Preface	xiii
Chapter 1. Geometry and topology	1
1.1. Set-theoretic preliminaries	1
1.1.1. General notation	1
1.1.2. Growth rates of functions	2
1.1.3. Jensen's inequality	3
1.2. Measure and integral	3
1.2.1. Measures	3
1.2.2. Finitely additive integrals	5
1.3. Topological spaces. Lebesgue covering dimension	7
1.4. Exhaustions of locally compact spaces	10
1.5. Direct and inverse limits	11
1.6. Graphs	13
1.7. Complexes and homology	17
1.7.1. Simplicial complexes	17
1.7.2. Cell complexes	19
Chapter 2. Metric spaces	23
2.1. General metric spaces	23
2.2. Length metric spaces	25
2.3. Graphs as length spaces	27
2.4. Hausdorff and Gromov–Hausdorff distances. Nets	28
2.5. Lipschitz maps and Banach–Mazur distance	30
2.5.1. Lipschitz and locally Lipschitz maps	30
2.5.2. Bi-Lipschitz maps. The Banach–Mazur distance	33
2.6. Hausdorff dimension	34
2.7. Norms and valuations	35
2.8. Norms on field extensions. Adeles	39
2.9. Metrics on affine and projective spaces	43
2.10. Quasiprojective transformations. Proximal transformations	48
2.11. Kernels and distance functions	51
Chapter 3. Differential geometry	59
3.1. Smooth manifolds	59
3.2. Smooth partition of unity	61
3.3. Riemannian metrics	61
3.4. Riemannian volume	64
3.5. Volume growth and isoperimetric functions. Cheeger constant	68
3.6. Curvature	71

3.7.	Riemannian manifolds of bounded geometry	73
3.8.	Metric simplicial complexes of bounded geometry and systolic inequalities	74
3.9.	Harmonic functions	79
3.10.	Spectral interpretation of the Cheeger constant	82
3.11.	Comparison geometry	82
3.11.1.	Alexandrov curvature and $CAT(\kappa)$ spaces	82
3.11.2.	Cartan's Fixed-Point Theorem	86
3.11.3.	Ideal boundary, horoballs and horospheres	88
Chapter 4.	Hyperbolic space	91
4.1.	Moebius transformations	91
4.2.	Real-hyperbolic space	94
4.3.	Classification of isometries	99
4.4.	Hyperbolic trigonometry	102
4.5.	Triangles and curvature of $\mathbb{H}^n$	105
4.6.	Distance function on $\mathbb{H}^n$	108
4.7.	Hyperbolic balls and spheres	110
4.8.	Horoballs and horospheres in $\mathbb{H}^n$	110
4.9.	$\mathbb{H}^n$ as a symmetric space	112
4.10.	Inscribed radius and thinness of hyperbolic triangles	116
4.11.	Existence-uniqueness theorem for triangles	118
Chapter 5.	Groups and their actions	119
5.1.	Subgroups	120
5.2.	Virtual isomorphisms of groups and commensurators	122
5.3.	Commutators and the commutator subgroup	124
5.4.	Semidirect products and short exact sequences	126
5.5.	Direct sums and wreath products	128
5.6.	Geometry of group actions	129
5.6.1.	Group actions	129
5.6.2.	Linear actions	133
5.6.3.	Lie groups	134
5.6.4.	Haar measure and lattices	137
5.6.5.	Geometric actions	140
5.7.	Zariski topology and algebraic groups	140
5.8.	Group actions on complexes	147
5.8.1.	$G$ -complexes	147
5.8.2.	Borel and Haefliger constructions	148
5.8.3.	Groups of finite type	159
5.9.	Cohomology	160
5.9.1.	Group rings and modules	160
5.9.2.	Group cohomology	161
5.9.3.	Bounded cohomology of groups	165
5.9.4.	Ring derivations	166
5.9.5.	Derivations and split extensions	168
5.9.6.	Central coextensions and second cohomology	171

Chapter 6. Median spaces and spaces with measured walls	175
6.1. Median spaces	175
6.1.1. A review of median algebras	176
6.1.2. Convexity	177
6.1.3. Examples of median metric spaces	178
6.1.4. Convexity and gate property in median spaces	180
6.1.5. Rectangles and parallel pairs	182
6.1.6. Approximate geodesics and medians; completions of median spaces	185
6.2. Spaces with measured walls	186
6.2.1. Definition and basic properties	186
6.2.2. Relationship between median spaces and spaces with measured walls	189
6.2.3. Embedding a space with measured walls in a median space	190
6.2.4. Median spaces have measured walls	192
Chapter 7. Finitely generated and finitely presented groups	199
7.1. Finitely generated groups	199
7.2. Free groups	203
7.3. Presentations of groups	206
7.4. The rank of a free group determines the group. Subgroups	212
7.5. Free constructions: Amalgams of groups and graphs of groups	213
7.5.1. Amalgams	213
7.5.2. Graphs of groups	214
7.5.3. Converting graphs of groups into amalgams	216
7.5.4. Topological interpretation of graphs of groups	216
7.5.5. Constructing finite index subgroups	217
7.5.6. Graphs of groups and group actions on trees	219
7.6. Ping-pong lemma. Examples of free groups	222
7.7. Free subgroups in $SU(2)$	226
7.8. Ping-pong on projective spaces	226
7.9. Cayley graphs	227
7.10. Volumes of maps of cell complexes and Van Kampen diagrams	235
7.10.1. Simplicial, cellular and combinatorial volumes of maps	235
7.10.2. Topological interpretation of finite-presentability	236
7.10.3. Presentations of central coextensions	236
7.10.4. Dehn function and van Kampen diagrams	238
7.11. Residual finiteness	244
7.12. Hopfian and co-hopfian properties	247
7.13. Algorithmic problems in the combinatorial group theory	248
Chapter 8. Coarse geometry	251
8.1. Quasiisometry	251
8.2. Group-theoretic examples of quasiisometries	261
8.3. A metric version of the Milnor-Schwarz Theorem	267
8.4. Topological coupling	269
8.5. Quasiactions	271
8.6. Quasiisometric rigidity problems	274
8.7. The growth function	275

8.8.	Codimension one isoperimetric inequalities	281
8.9.	Distortion of a subgroup in a group	283
Chapter 9.	Coarse topology	287
9.1.	Ends	287
9.1.1.	The number of ends	287
9.1.2.	The space of ends	290
9.1.3.	Ends of groups	295
9.2.	Rips complexes and coarse homotopy theory	297
9.2.1.	Rips complexes	297
9.2.2.	Direct system of Rips complexes and coarse homotopy	299
9.3.	Metric cell complexes	300
9.4.	Connectivity and coarse connectivity	306
9.5.	Retractions	312
9.6.	Poincaré duality and coarse separation	314
9.7.	Metric filling functions	317
9.7.1.	Coarse isoperimetric functions and coarse filling radius	318
9.7.2.	Quasiisometric invariance of coarse filling functions	320
9.7.3.	Higher Dehn functions	325
9.7.4.	Coarse Besikovitch inequality	330
Chapter 10.	Ultralimits of metric spaces	333
10.1.	The Axiom of Choice and its weaker versions	333
10.2.	Ultrafilters and the Stone-Čech compactification	339
10.3.	Elements of non-standard algebra	340
10.4.	Ultralimits of families of metric spaces	344
10.5.	Completeness of ultralimits and incompleteness of ultrafilters	348
10.6.	Asymptotic cones of metric spaces	352
10.7.	Ultralimits of asymptotic cones are asymptotic cones	356
10.8.	Asymptotic cones and quasiisometries	358
10.9.	Assouad-type theorems	360
Chapter 11.	Gromov-hyperbolic spaces and groups	363
11.1.	Hyperbolicity according to Rips	363
11.2.	Geometry and topology of real trees	367
11.3.	Gromov hyperbolicity	368
11.4.	Ultralimits and stability of geodesics in Rips-hyperbolic spaces	372
11.5.	Local geodesics in hyperbolic spaces	376
11.6.	Quasiconvexity in hyperbolic spaces	379
11.7.	Nearest-point projections	381
11.8.	Geometry of triangles in Rips-hyperbolic spaces	382
11.9.	Divergence of geodesics in hyperbolic metric spaces	385
11.10.	Morse Lemma revisited	387
11.11.	Ideal boundaries	390
11.12.	Gromov bordification of Gromov-hyperbolic spaces	398
11.13.	Boundary extension of quasiisometries of hyperbolic spaces	402
11.13.1.	Extended Morse Lemma	402
11.13.2.	The extension theorem	404
11.13.3.	Boundary extension and quasiactions	406

11.13.4.	Conical limit points of quasiactions	407
11.14.	Hyperbolic groups	407
11.15.	Ideal boundaries of hyperbolic groups	410
11.16.	Linear isoperimetric inequality and Dehn algorithm for hyperbolic groups	414
11.17.	The small cancellation theory	417
11.18.	The Rips construction	418
11.19.	Central coextensions of hyperbolic groups and quasiisometries	419
11.20.	Characterization of hyperbolicity using asymptotic cones	423
11.21.	Size of loops	429
11.21.1.	The minsize	429
11.21.2.	The constriction	430
11.22.	Filling invariants of hyperbolic spaces	432
11.22.1.	Filling area	433
11.22.2.	Filling radius	434
11.22.3.	Orders of Dehn functions of non-hyperbolic groups and higher Dehn functions	437
11.23.	Asymptotic cones, actions on trees and isometric actions on hyperbolic spaces	438
11.24.	Summary of equivalent definitions of hyperbolicity	441
11.25.	Further properties of hyperbolic groups	442
11.26.	Relatively hyperbolic spaces and groups	445
Chapter 12.	Lattices in Lie groups	449
12.1.	Semisimple Lie groups and their symmetric spaces	449
12.2.	Lattices	451
12.3.	Examples of lattices	452
12.4.	Rigidity and superrigidity	454
12.5.	Commensurators of lattices	456
12.6.	Lattices in $PO(n, 1)$	456
12.6.1.	Zariski density	456
12.6.2.	Parabolic elements and non-compactness	458
12.6.3.	Thick-thin decomposition	460
12.7.	Central coextensions	462
Chapter 13.	Solvable groups	465
13.1.	Free abelian groups	465
13.2.	Classification of finitely generated abelian groups	468
13.3.	Automorphisms of $\mathbb{Z}^n$	471
13.4.	Nilpotent groups	474
13.5.	Polycyclic groups	484
13.6.	Solvable groups: Definition and basic properties	489
13.7.	Free solvable groups and the Magnus embedding	491
13.8.	Solvable versus polycyclic	493
Chapter 14.	Geometric aspects of solvable groups	497
14.1.	Wolf's Theorem for semidirect products $\mathbb{Z}^n \rtimes \mathbb{Z}$	497
14.1.1.	Geometry of $H_3(\mathbb{Z})$	499
14.1.2.	Distortion of subgroups of solvable groups	503

14.1.3.	Distortion of subgroups in nilpotent groups	505
14.2.	Polynomial growth of nilpotent groups	514
14.3.	Wolf's Theorem	515
14.4.	Milnor's Theorem	517
14.5.	Failure of QI rigidity for solvable groups	520
14.6.	Virtually nilpotent subgroups of $GL(n)$	521
14.7.	Discreteness and nilpotence in Lie groups	524
14.7.1.	Some useful linear algebra	524
14.7.2.	Zassenhaus neighborhoods	525
14.7.3.	Jordan's Theorem	528
14.8.	Virtually solvable subgroups of $GL(n, \mathbb{C})$	530
Chapter 15.	The Tits Alternative	537
15.1.	Outline of the proof	538
15.2.	Separating sets	540
15.3.	Proof of the existence of free subsemigroups	541
15.4.	Existence of very proximal elements: Proof of Theorem 15.6	541
15.4.1.	Proximality criteria	542
15.4.2.	Constructing very proximal elements	543
15.5.	Finding ping-pong partners: Proof of Theorem 15.7	545
15.6.	The Tits Alternative without finite generation assumption	546
15.7.	Groups satisfying the Tits Alternative	547
Chapter 16.	Gromov's Theorem	549
16.1.	Topological transformation groups	549
16.2.	Regular Growth Theorem	551
16.3.	Consequences of the Regular Growth Theorem	555
16.4.	Weakly polynomial growth	556
16.5.	Displacement function	557
16.6.	Proof of Gromov's Theorem	558
16.7.	Quasiisometric rigidity of nilpotent and abelian groups	561
16.8.	Further developments	562
Chapter 17.	The Banach–Tarski Paradox	565
17.1.	Paradoxical decompositions	565
17.2.	Step 1: A paradoxical decomposition of the free group $F_2$	568
17.3.	Step 2: The Hausdorff Paradox	569
17.4.	Step 3: Spheres of dimension $\geq 2$ are paradoxical	570
17.5.	Step 4: Euclidean unit balls are paradoxical	571
Chapter 18.	Amenability and paradoxical decomposition	573
18.1.	Amenable graphs	573
18.2.	Amenability and quasiisometry	578
18.3.	Amenability of groups	583
18.4.	Følner Property	588
18.5.	Amenability, paradoxality and the Følner Property	592
18.6.	Supramenability and weakly paradoxical actions	596
18.7.	Quantitative approaches to non-amenable and weak paradoxality	601
18.8.	Uniform amenability and ultrapowers	606

18.9.	Quantitative approaches to amenability	608
18.10.	Summary of equivalent definitions of amenability	612
18.11.	Amenable hierarchy	613
Chapter 19.	Ultralimits, fixed-point properties, proper actions	615
19.1.	Classes of Banach spaces stable with respect to ultralimits	615
19.2.	Limit actions and point-selection theorem	620
19.3.	Properties for actions on Hilbert spaces	625
19.4.	Kazhdan's Property (T) and the Haagerup Property	627
19.5.	Groups acting non-trivially on trees do not have Property (T)	633
19.6.	Property FH, a-T-menability, and group actions on median spaces	636
19.7.	Fixed-point property and proper actions for $L^p$ -spaces	639
19.8.	Groups satisfying Property (T) and the spectral gap	641
19.9.	Failure of quasiisometric invariance of Property (T)	643
19.10.	Summary of examples	644
Chapter 20.	The Stallings Theorem and accessibility	647
20.1.	Maps to trees and hyperbolic metrics on 2-dimensional simplicial complexes	647
20.2.	Transversal graphs and Dunwoody tracks	652
20.3.	Existence of minimal Dunwoody tracks	656
20.4.	Properties of minimal tracks	659
20.4.1.	Stationarity	659
20.4.2.	Disjointness of essential minimal tracks	661
20.5.	The Stallings Theorem for almost finitely presented groups	664
20.6.	Accessibility	666
20.7.	QI rigidity of virtually free groups and free products	671
Chapter 21.	Proof of Stallings' Theorem using harmonic functions	675
21.1.	Proof of Stallings' Theorem	677
21.2.	Non-amenability	681
21.3.	An existence theorem for harmonic functions	683
21.4.	Energy of minimum and maximum of two smooth functions	686
21.5.	A compactness theorem for harmonic functions	687
21.5.1.	Positive energy gap implies existence of an energy minimizer	687
21.5.2.	Some coarea estimates	690
21.5.3.	Energy comparison in the case of a linear isoperimetric inequality	692
21.5.4.	Proof of positivity of the energy gap	694
Chapter 22.	Quasiconformal mappings	697
22.1.	Linear algebra and eccentricity of ellipsoids	698
22.2.	Quasisymmetric maps	699
22.3.	Quasiconformal maps	701
22.4.	Analytical properties of quasiconformal mappings	702
22.4.1.	Some notions and results from real analysis	702
22.4.2.	Differentiability properties of quasiconformal mappings	705
22.5.	Quasisymmetric maps and hyperbolic geometry	712

Chapter 23. Groups quasiisometric to $\mathbb{H}^n$	717
23.1. Uniformly quasiconformal groups	718
23.2. Hyperbolic extension of uniformly quasiconformal groups	719
23.3. Least volume ellipsoids	720
23.4. Invariant measurable conformal structure	721
23.5. Quasiconformality in dimension 2	724
23.5.1. Beltrami equation	724
23.5.2. Measurable Riemannian metrics	725
23.6. Proof of Tukia's Theorem on uniformly quasiconformal groups	726
23.7. QI rigidity for surface groups	729
Chapter 24. Quasiisometries of non-uniform lattices in $\mathbb{H}^n$	733
24.1. Coarse topology of truncated hyperbolic spaces	734
24.2. Hyperbolic extension	738
24.3. Mostow Rigidity Theorem	739
24.4. Zooming in	743
24.5. Inverted linear mappings	745
24.6. Scattering	748
24.7. Schwartz Rigidity Theorem	750
Chapter 25. A survey of quasiisometric rigidity	753
25.1. Rigidity of symmetric spaces, lattices and hyperbolic groups	753
25.1.1. Uniform lattices	753
25.1.2. Non-uniform lattices	754
25.1.3. Symmetric spaces with Euclidean de Rham factors and Lie groups with nilpotent normal subgroups	756
25.1.4. QI rigidity for hyperbolic spaces and groups	757
25.1.5. Failure of QI rigidity	760
25.1.6. Rigidity of random groups	762
25.2. Rigidity of relatively hyperbolic groups	762
25.3. Rigidity of classes of amenable groups	764
25.4. Bi-Lipschitz vs. quasiisometric	767
25.5. Various other QI rigidity results and problems	769
Chapter 26. Appendix by Bogdan Nica: Three theorems on linear groups	777
26.1. Introduction	777
26.2. Virtual and residual properties of groups	778
26.3. Platonov's Theorem	778
26.4. Proof of Platonov's Theorem	780
26.5. The Idempotent Conjecture for linear groups	782
26.6. Proof of Formanek's criterion	783
26.7. Notes	785
Bibliography	787
Index	813
