

Contents

Acknowledgments	ix
Preface	xi
How to Use This Book	xv
Modifications for Liberal Arts and Topics Courses	xvi
I Appetizers (Before Calculus)	1
1 Precalculus	3
1.1 Using Parentheses with the Game of Telephone	5
1.2 Function Ball Toss	10
1.3 Mathematical Modeling Using Long-Exposure Photography	14
1.4 Function Composition Using Crackers and Cheese	18
1.5 Walking Function Transformations	22
1.6 Graphing Piecewise Functions with Feather Boas	27
1.7 Trigonometry Parameter Comparisons	31
II Main Courses (Calculus)	39
2 Differential Calculus	41
2.1 Adding Movement to Velocity Explorations with Ziplines	43
2.2 Creating Limit Windows with Index Cards	48
2.3 Extreme Values with Pipe Cleaners	51
2.4 Graphing Puzzles Using the First and Second Derivatives	54
2.5 Graphing Functions from Derivative Information Using Bendable Sticks	58
2.6 Spread the Word: Modeling Logistic Growth	62
2.7 Maximizing the Area of a Fenced in Region Using Bendable Sticks for Constraints	67
2.8 The Optimal Origami Box	70
3 Integral Calculus	75
3.1 Chewing Gum Riemann Sums	77
3.2 Paper Shredder Riemann Sums or Cut the Bunny	81
3.3 Estimating Calories in a Cookie with Riemann Sums	85

3.4	So Many Integration Techniques... Which to Use?	89
3.5	Centers of Mass of Candy Point Masses on a Plane	93
3.6	Volume Estimations with Fruit Cross Sections	97
3.7	Fun with Infinite Series	101
4	Multivariable Calculus	109
4.1	Physically Creating Three Dimensional Graphs	110
4.2	Building Functions of Two Variables with Cookies	115
4.3	Exploring Contours in the Physical World	120
4.4	Matching Photographs with Contour Lines	124
4.5	The Gold Mine: Tangent Plane Approximation Using Tangible Surfaces	128
4.6	Visualizing Second Order Partial Derivatives on a Football	132
4.7	Partial Derivatives, Gradients, and Lagrange Multipliers on a Pringles® Chip	136
4.8	Volume Estimation Using a Sheet Surface	140
4.9	Visualizing and Estimating the Mass of a Solid Using Multi-Colored Blocks	143
4.10	Using a Jack to Visualize the Right Hand Rule for Cross Products	148
4.11	Properties of Flux Using an Overhead Projector	151
4.12	Vector Analysis of a Pop-Up Page	155
III	Desserts (Upper Level Courses)	161
5	Sophomore / Junior Courses	163
5.1	Crowdsourcing to Create Slope Fields	165
5.2	Who's in My Differential Equations Club?	169
5.3	Population Modeling Using M&M's®	173
5.4	Modeling of Fishing and Restocking with Pennies	178
5.5	Modeling a Falling Column of Water	183
5.6	Using Linear Algebra Definitions to Find Your Team	187
5.7	Picturing Prime Factorization	190
5.8	Traffic Jam: A Lifesize Logic Puzzle	194
5.9	Living De Morgan's Laws	198
5.10	Using Circuits to Teach Truth Tables	202
5.11	Determining the Validity of an Argument Using True/False Cards	207
5.12	Proof Rearrangements	211
5.13	Properties of Functions on Finite Sets Using Candy	215
5.14	SET® in Combinatorics/Discrete Math	219
5.15	Human-Powered Computing	224
6	Junior / Senior Courses	229
6.1	Using Candy to Represent Equivalence Relations	231
6.2	Finding the GCD: Euclidean Disc Toss	235
6.3	Symmetry and Group Theory with Plastic Triangles	240
6.4	Finding Groups in a (New) Color Cube Puzzle	245
6.5	Acting Permutations	250
6.6	Nametags and Derangements: A Class Permutation	254
6.7	Discovering Catalan Numbers Using M&M's®	258

6.8	Walking the Seven Bridges of Königsberg	262
6.9	Designing Round-Robin Tournaments Using Yarn	266
6.10	Constructing Disjoint Hamiltonian Cycles of Complete Graphs Using Yarn	272
6.11	Exploring the ϵ - N Definition of Sequence Convergence with Yarn	277
6.12	Exploring the ϵ - δ Definition of Continuity	281
6.13	Walking Complex Functions	285
6.14	Graphing Complex Functions with Feather Boas	289
6.15	Exploring Knots	293

Indexes	297
Concept Index	297
Author Index	299
Main Ingredient Index	301
Course Index	303
