

Contents

Preface to a Preliminary Edition	ix
Introduction	xi
0 Review of Arithmetic	1
0.1 Counting Numbers	1
0.2 Integers	13
0.3 Inequalities	18
0.4 Extras	23
1 Divisibility	27
1.1 Basic Properties of Divisibility	27
1.2 The Arithmetic of Divisibility	31
1.3 Divisibility Problems	34
1.4 Extras	38
2 Congruence	45
2.1 The Division Algorithm	46
2.2 Basic Properties and Arithmetic of Congruence	50
2.3 Congruence and Divisibility	54
2.4 Extras	59
3 Common Divisors and Multiples	65
3.1 Greatest Common Divisors and the Euclidean Algorithm	66
3.2 Relatively Prime Numbers	73
3.3 Least Common Multiples	77
3.4 Extras	81
4 Linear Diophantine Equations	91
4.1 Bézoutian Algorithm	91
4.2 Homogeneous and Non-homogeneous Equations	99
4.3 Linear Diophantine Problems	102
4.4 Extras	108

5 Prime Factorizations	115
5.1 Prime and Composite Numbers	116
5.2 Fundamental Theorem of Arithmetic	119
5.3 Applications of the Fundamental Theorem of Arithmetic	124
5.4 Extras	127
6 Rational and Irrational Numbers	133
6.1 Fractions	133
6.2 Decimals	138
6.3 Real Numbers	144
6.4 Extras	149
7 Numeration Systems	155
7.1 Arithmetic in Other Bases	156
7.2 Conversion between Bases	163
7.3 Applications of Other Bases	167
7.4 Extras	174
Appendix: A Legacy of Martin Gardner	183
Solution to Odd-numbered Exercises	185
Index	221
About the Author	225
