

Contents

Preface	vii
A note on twistor integrals SPENCER BLOCH	1
Multiple polylogarithms and linearly reducible Feynman graphs CHRISTIAN BOGNER and MARTIN LÜDERS	11
Comparison of motivic and simplicial operations in mod- l -motivic and étale cohomology PATRICK BROSINAN and ROY JOSHUA	29
On the Broadhurst–Kreimer generating series for multiple zeta values SARAH CARR, HERBERT GANGL, and LEILA SCHNEPS	57
Dyson–Schwinger equations in the theory of computation COLLEEN DELANEY and MATILDE MARCOLLI	79
Scattering amplitudes, Feynman integrals and multiple polylogarithms CLAUDE DUHR	109
Equations D3 and spectral elliptic curves VASILY GOLYSHEV and MASHA VLASENKO	135
Quantum fields, periods and algebraic geometry DIRK KREIMER	153
Renormalization, Hopf algebras and Mellin transforms ERIK PANZER	169
Multiple zeta value cycles in low weight ISMAËL SOUDÈRES	203
Periods and Hodge structures in perturbative quantum field theory STEFAN WEINZIERL	249
Some combinatorial interpretations in perturbative quantum field theory KAREN YEATS	261
