

Contents

Preface	vii
Introduction	xi
Part 1. Presheaves with Transfers	1
Lecture 1. The category of finite correspondences	3
Appendix 1A. The category $Cors$	7
Lecture 2. Presheaves with transfers	13
Homotopy invariant presheaves	17
Lecture 3. Motivic cohomology	21
Lecture 4. Weight one motivic cohomology	25
Lecture 5. Relation to Milnor K -Theory	29
Part 2. Étale Motivic Theory	35
Lecture 6. Étale sheaves with transfers	37
Lecture 7. The relative Picard group and Suslin's Rigidity Theorem	47
Lecture 8. Derived tensor products	55
Appendix 8A. Tensor triangulated categories	63
Lecture 9. \mathbb{A}^1 -weak equivalence	67
Étale \mathbb{A}^1 -local complexes	71
Lecture 10. Étale motivic cohomology and algebraic singular homology	75
Part 3. Nisnevich Sheaves with Transfers	81
Lecture 11. Standard triples	83
Lecture 12. Nisnevich sheaves	89
The cdh topology	94

Lecture 13. Nisnevich sheaves with transfers	99
Cdh sheaves with transfers	105
Part 4. The Triangulated Category of Motives	107
Lecture 14. The category of motives	109
Nisnevich \mathbb{A}^1 -local complexes	111
Motives with \mathbb{Q} -coefficients	116
Lecture 15. The complex $\mathbb{Z}(n)$ and \mathbb{P}^n	119
Lecture 16. Equidimensional cycles	125
Motives with compact support	128
Part 5. Higher Chow Groups	133
Lecture 17. Higher Chow groups	135
Appendix 17A. Cycle maps	143
Lecture 18. Higher Chow groups and equidimensional cycles	149
Appendix 18A. Generic equidimensionality	155
Lecture 19. Motivic cohomology and higher Chow groups	159
Lecture 20. Geometric motives	167
Part 6. Zariski Sheaves with Transfers	173
Lecture 21. Covering morphisms of triples	175
Lecture 22. Zariski sheaves with transfers	183
Lecture 23. Contractions	191
Lecture 24. Homotopy invariance of cohomology	197
Bibliography	203
Glossary	207
Index	211
