Preface	xi
Chapter 1. Introduction	1
1.1. Electrostatic Actuators and Nonlinear PDEs	1
1.2. Derivation of the Model for Homogeneous Systems	4
1.3. MEMS Models with Variable Permittivity Profiles	6
1.4. Bifurcation Diagrams and Numerical Evidence	11
1.5. Brief Outline	24
Part 1. Second-Order Equations Modeling Stationary MEMS	31
Chapter 2. Estimates for the Pull-In Voltage	33
2.1. Existence of the Pull-In Voltage	33
2.2. Lower Estimates for the Pull-In Voltage	39
2.3. Upper Bounds for the Pull-In Voltage	43
2.4. Numerics for the Pull-In Voltage	46
Further Comments	50
Chapter 3. The Branch of Stable Solutions	51
3.1. Spectral Properties of Minimal Solutions	51
3.2. Energy Estimates and Regularity of Solutions	55
3.3. Linear Instability and Compactness	62
3.4. Effect of an Advection on the Minimal Branch	69
Further Comments	74
Chapter 4. Estimates for the Pull-In Distance	77
4.1. Lower Estimates on the Pull-In Distance in General Domains	77
4.2. Upper Estimate for the Pull-In Distance in General Domains	80
4.3. Upper Bounds for the Pull-In Distance in the Radial Case	82
4.4. Effect of Power-Law Profiles on Pull-In Distances	85
4.5. Asymptotic Behavior of Stable Solutions near the Pull-In Voltage	90
Further Comments	92
Chapter 5. The First Branch of Unstable Solutions	93
5.1. Existence of Nonminimal Solutions	94
5.2. Blowup Analysis for Noncompact Sequences of Solutions	98
5.3. Compactness along the First Branch of Unstable Solutions	103
5.4. Second Bifurcation Point	110
Further Comments	112

Chapter 6. Description of the Global Set of Solutions	115
6.1. Compactness along the Unstable Branches	116
6.2. Quenching Branch of Solutions in General Domains	125
6.3. Uniqueness of Solutions for Small Voltage in Star-Shaped Domains	129
6.4. One-Dimensional Problem	137
Further Comments	139
Chapter 7. Power-Law Profiles on Symmetric Domains	141
7.1. A One-Dimensional Sobolev Inequality	141
7.2. Monotonicity Formula and Applications	145
7.3. Compactness of Higher Branches of Radial Solutions	152
7.4. Two-Dimensional MEMS on Symmetric Domains	162
Further Comments	172
Part 2. Parabolic Equations Modeling MEMS Dynamic Deflections	175
Chapter 8. Different Modes of Dynamic Deflection	177
8.1. Global Convergence versus Quenching	178
8.2. Quenching Points and the Zero Set of the Profile	187
8.3. The Quenching Set on Convex Domains	192
Further Comments	198
Chapter 9. Estimates on Quenching Times	199
9.1. Comparison Results for Quenching Times	199
9.2. General Asymptotic Estimates for Quenching Time	201
9.3. Upper Estimates for Quenching Times for all $\lambda > \lambda^*$	203
9.4. Quenching Time Estimates in Low Dimension	210
Further Comments	215
Chapter 10. Refined Profile of Solutions at Quenching Time	217
10.1. Integral and Gradient Estimates for Quenching Solutions	217
10.2. Refined Quenching Profile	221
10.3. Refined Quenching Profiles in Dimension $N = 1$	229
10.4. Refined Quenching Profiles in the Radially Symmetric Case	233
10.5. More on the Location of Quenching Points	240
Further Comments	242
Part 3. Fourth-Order Equations Modeling Nonelastic MEMS	243
Chapter 11. A Fourth-Order Model with a Clamped Boundary on a Ball	245
11.1. Boggio's Principle	245
11.2. Pull-In Voltage	249
11.3. Stability of the Minimal Branch of Solutions	255
11.4. Regularity of the Extremal Solution for $1 \leq N \leq 8$	260
11.5. The Extremal Solution Is Singular for $N \geq 9$	263
Further Comments	268

Chapter 12. A Fourth-Order Model with a Pinned Boundary on Convex Domains	269
12.1. The Minimal Solutions up to the Pull-In Voltage	269
12.2. Stability of Minimal Solutions	274
12.3. Regularity of the Extremal Solution on General Domain for $N \leq 4$	279
12.4. Uniform Energy Bounds for Solutions in Convex Domains	280
12.5. The Solution Set on Convex Domains in \mathbb{R}^2	283
12.6. Regularity of the Extremal Solution on Balls for $N \leq 8$	289
12.7. Singularity of the Extremal Solution on Balls for $N \geq 9$	291
Further Comments	296
Appendix A. Hardy-Rellich Inequalities	299
A.1. Improved Hardy-Rellich Inequalities in $H_0^2(B)$	299
A.2. Improved Hardy-Rellich Inequalities in $H^2(B) \cap H_0^1(B)$	302
Bibliography	309
Index	317
