Preface	ix
The plan of the book	x
Differences with other books	xi
Introduction	1
0.1. Two classical problems	1
Part 1. Foundations	5
Chapter 1. Noncommutative algebra	7
1.1. Noncommutative algebras	7
1.2. Semisimple modules	18
1.3. Finite-dimensional algebras	19
1.4. Noetherian rings	28
1.5. Localizations	30
1.6. Commutative algebra	32
Chapter 2. Universal algebra	37
2.1. Categories and functors	37
2.2. Varieties of algebras	46
2.3. Algebras with trace	56
2.4. The method of generic elements	61
2.5. Generalized identities	66
2.6. Matrices and the standard identity	69
Chapter 3. Symmetric functions and matrix invariants	75
3.1. Polarization	75
3.2. Symmetric functions	80
3.3. Matrix functions and invariants	86
3.4. The universal map into matrices	98
Chapter 4. Polynomial maps	109
4.1. Polynomial maps	109
4.2. The Schur algebra of the free algebra	115
Chapter 5. Azumaya algebras and irreducible representations	125
5.1. Irreducible representations	125
5.2. Faithfully flat descent	134
5.3. Projective modules	139
5.4. Separable and Azumaya algebras	146

Chapter 6. Tensor symmetry	165
6.1. Schur–Weyl duality	165
6.2. The symmetric group	169
6.3. The linear group	172
6.4. Characters	179
Part 2. Combinatorial aspects of polynomial identities	189
Chapter 7. Growth	191
7.1. Exponential bounds	191
7.2. The $A \otimes B$ theorem	195
7.3. Cocharacters of a PI algebra	198
7.4. Proper polynomials	202
7.5. Cocharacters are supported on a (k, ℓ) hook	205
7.6. Application: A theorem of Kemer	210
Chapter 8. Shirshov’s Height Theorem	213
8.1. Shirshov’s height theorem	213
8.2. Some applications of Shirshov’s height theorem	221
8.3. Gel’fand–Kirillov dimension	223
Chapter 9. 2×2 matrices	231
9.1. 2×2 matrices	231
9.2. Invariant ideals	246
9.3. The structure of generic 2×2 matrices	254
Part 3. The structure theorems	263
Chapter 10. Matrix identities	265
10.1. Basic identities	265
10.2. Central polynomials	270
10.3. The theorem of M. Artin on Azumaya algebras	278
10.4. Universal splitting	282
Chapter 11. Structure theorems	287
11.1. Nil ideals	287
11.2. Semisimple and prime PI algebras	291
11.3. Generic matrices	297
11.4. Affine algebras	300
11.5. Representable algebras	302
Chapter 12. Invariants and trace identities	313
12.1. Invariants of matrices	313
12.2. Representations of algebras with trace	323
12.3. The alternating central polynomials	331
Chapter 13. Involutions and matrices	345
13.1. Matrices with involutions	345
13.2. Symplectic and orthogonal case	348

Chapter 14. A geometric approach	359
14.1. Geometric invariant theory	359
14.2. The universal embedding into matrices	368
14.3. Semisimple representations of CH algebras	369
14.4. Geometry of generic matrices	378
14.5. Using Cayley–Hamilton algebras	384
14.6. The unramified locus and restriction maps	387
Chapter 15. Spectrum and dimension	393
15.1. Krull dimension	393
15.2. A theorem of Schelter	397
Part 4. The relatively free algebras	403
Chapter 16. The nilpotent radical	405
16.1. The Razmyslov–Braun–Kemer theorem	405
16.2. The theorem of Lewin	413
16.3. T -ideals of identities of block-triangular matrices	417
16.4. The theorem of Bergman and Lewin	420
Chapter 17. Finite-dimensional and affine PI algebras	429
17.1. Strategy	429
17.2. Kemer’s theory	431
17.3. The trace algebra	447
17.4. The representability theorem, Theorem 17.1.1	454
17.5. The abstract Cayley–Hamilton theorem	457
Chapter 18. The relatively free algebras	465
18.1. Rationality and a canonical filtration	465
18.2. Complements of commutative algebra and invariant theory	474
18.3. Applications to PI algebras	481
18.4. Model algebras	483
Chapter 19. Identities and superalgebras	487
19.1. The Grassmann algebra	487
19.2. Superalgebras	493
19.3. Graded identities	501
19.4. The role of the Grassmann algebra	504
19.5. Finitely generated PI superalgebras	512
19.6. The trace algebra	520
19.7. The representability theorem, Theorem 19.7.4	524
19.8. Grassmann envelope and finite-dimensional superalgebras	527
Chapter 20. The Specht problem	529
20.1. Standard and Capelli	529
20.2. Solution of the Specht’s problem	531
20.3. Verbally prime T -ideals	533
Chapter 21. The PI-exponent	541
21.1. The asymptotic formula	541
21.2. The exponent of an associative PI algebra	545

21.3. Growth of central polynomials	549
21.4. Beyond associative algebras	550
21.5. Beyond the PI exponent	553
Chapter 22. Codimension growth for matrices	555
22.1. Codimension growth for matrices	555
22.2. The codimension estimate for matrices	560
Chapter 23. Codimension growth for algebras satisfying a Capelli identity	573
23.1. PI algebras satisfying a Capelli identity	573
23.2. Special finite-dimensional algebras	593
Appendix A. The Golod–Shafarevich counterexamples	597
Bibliography	605
Index	623
Index of Symbols	629
