

Index

- absolute regulation, 56
- acceleration of a particle, 83
- acrasin, 125
- activation pattern, 48
- activator, 38, 217
- activator-inhibitor model, 55
 - Gierer-Meinhardt, 53
- adhesion
 - as a difference function, 92
 - chemistry of, 89
 - floating site model, 93
- adhesion-driven structure, 117
- adhesive energy, 68
- allometric regulation, 36
- amphibian blastula, 168
- amphioxus development, 3
- animal pole, 103
- apical ectodermal ridge, 159
- applications of reaction-diffusion
 - mechanisms, 61
- autocatalysis, 53, 183, 217
- autocatalytic activation, 42

- blastocoel, 101
- bicoid gradient, 216
- biochemical analog-digital converter, 66
- biochemical entrainment, 179
- biochemical oscillation, 144
- biochemical waves, 179, 182
- biological pattern, 35
- birth-death process, 138
- blastocoel, 3
 - formation of, 3
 - gastrulation of, 105
- blastopore, 101
- blastula, 3, 29, 101
- blastulation, 3, 13
- bottle cells, 102

- butterfly, 19

- Cahn-Hilliard equation, 120
- catastrophe set, 18
- catastrophe theory, 13
- cell
 - density field of, 4
 - life cycle of, 144
 - mechanical motion of, 5
- cell adhesion
 - Bell's reaction-diffusion model, 94
 - floating site model, 93
 - Steinberg's sparse site model, 70
- cell affinities, 103
- cell aggregates
 - rheology of, 74
 - stability of, 72
- cell cleavage, 137
- cell division
 - environmental control of, 151
- cell fragmentation, 137
- cell motion
 - in thin layers, 110
- cell proliferation, 137
 - with fixed cell lifetime, 140
- cell shape change, 166
- cell sorting, 67, 103
 - discrete case, 70
 - kinematics of, 72
 - long-range interactions, 72
 - shishkabob experiment, 74
- cell types
 - continuum of, 91
- cellular slime molds, 35
- chalones, 157
- chemical equilibrium, 43
- chemical kinetics
 - homogeneous, 38

- chemotaxis, 125
 - augmented by a Turing system, 129
 - pulsatile, 127
- chick development, 3
- chick limb bud, 151, 225
 - boundary corrections, 154
- clone, 191
- codimension, 16
- coelenterates, 37
- compartmental boundaries
 - as shocks, 201
- compartmentalization
 - nonlinear theory, 198
- compartments, 191
- condition of maximum likelihood, 152
- conservation of mass, 82
- contact inhibition, 158
- continuity
 - Eulerian equation of, 82
 - Lagrangian equation of, 83
- contour control, 65
- Couette layer, 74
- creeping flow, 86
- cusp, 31
- cyclic AMP, 125
- cytoplasmic growth, 137

- degenerate set, 18
- degenerate singular germ, 20
- dermal cells, 122
- detailed balance, 44, 47
- Dictyostelium discoideum*, 35, 125
- differential adhesion, 67
- diffusive instability, 193, 199
- diffusivity
 - time-dependent, 193
- dimensional considerations, 85
- dimensionless variables, 86
- dissipation function, 87
- dissipative flow, 166
- divergence theorem, 82, 215
- Drosophila*, 191
- dynamic bifurcation, 198
- dynamics
 - of stem cells, 160

- Edelstein switch, 52, 65
- eigenfunctions
 - describing compartments, 194
- elliptic umbilic, 23
- emboly, 101

- embryogenesis, 137
- endoderm, ectoderm, and mesoderm, 3
- energy balance, 86
- energy density, 6
- energy function, 4, 14
 - nondegenerate, 15
- energy integral, 213, 215
- engulfment, 69
 - partial, 69
 - transitive ordering of, 68
- entrainment of frequency, 181
- environmental control of cell division, 151
- enzyme kinetics
 - Michaelis-Menten, 46
 - with inhibitor, 46
- epiblast, 101
- epiboly, 101, 165
 - in teleost fishes, 110
- epigenesis, 1
- epithelial cells, 168
- equilibrium
 - nonthermodynamic, 47
 - quasi-static, 4
 - stability of, 5, 98
- Euler-Lagrange variational principle, 51
- Eulerian viewpoint, 81
- exponential growth, 139
- exponential probability distribution, 162
- extinction probability, 139
