Chapter 1. Introduction	1
1.1. Outline of the proof	4
1.2. Outline of manuscript	8
1.3. Other approaches	8
1.4. Acknowledgements	10
Part 1. GEOMETRIC AND ANALYTIC RESULTS FOR RICCI FLOW WITH SURGERY	11
Chapter 2. Ricci flow with surgery	13
2.1. The standard solution and surgery	14
2.2. Main existence theorem	15
2.3. Review of notation and definitions	17
2.4. Geometric limits of Ricci flows	21
Chapter 3. Limits as $t \rightarrow \infty$	25
3.1. Preliminary estimates on curvature and volume	25
3.2. Three propositions	29
3.3. The hyperbolic pieces	30
3.4. Locally volume collapsed part of the $(M_t, g(t))$	39
Chapter 4. Local results valid for large time	41
4.1. First local result	41
4.2. Second local result	66
4.3. A corollary	77
Chapter 5. Proofs of the three propositions	79
5.1. Proof of Proposition 3.2.4	79
5.2. Proof of Proposition 3.2.3	85
5.3. Proof of Proposition 3.2.1	86
Part 2. LOCALLY VOLUME COLLAPSED 3-MANIFOLDS	93
Chapter 6. Introduction to Part II	95
6.1. Seifert fibered manifolds and graph manifolds	95
6.2. The statement	97
6.3. Stronger results	99

Chapter 7. The collapsing theorem	101
7.1. First remarks	101
7.2. The collapsing theorem	103
7.3. Proof that Theorem 7.2.1 implies Theorem 6.2.1	103
Chapter 8. Overview of the rest of the argument	107
Chapter 9. Basics of Gromov-Hausdorff convergence	111
9.1. Limits of compact metric spaces	111
9.2. Limits of complete metric spaces	113
9.3. Manifolds with curvature bounded below	113
Chapter 10. Basics of Alexandrov spaces	117
10.1. Properties of comparison angles	117
10.2. Alexandrov spaces of curvature ≥ 0	119
10.3. Strainers	124
10.4. Alexandrov balls	125
10.5. The tangent cone	127
10.6. Consequences of the existence of tangent cones	128
10.7. Directional derivatives	131
10.8. Blow-up results	135
10.9. Gromov-Hausdorff limits of balls in the M_n	139
Chapter 11. 2-dimensional Alexandrov spaces	141
11.1. Basics	141
11.2. The interior	146
11.3. The boundary	149
11.4. The covering	153
11.5. Transition between the 2- and 1-dimensional parts	161
Chapter 12. 3-dimensional analogues	163
12.1. Regions of M near generic 2-dimensional points	164
12.2. The global S^1 -fibration	168
12.3. Balls centered at points of ∂M_n	173
12.4. The interior cone points	175
12.5. Near almost flat boundary points	180
12.6. Boundary points of angle $\leq \pi - \delta$	190
12.7. Balls near open intervals	196
12.8. Determination of the constants	200
Chapter 13. The global result	205
13.1. Part of M close to intervals	205
13.2. Part of M near 2-dimensional Alexandrov spaces	212
13.3. Fixing the 3-balls and attaching solid cylinders	218
13.4. ϵ -chains	221

13.5.	The Seifert fibration containing $W_2 \setminus \cup_i U(C_i)$	230
13.6.	Deforming the boundary of W_2	232
13.7.	Removing solid tori and solid cylinders from W_2	239
13.8.	Completion of the proof	241
Part 3.	THE EQUIVARIANT CASE	243
Chapter 14.	The equivariant case	245
14.1.	The statement	245
14.2.	Preliminary results on compact group actions	246
14.3.	Actions on canonical neighborhoods	251
14.4.	Equivariant Ricci flow with surgery	261
14.5.	Proof of Theorem 14.1.4.	271
