Preface	ix
Chapter 1. Why are Geometric Representations Interesting?	1
1.1. Edge coloring	1
1.2. Disjoint paths	2
1.3. Hitting times	2
1.4. Shannon capacity	3
1.5. Vector-labeled graphs or frameworks?	6
Chapter 2. Planar Graphs	9
2.1. Graphs and maps	9
2.2. Straight line representation	14
Chapter 3. Rubber Bands	21
3.1. Energy, forces, and centers of gravity	21
3.2. Rubber bands, planarity and polytopes	23
3.3. Rubber bands and connectivity	31
Chapter 4. Discrete Harmonic Functions	39
4.1. Basics	39
4.2. Estimating harmonic functions	46
4.3. Inverting the Laplacian	50
Chapter 5. Coin Representation	57
5.1. Koebe's theorem	57
5.2. Formulation in space	64
5.3. Circle packing and the Riemann Mapping Theorem	69
5.4. Applications of coin representations	71
5.5. And more...	74
Chapter 6. Square Tilings	79
6.1. Electric current through a rectangle	79
6.2. Tangency graphs of square tilings	82
Chapter 7. Discrete Analytic Functions	91
7.1. Warmup: discrete analytic functions on the grid	92
7.2. Discrete analytic functions on planar graphs	97
7.3. Discrete holomorphic forms, a.k.a. rotation-free circulations	106
7.4. Global information from local observation	114
Chapter 8. Discrete Analytic Functions: Statistical Physics	119
8.1. Conformal invariance	119

8.2. Analytic functions and porch tilings	127
Chapter 9. Adjacency Matrix and its Square	137
9.1. Neighborhoods, rank and size	137
9.2. Regularity partitions	140
9.3. A-squared representation	145
Chapter 10. Orthogonal Representations: Dimension	151
10.1. Basics	151
10.2. Minimum dimension of orthonormal representations	153
10.3. General position and connectivity	154
10.4. Faithfulness	159
10.5. Transversality	161
10.6. The variety of orthogonal representations	171
Chapter 11. Orthogonal Representations: The Smallest Cone	183
11.1. The theta-function	183
11.2. Duality for theta	185
11.3. Computing the theta-function	193
11.4. Stable sets	198
11.5. Applications	206
Chapter 12. Orthogonal Representations: Quantum Physics	211
12.1. Preliminaries: quantum states and entanglement	211
12.2. Capacity of quantum channels	212
12.3. Hidden variables	215
12.4. Unextendible product bases	218
Chapter 13. Semidefinite Optimization	221
13.1. Linear and semidefinite programs	221
13.2. Geometric representations from semidefinite optimization	227
13.3. Maximum cut	231
13.4. The MAX-3SAT problem	236
Chapter 14. Stresses	239
14.1. Stresses and stress matrices	239
14.2. Braced stresses	246
14.3. Discrete Nodal Theorems	248
14.4. Braced stresses on polytopes	252
Chapter 15. Rigidity and Motions of Frameworks	259
15.1. Versions of rigidity	260
15.2. Infinitesimal motions	262
15.3. Generic frameworks	268
15.4. The realization space	278
15.5. Global rigidity	280
Chapter 16. The Colin de Verdière Number	289
16.1. Basics	289
16.2. Small values and nullspace representation	296
16.3. Linkless embeddings	304

16.4. Engaged representations	313
16.5. Related representations	318
Chapter 17. Metric Representations	321
17.1. Preserving distances	322
17.2. Respecting distances	325
17.3. Respecting the volume	331
17.4. Bandwidth	338
Chapter 18. Matching and Covering in Frameworks	343
18.1. Cover-critical ordinary graphs	344
18.2. Covering in frameworks	345
18.3. Matchings	355
Chapter 19. Combinatorics of Subspaces	363
19.1. Covering of hypergraphs and subspaces	363
19.2. Transcendence degree and transcendence rank	364
19.3. Generic points	369
19.4. Generic hyperplanes	373
19.5. Matroids	375
Chapter 20. Concluding Thoughts	383
20.1. Non-degeneracy	383
20.2. Duality	385
20.3. Very large graphs and their limits	386
20.4. Graphs and geometry	388
Appendix A. Linear Algebra	391
A.1. Vectors, matrices and vector labelings	391
A.2. Eigenvalues	392
A.3. Semidefinite matrices	393
A.4. Geometric spaces	395
A.5. Exterior algebra	400
Appendix B. Graphs	403
B.1. Basics	403
B.2. Flows and cuts	404
B.3. Matrices associated with graphs	405
B.4. Spectra of graphs	406
Appendix C. Convex Bodies	411
C.1. Polytopes and polyhedra	411
C.2. Polyhedral combinatorics	412
C.3. Polarity and variations	413
C.4. Balls, spheres and caps	416
C.5. Volume of convex bodies	417
Bibliography	421
Author Index	437
Subject Index	441
