

Contents

Preface	vii
Chapter 1. Introduction	1
1.1. Outline	1
1.2. Supplementary Material	2
Chapter 2. Basic Formulation	5
2.1. What Are Large Deviations?	5
2.2. Evaluation of Integrals	8
2.3. Contraction Principle	9
2.4. Simple Examples and Remarks	10
Chapter 3. Small Noise	13
3.1. The Exit Problem	13
3.2. Large Deviations of $\{P_{\epsilon,x}\}$	14
3.3. The Exit Problem	17
3.4. Superexponential Estimates	20
3.5. General Diffusion Processes	22
3.6. Short-Time Behavior of Diffusions	25
3.7. Supplementary Material	27
Chapter 4. Large Time	29
4.1. Introduction	29
4.2. Large Deviations and the Principal Eigenvalues	32
4.3. More General State Spaces	33
4.4. Dirichlet Eigenvalues	34
4.5. Lower Bound	35
4.6. Upper Bounds	37
4.7. The Role of Topology	40
4.8. Finishing Up	43
4.9. Remarks	43
Chapter 5. Hydrodynamic Scaling	45
5.1. From Classical Mechanics to Euler Equations	45
5.2. Simple Exclusion Processes	48
5.3. Symmetric Simple Exclusion	52
5.4. Weak Asymmetry	55
5.5. Large Deviations	62
Chapter 6. Self-Diffusion	71
6.1. Motion of a Tagged Particle	71

Chapter 7. Nongradient Systems	79
7.1. Multicolor Systems	79
7.2. Tightness Estimates	84
7.3. Approximations	88
7.4. Calculating Variances	91
7.5. Proofs	95
Chapter 8. Some Comments About TASEP	99
Bibliography	103
