Preface to the second edition	ix
Preface	xi
Chapter 1. Introduction	1
1.1. Symplectic manifolds	1
1.2. Moduli spaces: regularity and compactness	4
1.3. Evaluation maps and pseudocycles	7
1.4. The Gromov–Witten invariants	10
1.5. Applications and further developments	13
Chapter 2. $J$ -holomorphic Curves	17
2.1. Almost complex structures	17
2.2. The nonlinear Cauchy-Riemann equations	19
2.3. Unique continuation	21
2.4. Critical points	26
2.5. Somewhere injective curves	30
2.6. The adjunction inequality	35
Chapter 3. Moduli Spaces and Transversality	39
3.1. Moduli spaces of simple curves	39
3.2. Transversality	49
3.3. A regularity criterion	56
3.4. Curves with pointwise constraints	61
3.5. Implicit function theorem	68
Chapter 4. Compactness	75
4.1. Energy	76
4.2. The bubbling phenomenon	80
4.3. The mean value inequality	85
4.4. The isoperimetric inequality	91
4.5. Removal of singularities	96
4.6. Convergence modulo bubbling	99
4.7. Bubbles connect	105
Chapter 5. Stable Maps	115
5.1. Stable maps	115
5.2. Gromov convergence	122
5.3. Gromov compactness	126
5.4. Uniqueness of the limit	134
5.5. Gromov compactness for stable maps	139

5.6. The Gromov topology	147
Chapter 6. Moduli Spaces of Stable Maps	153
6.1. Simple stable maps	155
6.2. Transversality for simple stable maps	158
6.3. Transversality for evaluation maps	165
6.4. Semipositivity	168
6.5. Pseudocycles	171
6.6. Gromov–Witten pseudocycles	177
6.7. The pseudocycle of graphs	182
Chapter 7. Gromov–Witten Invariants	201
7.1. Counting pseudoholomorphic spheres	203
7.2. Variations on the definition	210
7.3. Counting pseudoholomorphic graphs	220
7.4. Rational curves in projective spaces	225
7.5. Axioms for Gromov–Witten invariants	239
Chapter 8. Hamiltonian Perturbations	257
8.1. Trivial bundles	258
8.2. Locally Hamiltonian fibrations	264
8.3. Pseudoholomorphic sections	270
8.4. Pseudoholomorphic spheres in the fiber	277
8.5. The pseudocycle of sections	279
8.6. Counting pseudoholomorphic sections	285
Chapter 9. Applications in Symplectic Topology	295
9.1. Periodic orbits of Hamiltonian systems	296
9.2. Obstructions to Lagrangian embeddings	310
9.3. The nonsqueezing theorem	323
9.4. Symplectic 4-manifolds	329
9.5. The group of symplectomorphisms	344
9.6. Hofer geometry	353
9.7. Distinguishing symplectic structures	359
Chapter 10. Gluing	369
10.1. The gluing theorem	370
10.2. Connected sums of $J$ -holomorphic curves	373
10.3. Weighted norms	376
10.4. Cutoff functions	380
10.5. Construction of the gluing map	382
10.6. The derivative of the gluing map	392
10.7. Surjectivity of the gluing map	400
10.8. Proof of the splitting axiom	406
10.9. The gluing theorem revisited	413
Chapter 11. Quantum Cohomology	417
11.1. The small quantum cohomology ring	418
11.2. The Gromov–Witten potential	436
11.3. Four examples	442

11.4.	The Seidel representation	467
11.5.	Frobenius manifolds	478
Chapter 12.	Floer Homology	487
12.1.	Floer's cochain complex	488
12.2.	Ring structure	499
12.3.	Poincaré duality	503
12.4.	Spectral invariants	505
12.5.	The Seidel representation	514
12.6.	Donaldson's quantum category	519
12.7.	The symplectic vortex equations	524
Appendix A.	Fredholm Theory	531
A.1.	Fredholm theory	531
A.2.	Determinant line bundles	533
A.3.	The implicit function theorem	538
A.4.	Finite dimensional reduction	545
A.5.	The Sard–Smale theorem	547
Appendix B.	Elliptic Regularity	549
B.1.	Sobolev spaces	549
B.2.	The Calderon–Zygmund inequality	562
B.3.	Regularity for the Laplace operator	568
B.4.	Elliptic bootstrapping	571
Appendix C.	The Riemann–Roch Theorem	579
C.1.	Cauchy–Riemann operators	579
C.2.	Elliptic estimates	586
C.3.	The boundary Maslov index (by Joel Robbin)	593
C.4.	Proof of the Riemann–Roch theorem	598
C.5.	The Riemann mapping theorem	604
C.6.	Nonsmooth bundles	613
C.7.	Almost complex structures	614
Appendix D.	Stable Curves of Genus Zero	619
D.1.	Möbius transformations and cross ratios	619
D.2.	Trees, labels, and splittings	622
D.3.	Stable curves	629
D.4.	The Grothendieck–Knudsen manifold	631
D.5.	The Gromov topology	640
D.6.	Cohomology	643
D.7.	Examples	648
Appendix E.	Singularities and Intersections (written with Laurent Lazzarini)	653
E.1.	The main results	654
E.2.	Positivity of intersections	658
E.3.	Integrability	664
E.4.	The Hartman–Wintner theorem	668
E.5.	Local behaviour	673

E.6. Contact between branches	678
E.7. Singularities of $J$ -holomorphic curves	686
Bibliography	695
List of Symbols	711
Index	715
