

## Contents

Preface	ix
List of Participants	xi
$H^1(X, \nu)$ of conics and Witt kernels in characteristic 2 R. ARAVIRE and B. JACOB	1
Pythagoras numbers and quadratic field extensions K.J. BECHER and D.B. LEEP	21
On perfection relations in lattices A.-M. BERGÉ and J. MARTINET	29
Linear independence of local densities of quadratic forms and its application to the theory of Siegel modular forms S. BÖCHERER, Y. HIRONAKA, and F. SATO	51
Representation of reduced special groups in algebras of continuous functions M. DICKMANN and F. MIRAGLIA	83
Solubility of Fermat equations T.D. BROWNING and R. DIETMANN	99
Multiplicative properties of integral binary quadratic forms A.G. EARNEST and R.W. FITZGERALD	107
Effective structure theorems for symplectic spaces via height L. FUKSHANSKY	117
Orthogonal involutions on algebras of degree 16 and the Killing form of $E_8$ (with an appendix by Kirill Zainoulline) S. GARIBALDI	131
The first Zariski cohomology group of the Witt sheaf over a split simply connected simple algebraic group S. GILLE	163
On families of testing formulae for a pp formula P. GŁADKI and M. MARSHALL	181
Siegel modular forms of small weight and the Witt operator T. IBUKIYAMA and S. WAKATSUKI	189
On isotropy of quadratic pairs N.A. KARPENKO	211

Specialization of forms in the presence of characteristic 2: first steps M. KNEBUSCH	219
Representation of integers by special positive definite integral quadratic forms W. KOHNEN	243
Hyper-isotropy of bilinear forms in characteristic 2 A. LAGHRIBI and P. MAMMONE	249
A historical view of the Pythagoras numbers of fields D.B. LEEP	271
The extensions of $\mathbb{R}$ -places and application M. MACHURA and K. OSIAK	289
Essential dimension A.S. MERKURJEV	299
On the Pfister number of quadratic forms R. PARIMALA, V. SURESH, and J.-P. TIGNOL	327
Martin Kneser's work on quadratic forms and algebraic groups R. SCHARLAU	339
Enumerating perfect forms A. SCHÜRMAN	359
Reduction mod $\ell$ of Theta Series of Level $\ell^n$ N.-P. SKORUPPA	379
On a reciprocity theorem of Gauss L.H. WALLING	391
A bound of the number of reduced Arakelov divisors of a number field T. WATANABE and R. YOSHIMITSU	399
