

Contents

Introduction	vii
Chapter 1. Population Dynamics	1
1.1. Population Renewal	4
1.2. Population Wave Equation	11
1.3. Discrete-Event Models	19
Chapter 2. Random Processes	29
2.1. Markov Chains	30
2.2. Branching Processes	34
2.3. Random Walks	40
Chapter 3. Microbial Ecology	51
3.1. Modeling Nutrient Uptake	51
3.2. Food and Growth: The Chemostat	55
3.3. Food Chains	57
3.4. Bacterial Growth on a Petri Dish	61
3.5. Chemotaxis	65
3.6. Mosquitoes near a Malarial Swamp	70
Chapter 4. Propagation of Epidemic Diseases	73
4.1. Spread of Disease in a Small Group	74
4.2. Threshold of an Epidemic	76
4.3. Stratification by Chronological Age and by Class Age	83
4.4. Influence of Environmental Fluctuations	85
4.5. The Ross-Macdonald Model of Malaria	89
Chapter 5. Population Genetics	95
5.1. Darwinian Evolution	96
5.2. Epigenetic Landscape	104
5.3. Malaria and Sickle Cell Genetics	107
Chapter 6. Stratifications of Disease Systems	113
6.1. Temporal Stratifications: Surviving the Dry Season	117
6.2. Parasites within Humans: The Erythrocytic Cycle and Gametocyte Production	117
6.3. Stratification by Infection Age	121
6.4. Stratification by Age and Geography	123
6.5. Controlling Malaria	130

Chapter 7. MATLAB® Programs	133
7.1. Demographic Simulations	133
7.2. Random Simulations	134
7.3. Microbial Ecology Simulations	136
7.4. Epidemic Simulations	137
7.5. Genetics Simulations	138
7.6. Malaria Simulations	139
Bibliography	143
Index	147
