

## Contents

Preface	vii
A duality for the double fibration transform MICHAEL G. EASTWOOD and JOSEPH A. WOLF	1
T-duality of current algebras and their quantization PEDRAM HEKMATI and VARGHESE MATHAI	17
Deformation quantization of instantons on $\mathbb{R}^4$ YOSHIAKI MAEDA and AKIFUMI SAKO	39
The Chern character of certain infinite rank bundles arising in gauge theory JOUKO MICKELSSON	65
K-theories for classes of infinite rank bundles ANDRÉS LARRAÍN-HUBACH	79
A construction of string 2-group models using a transgression-regression technique KONRAD WALDORF	99
Extended symmetries and Poisson algebras associated to twisted Dirac structures ALEXANDER CARDONA	117
C*-algebra approach to the index theory of boundary value problems SEVERINO T. MELO, THOMAS SCHICK, and ELMAR SCHROHE	129
Towards a nano geometry? Geometry and dynamics on nano scale BERNHelm BOOß-BAVNBek	147
Optimal Riemannian metric for a volumorphism and a mean ergodic theorem in complete global Alexandrov nonpositively curved spaces TONY LIIMATAINEN	163
Renormalized integrals and a path integral formula for the heat kernel on a manifold CHRISTIAN BÄR	179
Affine transformations on symbols SYLVIE PAYCHA	199
Determinants of Laplacians on non-compact surfaces CLARA L. ALDANA	223

Calculation of the variation of $\det_{\zeta}D$ SIMON SCOTT	237
Ill-posedness examples for the quasi-geostrophic and the Euler equations GERARD MISIOŁEK and TSUYOSHI YONEDA	251
