Preface	xi
Acknowledgements	xii
Permissions and Credits	xiii
Part 1 Introduction	1
1 Teaching and Learning with Primary Sources Projects	3
1.1 Why Primary Source Projects (PSPs)?	3
1.2 PSP Structure, Design, and Availability	4
1.3 Classroom Implementation of PSPs	5
1.4 Some Challenges and Additional Benefits of PSPs	8
1.5 PSPs in this Collection	10
1.6 Suggestions for Further Reading	14
Bibliography	15
2 PSP Summaries: The Collection at a Glance	17
2.1 Real Analysis	17
2.2 Topology	21
2.3 Complex Variables	23
3 Historical Overview	25
3.1 Sociocultural Context	25
3.2 Mathematical Trends	36
3.3 Suggestions for Further Reading	61
Bibliography	62
Part 2 Real Analysis	71
4 Why Be So Critical? Nineteenth-Century Mathematics and the Origins of Analysis	73
4.1 The Problem with Analysis: Bolzano, Cauchy, and Dedekind	74

4.2	Niels Abel: “Hold your laughter, friends!”	77
4.3	Conclusion	80
	Bibliography	81
	Notes to Instructors	82
	Summary Discussion Notes	84
5	Investigations into Bolzano’s Bounded Set Theorem	87
5.1	Bolzano’s Property S for Series	88
5.2	Bolzano’s Bounded Set Theorem	91
5.3	Applications of Bolzano’s Bounded Set Theorem	101
5.4	Conclusion	102
	Bibliography	102
	Notes to Instructors	103
6	Stitching Dedekind Cuts to Construct the Real Numbers	105
6.1	Dedekind Laments	107
6.2	Dedekind Acts	107
6.3	Dedekind Stitches	111
	Bibliography	118
	Notes to Instructors	118
7	Investigations into d’Alembert’s Definition of Limit	121
7.1	D’Alembert’s Limit Definition	122
7.2	Limit Properties	125
7.3	Conclusion	126
	Bibliography	126
	Notes to Instructors	127
8	Bolzano on Continuity and the Intermediate Value Theorem	129
8.1	Bolzano’s Definition of Continuity	130
8.2	Bolzano’s Bounded Set Theorem	133
8.3	An Application of Bolzano’s Bounded Set Theorem	134
8.4	Conclusion	138
	Bibliography	139
	Notes to Instructors	139
9	Understanding Compactness: Early Work, Uniform Continuity to the Heine-Borel Theorem	143
9.1	Uniform Continuity: Some History and Basic Results	144
9.2	An Early Precursor of Compactness: Dirichlet and the Uniform Continuity Theorem	147
9.3	Borel’s Theorem and Lebesgue’s Extension	154

9.4	The Open Cover Definition of Compactness	160
	Bibliography	163
	Notes to Instructors	164
10	An Introduction to a Rigorous Definition of Derivative	169
10.1	Early Approaches to the Derivative Concept	169
10.2	Cauchy's Definition of Derivative	172
10.3	Conclusion	176
	Bibliography	177
	Notes to Instructors	177
11	Rigorous Debates over Debatable Rigor: Monster Functions in Introductory Analysis	179
11.1	Gaston Darboux: Student, Teacher, and Editor <i>par excellence</i>	180
11.2	Monsters in the Darboux-Hoüel Correspondence	182
11.3	Defining Differentiability	185
11.4	Monsters in Darboux's Published Works in Analysis	190
11.5	The Monster Debate Revisited	195
	Bibliography	196
	Notes to Instructors	197
12	The Mean Value Theorem	203
12.1	Introduction	203
12.2	Cauchy's Mean Value Theorem	205
12.3	Bonnet's Version of the Mean Value Theorem	210
12.4	Conclusion	216
	Bibliography	216
	Notes to Instructor	217
13	Euler's Rediscovery of e	221
13.1	Euler's Definition of e	222
13.2	A Sequence Expression for e	225
13.3	Conclusion	226
	Bibliography	227
	Notes to Instructors	227
14	Abel and Cauchy on a Rigorous Approach to Infinite Series	229
14.1	Some Background	230
14.2	Cauchy on Infinite Series	233
14.3	Abel's 1826 Paper	246
14.4	Conclusion	255
	Bibliography	256

Notes to Instructor	257
15 The Definite Integrals of Cauchy and Riemann	261
15.1 Introduction	261
15.2 Cauchy's Definite Integral	264
15.3 Riemann's Definite Integral	271
15.4 Conclusion	276
15.5 Appendix: The $\text{Fluc}(f, \mathcal{P})$ Sufficiency Condition	277
Bibliography	279
Notes to Instructor	279
16 Lebesgue on the Development of the Integral Concept	283
16.1 Shortcomings of the Riemann Integral: A First Glimpse	284
16.2 The History of the Integral Concept According to Lebesgue	286
16.3 Enter Lebesgue!	289
16.4 Epilogue	295
Bibliography	296
Notes to Instructors	297
Part 3 Topology	303
17 The Cantor Set before Cantor	305
17.1 Some Background	305
17.2 Two Examples	307
17.3 A Very Discontinuous Integrable Function	311
17.4 Conclusion	311
Bibliography	312
Notes to Instructors	312
18 Topology from Analysis	315
18.1 Some Background	315
18.2 Limit Points and Derived Sets	317
18.3 Main Result	320
18.4 Conclusion	321
Bibliography	321
Notes to Instructors	321
19 Nearness without Distance	325
19.1 Cantor: The Real Line	326
19.2 Borel: More General Objects	338
19.3 Hausdorff: Metric and Topological Spaces	342
19.4 Conclusion	349

Bibliography	350
Notes to Instructors	351
20 Connectedness: Its Evolution and Applications	353
20.1 Cantor: The Dawn of Connectedness	354
20.2 Schoenflies: The Abandonment of Distance	361
20.3 Lennes: The Modern Definition	364
20.4 Knaster and Kuratowski: Connectedness <i>qua</i> Connectedness	365
20.5 Invariance of Domain for $n = 1$	368
Bibliography	369
Notes to Instructors	370
21 Connecting Connectedness	373
21.1 Cantor: A Continuum	373
21.2 Jordan: Distance between Sets	376
21.3 Schoenflies: No Distance Required	377
21.4 Lennes: The Modern Definition	377
21.5 Conclusion	378
Bibliography	379
Notes to Instructors	379
22 From Sets to Metric Spaces to Topological Spaces	383
22.1 Set Theory	384
22.2 Metric Spaces	386
22.3 Topological Spaces	388
22.4 Conclusion	389
Bibliography	390
Notes to Instructors	390
23 The Closure Operation as the Foundation of Topology	393
23.1 Closed Sets and Closure	394
23.2 Kuratowski on the Closure Axioms	395
Bibliography	398
Notes to Instructors	398
24 A Compact Introduction to a Generalized Extreme Value Theorem	401
24.1 Fréchet on Compactness	402
24.2 Conclusion	406
Bibliography	407
Notes to Instructors	407

Part 4 Complex Variables	411
25 The Logarithm of -1	413
25.1 Functions with Several Values?	414
25.2 Extending the Domain of the Logarithm	414
25.3 The Beginning of a Conflict	415
25.4 The Fight Escalates	416
25.5 The Formalization of the Logarithm Function	418
Bibliography	419
Notes to Instructors	419
26 Riemann's Development of the Cauchy-Riemann Equations	421
26.1 Riemann on Differentiable Complex Functions	422
26.2 Some Modern Reflections on Differentiability	427
Bibliography	428
Notes to Instructors	429
27 Gauss and Cauchy on Complex Integration	431
27.1 Gauss's Letter on Complex Integration	431
27.2 Cauchy's Definition of Complex Integration	433
27.3 Conclusion	439
Bibliography	439
Notes to Instructors	440
