Preface	xi
1 Two Classical Inequalities	1
1.1 AM-GM Inequality	1
1.2 Cauchy-Schwarz Inequality	8
Exercises	12
References	15
2 A New Approach for Proving Inequalities	17
Exercises	22
References	23
3 Means Generated by an Integral	25
Exercises	30
References	32
4 The L'Hôpital Monotone Rule	33
Exercises	37
References	38
5 Trigonometric Identities via Complex Numbers	39
5.1 A Primer of complex numbers	39
5.2 Finite Product Identities	41
5.3 Finite Summation Identities	43
5.4 Euler's Infinite Product	45
5.5 Sums of inverse tangents	48
5.6 Two Applications	49
Exercises	51
References	53
6 Special Numbers	55
6.1 Generating Functions	55
6.2 Fibonacci Numbers	56
6.3 Harmonic numbers	58
6.4 Bernoulli Numbers	61

Exercises	69
References	72
7 On a Sum of Cosecants	73
7.1 A well-known sum and its generalization	73
7.2 Rough estimates	74
7.3 Tying up the loose bounds	76
7.4 Final Remarks	79
Exercises	79
References	81
8 The Gamma Products in Simple Closed Forms	83
Exercises	89
References	91
9 On the Telescoping Sums	93
9.1 The sum of products of arithmetic sequences	94
9.2 The sum of products of reciprocals of arithmetic sequences	95
9.3 Trigonometric sums	97
9.4 Some more telescoping sums	101
Exercises	106
References	108
10 Summation of Subseries in Closed Form	109
Exercises	117
References	119
11 Generating Functions for Powers of Fibonacci Numbers	121
Exercises	128
References	130
12 Identities for the Fibonacci Powers	131
Exercises	140
References	142
13 Bernoulli Numbers via Determinants	143
Exercises	149
References	152
14 On Some Finite Trigonometric Power Sums	153
14.1 Sums involving $\sec^{2p}(k\pi/n)$	154
14.2 Sums involving $\csc^{2p}(k\pi/n)$	156
14.3 Sums involving $\tan^{2p}(k\pi/n)$	157
14.4 Sums involving $\cot^{2p}(k\pi/n)$	159
Exercises	162
References	164
15 Power Series of $(\arcsin x)^2$	165
15.1 First Proof of the Series (15.1)	165
15.2 Second Proof of the Series (15.1)	167
Exercises	171

References	173
16 Six Ways to Sum $\zeta(2)$	175
16.1 Euler's Proof	176
16.2 Proof by Double Integrals	177
16.3 Proof by Trigonometric Identities	181
16.4 Proof by Power Series	182
16.5 Proof by Fourier Series	183
16.6 Proof by Complex Variables	183
Exercises	184
References	187
17 Evaluations of Some Variant Euler Sums	189
Exercises	197
References	199
18 Interesting Series Involving Binomial Coefficients	201
18.1 An integral representation and its applications	202
18.2 Some Extensions	208
18.3 Searching for new formulas for π	210
Exercises	212
References	215
19 Parametric Differentiation and Integration	217
Example 1	217
Example 2	218
Example 3	219
Example 4	220
Example 5	220
Example 6	222
Example 7	223
Example 8	224
Example 9	225
Example 10	226
Exercises	228
References	230
20 Four Ways to Evaluate the Poisson Integral	231
20.1 Using Riemann Sums	232
20.2 Using A Functional Equation	233
20.3 Using Parametric Differentiation	234
20.4 Using Infinite Series	235
Exercises	235
References	239
21 Some Irresistible Integrals	241
21.1 Monthly Problem 10611	241
21.2 Monthly Problem 11206	243
21.3 Monthly Problem 11275	244

21.4 Monthly Problem 11277	245
21.5 Monthly Problem 11322	246
21.6 Monthly Problem 11329	247
21.7 Monthly Problem 11331	249
21.8 Monthly Problem 11418	250
Exercises	252
References	254
Solutions to Selected Problems	255
Index	297
About the Author	301
