Preface	xi
The Foundation On Which Calculus Stands	1
1 Critical Points and Graphing	3
1 Introduction.....	3
2 Setting the Scene.....	3
3 A Critical Lemma and its Consequences.....	4
4 Concavity.....	5
5 The Critical Point Graphing Method.....	5
6 Problems and Remarks.....	10
7 Further Reading and Projects.....	13
2 Inverse Functions	19
1 Introduction.....	19
2 Preliminaries.....	20
3 Monotonicity and Continuity.....	20
4 Monotonicity and One-to-one Functions.....	21
5 Inverse Functions.....	22
6 The Derivative Rule for Inverse Functions.....	23
7 Power Rules.....	24
8 Problems and Remarks.....	24
9 Further Reading and Projects.....	28
3 Exponential and Logarithmic Functions	31
1 Introduction.....	31
2 Preliminaries.....	31
3 The Differentiability of a^x	32
4 The Exponential Function e^x	34
5 Logarithmic Functions.....	34
6 Problems and Remarks.....	35
7 Further Reading and Projects.....	38

4	Linear Approximation and Newton's Method	43
1	Introduction.....	43
2	The Tangent Line Approximation.....	43
3	Error of the Tangent Line Approximation.....	45
4	Newton's Method.....	47
5	Convergence of Newton's Method.....	48
6	Error in Newton's Method.....	52
7	Problems and Remarks.....	54
8	Further Reading and Projects.....	58
5	Taylor Polynomial Approximation	61
1	Introduction.....	61
2	Taylor Polynomials.....	61
3	Linear Approximation Revisited.....	62
4	Quadratic Approximation.....	65
5	General Taylor Polynomials.....	67
6	Problems and Remarks.....	69
7	Further Reading and Projects.....	73
6	Global Extreme Values	77
1	Introduction.....	77
2	Extreme Values via Families of Parallel Lines.....	78
3	Extreme Values via Families of Circles and Ellipses.....	81
4	Extreme Values via Families of Hyperbolas.....	83
5	Change of Variables.....	84
6	Connection with Lagrange Multipliers.....	85
7	Problems and Remarks.....	86
8	Further Reading and Projects.....	89
7	Angular Velocity and Curvature	91
1	Introduction.....	91
2	Preliminaries.....	91
3	Angular Speed for Plane Curves Revisited.....	95
4	Angular Velocity and Speed for Space Curves.....	97
5	A Unified Treatment of Curvature.....	99
6	Angular Speed and Curvature.....	101
7	Problems and Remarks.....	102
8	Further Reading and Projects.....	105
8	π and e are Irrational	107
1	Introduction.....	107
2	The Game Plan.....	107
3	The Polynomial $f(x)$	108
4	The Integral I	109

5	π is Irrational.....	110
6	Problems and Remarks.....	110
7	Further Reading and Projects.....	112
9	Hanging Cables	115
1	Introduction.....	115
2	Setting the Stage.....	116
3	The Model.....	116
4	The Solution.....	119
5	Confirmation of the Model.....	120
6	Tension Along the Cable.....	121
7	Cost Considerations.....	122
8	Problems and Remarks.....	123
9	Further Reading and Projects.....	125
10	The Buffon Needle Problem	129
1	Introduction.....	129
2	Basic Laws of Probability.....	129
3	The Needle Problem.....	131
4	Variations on a Theme.....	133
5	Monte Carlo Simulation.....	135
6	Problems and Remarks.....	135
7	Further Reading and Projects.....	137
11	Optimal Location	141
1	Introduction.....	141
2	The Mathematical Model.....	141
3	Any Optimal Locations Lie in T^*	142
4	Optimal Locations on T	143
5	Optimal Locations in T_0^*	144
6	Uniqueness of the Optimal Location.....	146
7	Properties of the Optimal Location.....	147
8	Finding the Optimal Location.....	148
9	Successive Approximations.....	148
10	Related Problems.....	150
11	Problems and Remarks.....	152
12	Further Reading and Projects.....	153
12	Energy	157
1	Introduction.....	157
2	Kinetic Energy.....	157
3	Potential Energy.....	158
4	Conservation of Energy.....	159
5	Earth's Gravitational Field.....	161

6	Escape Velocity.....	162
7	Problems and Remarks.....	164
8	Further Reading and Projects.....	166
13	Springs and Pendulums	171
1	Introduction.....	171
2	Simple Harmonic Motion.....	171
3	A Vibrating Mass-Spring System.....	172
4	A Swinging Pendulum.....	174
5	Problems and Remarks.....	179
6	Further Reading and Projects.....	181
14	Kepler's Laws of Planetary Motion	187
1	Introduction.....	187
2	Kepler's Laws.....	187
3	Kepler's First Law.....	188
4	Kepler's Third Law.....	189
5	Kepler's Second Law.....	190
6	Central Forces and Kepler's Second Law.....	192
7	Problems and Remarks.....	193
8	Further Reading and Projects.....	196
15	Newton's Law of Universal Gravitation	199
1	Introduction.....	199
2	Preliminaries.....	199
3	Kepler's Third Law Revisited.....	200
4	Velocity and Acceleration in Polar Coordinates.....	201
5	The Law of Gravitation for the Solar System.....	202
6	The Law of Universal Gravitation.....	204
7	Problems and Remarks.....	205
8	Further Reading and Projects.....	207
16	From Newton To Kepler and Beyond	213
1	Introduction.....	213
2	Preliminaries.....	213
3	Orbits Lie on Conic Sections.....	214
4	Orbits, Periods, and Kepler's Third Law.....	216
5	Energy Considerations.....	217
6	Orbits, Initial Conditions, and Energy.....	218
7	Problems and Remarks.....	219
8	Further Reading and Projects.....	220
	Index	225
