

Contents

Preface	vii
Acknowledgments	x
Part 1. Introduction	1
Chapter 1. Lattice Models, Phase Transitions, and Critical Exponents	3
1.1. Ising Model	3
1.2. Blume-Capel Model and Tricritical Ising Model	6
1.3. 3-Potts Model and Tricritical 3-Potts Model	8
1.4. Other Models Described by CFT	8
1.5. Universality of Phase Transitions	9
1.6. Outlook: Statistical Field Theory	10
Chapter 2. Statistical and Quantum Field Theories	11
2.1. Renormalization Group	11
2.2. The Gaussian Free Field	14
2.3. The Free Boson Theory	19
2.4. Scaling Limits and the Ising Model	28
2.5. Summary and Outlook	30
Chapter 3. Conformal Field Theory	31
3.1. Conformal Symmetry	31
3.2. Key Insights of CFT	34
3.3. Lattice Approach of CFT	35
Part 2. Conformal Field Theory: Minimal Models on the Plane	37
Chapter 4. Local Fields and Correlations	39
4.1. Choice of Lattice and Lattice Equivalence	39
4.2. Lattice Local Fields	40
4.3. Local Fields as Limits of Lattice Local Fields	45
4.4. Translations, Scalings, Rotations, and Reflections of Fields	50
4.5. Universality and LADE	58
4.6. Field Identities and OPEs	62
4.7. Local Fields: Summary and Conjecture	66
Chapter 5. Stress-Energy Tensor and Conformal Ward Identities	67
5.1. CFT: Definition	68
5.2. Stress Tensor and Action: Geometric and Probabilistic Origin	71

5.3. Diffeomorphism Equivalence at the Lattice Level	74
5.4. SFTs with ILACI Property are CFTs: The Ward Identities	80
5.5. Virasoro Structure	86
5.6. Local Field Transformations	93
5.7. Conformal Maps on the Sphere	101
5.8. Summary	111
Chapter 6. Unitarity and Radial Quantization	113
6.1. Unitarity: Definition and Motivation	113
6.2. Cylinder Transfer Matrix and Reflection-Positivity	114
6.3. Radial Lattice, Inversion, and Inversion-Positivity	120
6.4. Operator-State Correspondence	128
6.5. Unitarity	132
Chapter 7. Primary Fields and Conformal Families	135
7.1. Primaries and Descendants	135
7.2. Correlations of Descendants	139
7.3. Splitting Into Conformal Families from Unitarity	141
7.4. Verma Module and Shapovalov Form	143
7.5. Kac Determinant Formula	151
7.6. Singular Vectors	157
7.7. Shapovalov Form and Unitarity	158
7.8. Positive (Semi)Definiteness: Proofs and Insights	164
7.9. Summary	178
Chapter 8. Unitary Minimal Models, Lattice Models, and Loop Models	181
8.1. Unitary Minimal Models	181
8.2. Ising Model as a Unitary Minimal Model	186
8.3. Other Lattice Models	190
Bibliography	197
Index	203
