Preface	vii
Chapter 1. The HIV Pandemic	1
1.1. Introduction	1
1.2. Prototype Dynamics	2
1.3. Effect of Drug Treatment	7
1.4. Other Players in the Immune System	11
1.5. Time Delay	14
1.6. Conclusion	15
Chapter 2. Basic Facts of Immunology	17
2.1. Introduction	17
2.2. Lymphocytes	17
2.3. MHC Interactions	19
2.4. Receptors	20
2.5. Learning and Memory	21
2.6. The Self/Nonself Discrimination Problem	23
Chapter 3. Quantifying the Immune Response (Assays)	25
3.1. Rosette Formation	26
3.2. Limiting Dilution Analysis	30
3.3. RIA and ELISA	32
3.4. Hemolytic Plaque Technique	36
Chapter 4. Modeling Humoral Immune Responses	43
4.1. Binding Process	43
4.2. Multivalent Binding	44
4.3. Network Formation	49
4.4. B-Cell Progression	53
4.5. Evolutionary Training of Ag-Ab Complementarity	58
4.6. Affinity Maturation	61
4.7. Hypermutation Sequence	63
4.8. Humoral Response at Low Resolution	67
Chapter 5. Modeling Cell-Mediated Response	73
5.1. Cell-Mediated Toxicity	73
5.2. Immune Surveillance	78
5.3. Effect of Fluctuations	80
5.4. Tumor Escape	82

Chapter 6. Control of Immune Response	89
6.1. Immune Networks	89
6.2. Estimates of Connectivity	93
6.3. Cytokine Networks	93
Chapter 7. Viewpoint of the Virus	97
7.1. Reprise	97
7.2. Short-Time Strategy	98
7.3. Intermediate Time Control	101
General References	107
Index	109
