

Contents

Preface	vii
List of participants	ix
One-particle irreducibility with initial correlations CHRISTIAN BROUDER and FRÉDÉRIC PATRAS	1
Multiple zeta values and periods: From moduli spaces to Feynman integrals FRANCIS BROWN	27
From quantum electrodynamics to posets of planar binary trees FRÉDÉRIC CHAPOTON and ALESSANDRA FRABETTI	53
Sweedler's duals and Schützenberger's calculus GÉRARD H. E. DUCHAMP and CHRISTOPHE TOLLU	67
Primitive elements of the Hopf algebra of free quasi-symmetric functions L. FOISSY	79
A Renormalisation Group approach to Stochastic Loewner Evolutions ROLAND FRIEDRICH	89
On the causal gauge principle JOSÉ M. GRACIA-BONDÍA	115
Abstract integration, combinatorics of trees and differential equations MASSIMILIANO GUBINELLI	135
Rooted trees appearing in products and co-products RALF HOLTkamp	153
Magnus expansions and beyond ARIEH ISERLES	171
Wilsonian renormalization, differential equations and Hopf algebras T. KRAJEWSKI and P. MARTINETTI	187
Algebraic analysis of non-renormalization theorems in supersymmetric field theories E. KRAUS	237
Not so non-renormalizable gravity DIRK KREIMER	247
Renormalised multiple zeta values which respect quasi-shuffle relations DOMINIQUE MANCHON	255

Formulas for the Connes–Moscovici Hopf algebra FRÉDÉRIC MENOUS	269
Hopf algebras and the combinatorics of connected graphs in quantum field theory ÂNGELA MESTRE and ROBERT OECKL	287
Hopf Algebras of Formal Diffeomorphisms and Numerical Integration on Manifolds ALEXANDER LUNDERVOLD and HANS MUNTHE-KAAS	295
A combinatorial and field theoretic path to quantum gravity: The new challenges of group field theory D. ORITI	325
Noncommutative formal Taylor expansions and second quantised regularised traces SYLVIE PAYCHA	349
Motives: An introductory survey for physicists ABHIJNAN REJ (WITH AN APPENDIX BY MATILDE MARCOLLI)	377
Combinatorics and Feynman graphs for gauge theories WALTER D. VAN SUIJLEKOM	417
Multi-scale Analysis and Non-commutative Field Theory FABIEN VIGNES-TOURNERET	443
