <u>279</u> |
| 4.4. A Connection between Processes with Independent Values at Every Point and Infinitely Divisible Distribution Laws | <u>283</u> |
| 4.5. Processes Connected with Functionals of the n th Order | <u>284</u> |
| 4.6. Processes of Generalized Poisson Type | <u>285</u> |
| 4.7. Correlation Functionals and Moments of Processes with Independent Values at Every Point | <u>286</u> |
| 4.8. Gaussian Processes with Independent Values at Every Point | <u>288</u> |

| | |
|---|------------|
| 5. Generalized Random Fields | <u>289</u> |
| 5.1. Basic Definitions | <u>289</u> |
| 5.2. Homogeneous Random Fields and Fields with Homogeneous sth -Order Increments | <u>290</u> |
| 5.3. Isotropic Homogeneous Generalized Random Fields | <u>292</u> |
| 5.4. Generalized Random Fields with Homogeneous and Isotropic sth -Order Increments | <u>294</u> |
| 5.5. Multidimensional Generalized Random Fields | <u>297</u> |
| 5.6. Isotropic and Vectorial Multidimensional Random Fields | <u>301</u> |

Chapter IV

| | |
|--|------------|
| Measures in Linear Topological Spaces | <u>303</u> |
| 1. Basic Definitions | <u>303</u> |
| 1.1. Cylinder sets | <u>303</u> |
| 1.2. Simplest Properties of Cylinder Sets | <u>305</u> |
| 1.3. Cylinder Set Measures | <u>307</u> |
| 1.4. The Continuity Condition for Cylinder Set Measures | <u>309</u> |
| 1.5. Induced Cylinder Set Measures | <u>311</u> |
| 2. The Countable Additivity of Cylinder Set Measures in Spaces Adjoint to Nuclear Spaces | <u>312</u> |
| 2.1. The Additivity of Cylinder Set measures | <u>312</u> |
| 2.2. A Condition for the Countable Additivity of Cylinder Set Measures in Spaces Adjoint to Countably Hilbert Spaces | <u>317</u> |
| 2.3. Cylinder Sets Measures in the Adjoint Spaces of Nuclear Countably Hilbert Spaces | <u>320</u> |
| 2.4. The Countable Additivity of Cylinder Set Measures in Spaces Adjoint to Union Spaces of Nuclear Spaces | <u>330</u> |
| 2.5. A Condition for the Countable Additivity of Measures on the Cylinder Sets in a Hilbert Space | <u>333</u> |
| 3. Gaussian Measures in Linear Topological Spaces | <u>335</u> |
| 3.1. Definition of Gaussian Measures | <u>335</u> |
| 3.2. A Condition for the Countable Additivity of Gaussian Measures in the Conjugate Spaces of Countably Hilbert Spaces | <u>339</u> |

| | |
|--|------------|
| 4. Fourier Transforms of Measures in Linear Topological Spaces | <u>345</u> |
| 4.1. Definition of the Fourier Transform of a Measure | <u>345</u> |
| 4.2. Positive-Definite Functionals on Linear Topological Spaces | <u>347</u> |
| 5. Quasi-Invariant Measures in Linear Topological Spaces | <u>350</u> |
| 5.1. Invariant and Quasi-Invariant Measures in Finite- Dimensional Spaces | <u>350</u> |
| 5.2. Quasi-Invariant Measures in Linear Topological Spaces. | <u>354</u> |
| 5.3. Quasi-Invariant Measures in Complete Metric Spaces. | <u>359</u> |
| 5.4. Nuclear Lie Groups and Their Unitary Representations. The Commutation Relations of the Quantum Theory of Fields | <u>362</u> |
| Notes and References to the Literature | <u>371</u> |
| Bibliography | <u>377</u> |
| Subject Index | <u>381</u> |
