Contents

Preface: The Maslov Dequantization and Tropical Mathematics vii

Linear Independence over Tropical Semirings and Beyond
M. Akian, S. Gaubert, and A. Guterman 1

The Optimal Assignment Problem for a Countable State Space
M. Akian, S. Gaubert, and V. Kolokoltsov 39

Dequantization of Real Convex Projective Manifolds
D. Alessandrini 61

Tropical Conics for the Layman
M. Ansola and M. J. de la Puente 87

Idempotent Aspects of Hopf-Lax Type Formulas
A. Avantaggiati and P. Loreti 103

On Some Properties of the Image Set of a Max-linear Mapping
P. Butkovič and K. P. Tam 115

Tropical Plücker Functions and Their Bases
V. I. Danilov, A. V. Karzanov, and G. A. Koshevoy 127

A Class of Periodic Minplus Homogeneous Dynamical Systems
N. Farhi 159

Basics of Linear Algebra over the Extended Tropical Semiring
Z. Izhakian 173

Tropical Convex Hull Computations
M. Joswig 193

Complex Roots of Systems of Tropical Equations and Stability of Electrical Power Networks
B. Kh. Kirshtein 213

Dequantization, Statistical Mechanics and Econophysics
V. Maslov 239

Graph Selectors and the Max-Plus Finite Element Method
D. McCaffrey 281

Complexity Reduction, Cornices and Pruning
W. M. McEneaney 293

Tropical Analysis of Plurisubharmonic Singularities
A. Rashkovskii 305

Multiorder, Kleene Stars and Cyclic Projectors in the Geometry of Max Cones
S. Sergeev 317

A Tropical Version of the Schauder Fixed Point Theorem
G. B. Shpiz and G. L. Litvinov 343

Tropical Cones Defined by Max-linear Inequalities
E. Wagneur, L. Truffet, F. Faye, and M. Thiam 351

Minimum Representing Measures in Idempotent Analysis
C. Walsh 367
