Preface	xiii
Chapter 1. Introduction	1
Chapter 2. A Bit of Physical Motivation	9
2.1. Introduction	9
2.2. Heat Conduction	9
2.3. Linear Waves	10
2.4. Quantum Mechanics	12
2.5. Notes	13
Chapter 3. Preliminaries on ODEs	15
3.1. Introduction	15
3.2. Initial Value Problems: Existence and Uniqueness, Variation of Constants Formula	15
3.3. The Green (or Lagrange) Identity, the Wronskian, and the Prüfer Transformation	20
3.4. On Fundamental Systems of Solutions	23
3.5. The Liouville–Green Transformation	28
3.6. Products of Two Solutions, Riccati Equation	32
3.7. Notes	33
Chapter 4. The Regular Problem on a Compact Interval $[a, b] \subset \mathbb{R}$	35
4.1. Introduction	35
4.2. Minimal and Maximal Operators	35
4.3. Self-Adjoint Extensions and Resolvents	39
4.4. Characterization of Eigenvalues, the Green’s Function, and the Connection to the Family of Spectral Projections of $T_{A,B}$	51
4.5. Strict Monotonicity of Dirichlet Ground States and Multiplicity of Eigenvalues	61
4.6. Eigenvectors From Eigenvalues: The Case of One-Dimensional Schrödinger Operators	71
4.7. Notes	80
Chapter 5. The Singular Problem on $(a, b) \subseteq \mathbb{R}$	83
5.1. Introduction	83
5.2. Minimal and Maximal Operators	83
5.3. The Weyl Alternative and the m -Function, Limit Circle and Limit Point Case	88
5.4. Deficiency Indices and Subspaces	94
5.5. Self-Adjoint Extensions and Resolvents	95

5.6. Conditions for the Limit Point and Limit Circle Case	117
5.7. Notes	125
Chapter 6. The Spectral Function for a Problem with a Regular Endpoint	129
6.1. Introduction	129
6.2. Weyl–Titchmarsh Theory and m -Functions	129
6.3. The Generalized Fourier or Eigenfunction Transform	135
6.4. Examples: Constant Coefficients, The Bessel and Generalized Bessel Operators on (a, ∞) , $a \in (0, \infty)$, Short-Range Scattering for Schrödinger Operators on the Half-Line $(0, \infty)$, Levinson’s Theorem	140
6.5. Notes	151
Chapter 7. The 2×2 Spectral Matrix Function in the Presence of Two Singular Interval Endpoints for the Problem on $(a, b) \subseteq \mathbb{R}$	153
7.1. Introduction	153
7.2. 2×2 Matrix-Valued M -Functions in the Limit Point Case at a and b	153
7.3. The Generalized Fourier or Eigenfunction Transform	160
7.4. Schrödinger Operator Examples: Constant Coefficients, N -Soliton Potentials, Short-Range Scattering on \mathbb{R} , Levinson’s Theorem, Higher-Order Trace Relations for KdV Invariants, Algebro- Geometric Finite-Gap Potentials, Genus One Lamé Potential	167
7.5. Periodic Coefficients and Floquet Theory	198
7.6. Reflectionless Potentials, the Sodin–Yuditskii Class $\text{SY}(\mathcal{E})$, and Some Variations of This Theme	221
7.7. Notes	237
Chapter 8. Classical Oscillation Theory, Principal Solutions, and Nonprincipal Solutions	245
8.1. Introduction	245
8.2. Some Elements of Classical Oscillation Theory	246
8.3. Principal and Nonprincipal Solutions	249
8.4. The Generalized Bessel Operator on $(0, b)$, $b \in (0, \infty) \cup \{\infty\}$, as an Illustration	277
8.5. The Sturm Comparison Theorem, More Limit Point Criteria, and a Povzner–Wienholtz-Type Self-Adjointness Result	280
8.6. Notes	293
Chapter 9. Renormalized Oscillation Theory	297
9.1. Introduction	297
9.2. Renormalized Oscillation Theory	298
9.3. Zeros of the Wronskian	301
9.4. $N_0 \leq W_0$ in the Regular Case: The Hare and the Tortoise	303
9.5. $N_0 \leq W_0$ in the General Case: Strong Limits	305
9.6. $N_0 \geq W_0$: A Variational Argument	307
9.7. Extensions, Comments, and Examples	308
9.8. Appendix: Sesquilinear Forms in the Regular Case	311
9.9. Notes	315

Chapter 10. Perturbative Oscillation Criteria and Perturbative Hardy-Type Inequalities	317
10.1. Introduction	317
10.2. On Factorizations of Second-Order Differential Expressions	318
10.3. A Generalization of Kneser's Oscillation Criterion	320
10.4. Perturbative Hardy-Type Inequalities	326
10.5. On Birman–Schwinger-Type Bounds	338
10.6. Notes	345
Chapter 11. Boundary Data Maps	349
11.1. Introduction	349
11.2. The Parametrization of All Self-Adjoint Regular Sturm–Liouville Operators	351
11.3. A Description of All Self-Adjoint Extensions of T_{min} in Terms of Krein's Resolvent Formula and the Friedrichs Resolvent With Emphasis on the Krein–von Neumann Extension	357
11.4. General Boundary Data Maps and Their Basic Properties	370
11.5. Trace Formulas, Symmetrized Perturbation Determinants, and Spectral Shift Functions	384
11.6. Connecting Von Neumann's Parametrization of All Self-Adjoint Extensions of T_{min} and the Boundary Data Map $\Lambda_{A',B'}^{A,B}(\cdot)$	392
11.7. Notes	399
Chapter 12. Spectral Zeta Functions and Computing Traces and Determinants for Sturm–Liouville Operators	401
12.1. Introduction	401
12.2. Traces, (Modified) Fredholm Determinants, and Zeta Functions of Operators	404
12.3. Regular Sturm–Liouville Operators	412
12.4. Schrödinger Operators on a Half-Line I: The Short-Range (Scattering) Case	429
12.5. Schrödinger Operators on a Half-Line II: The Case $q(x) \rightarrow +\infty$ as $x \rightarrow \infty$ and the Airy Potential	435
12.6. Notes	444
Chapter 13. The Singular Problem on $(a, b) \subseteq \mathbb{R}$ Revisited	449
13.1. Introduction	449
13.2. Strongly Singular Coefficients and the Limit Point Case	451
13.3. Examples: The (Perturbed) Bessel and Generalized Bessel Operator on $(0, \infty)$ in the Limit Point Case	463
13.4. The Nonoscillatory Case and Generalized Boundary Values	477
13.5. Examples: The Bessel and Generalized Bessel Operators on $(0, b)$, $b \in (0, \infty) \cup \{\infty\}$, and the Jacobi Operator on $(-1, 1)$	484
13.6. Weyl–Titchmarsh Functions Revisited	495
13.7. Examples: The Bessel and Generalized Bessel Operators on $(0, \infty)$ Revisited, the Legendre Operator on $(-1, 1)$, and the Laguerre (or, Kummer) Operator on $(0, \infty)$	499
13.8. 2×2 Matrix-Valued M -Functions, General Boundary Conditions, and Green's Functions	520

13.9.	2×2 Matrix-Valued $M_{\kappa,A,B}(\cdot, x_0)$ -Functions, Their Connection to the Spectral Family $E_{T_{A,B}}(\cdot)$, and the Generalized Fourier or Eigenfunction Transform	536
13.10.	Appendix: Krein-Type Resolvent Formulas in the Singular Context in a Nutshell	542
13.11.	Notes	546
Chapter 14. Four-Coefficient Sturm–Liouville Operators and Distributional Potential Coefficients		
14.1.	Introduction	551
14.2.	The Basics on Four-Coefficient Sturm–Liouville Equations with Possibly Distributional Potential Coefficients	553
14.3.	Four-Coefficient Sturm–Liouville Operators	556
14.4.	Weyl’s Alternative	561
14.5.	Self-Adjoint Realizations	566
14.6.	Boundary Conditions	569
14.7.	The Spectrum and the Resolvent	573
14.8.	The Weyl–Titchmarsh m -Function	577
14.9.	The Generalized Fourier or Eigenfunction Transform	581
14.10.	$M_\alpha(\cdot, x_0)$ and the Spectral Multiplicity	586
14.11.	(Non-)Principal Solutions and Boundedness from Below	592
14.12.	The Friedrichs Extension	605
14.13.	A Criterion for Purely Discrete Spectrum Bounded From Below	621
14.14.	The Krein–von Neumann Extension	630
14.15.	Positivity Preserving and Improving Resolvents and Semigroups in the Regular Case	634
14.16.	Inverse Uniqueness Results in Terms of the Spectral Measure	645
14.17.	Inverse Uniqueness Results in Terms of Two Discrete Spectra	651
14.18.	Inverse Uniqueness Results in Terms of Three Discrete Spectra	655
14.19.	Local Borg–Marchenko Uniqueness Results for Schrödinger Operators	659
14.20.	Appendix: Associated Sesquilinear Forms in the Regular Case	663
14.21.	Appendix: High-Energy Asymptotics in the General Case	672
14.22.	Appendix: High-Energy Asymptotics in the Special Case of Schrödinger Operators (i.e., $p = r = 1$)	673
14.23.	Notes	674
Chapter 15. Epilogue: Applications to Some Partial Differential Equations of Mathematical Physics		
15.1.	Introduction	685
15.2.	The Heat Equation	685
15.3.	The Wave Equation	695
15.4.	The Schrödinger Equation	697
15.5.	Appendix: Spherical Harmonics and the Laplace–Beltrami Operator in $L^2(\mathbb{S}^{n-1}; d^{n-1}\omega)$, $n \in \mathbb{N}$, $n \geq 2$	699
15.6.	Notes	702
Appendix A. Basic Facts on Linear Operators		
A.1.	Introduction	703

A.2. Adjoints, Closures, and Relative Boundedness of Linear Operators	703
A.3. Notes	715
Appendix B. Basics of Spectral Theory	717
B.1. Introduction	717
B.2. Some Preparations	717
B.3. The Spectrum, Resolvent Set, and Field of Regularity	719
B.4. Subdivisions of the Spectrum	723
B.5. The Spectrum and Some of its Subdivisions in the Special Self-Adjoint Case	727
B.6. Notes	739
Appendix C. Classes of Bounded Linear Operators	741
C.1. Introduction	741
C.2. Finite-Rank and Compact Operators	741
C.3. Hilbert–Schmidt and Trace Class Operators	745
C.4. Trace Ideals and (Modified) Fredholm Determinants	752
C.5. Notes	759
Appendix D. Extensions of Symmetric Operators	761
D.1. Introduction	761
D.2. Symmetric and Self-Adjoint Extensions	761
D.3. The Friedrichs and Krein–von Neumann Extensions in the Semibounded Case	773
D.4. The Abstract Krein–von Neumann Extension as an Abstract Buckling Problem	783
D.5. Krein-Type Resolvent Formulas: General Case and Donoghue–Weyl M -Operator	785
D.6. Krein-Type Resolvent Formulas: Finitely Many Deficiency Indices	796
D.7. Boundary Triplets for ODEs in a Nutshell	802
D.8. Notes	817
Appendix E. Elements of Sesquilinear Forms	821
E.1. Introduction	821
E.2. The Second Form Representation Theorem	821
E.3. Sums of Forms and the KLLMN Theorem	830
E.4. Forms and Purely Discrete Spectra	832
E.5. Notes	834
Appendix F. Basics of Nevanlinna–Herglotz Functions	835
F.1. Introduction	835
F.2. On (Essential) Supports of Measures and Essential Closures of Sets	835
F.3. Properties of Nevanlinna–Herglotz Functions	837
F.4. Examples of Nevanlinna–Herglotz Representations	849
F.5. Notes	852
Appendix G. Bessel Functions in a Nutshell	855
G.1. Introduction	855
G.2. Basic Facts	855

G.3. Recursion Relations	857
G.4. Asymptotics	857
G.5. Analytic Continuation and Some Connection Formulas	858
G.6. Differential Equations	858
G.7. Notes	859
Bibliography	861
Author Index	907
List of Symbols	917
Subject Index	921
