

Contents

Preface	
YONGBIN RUAN and NATHAN PRIDDIS	vii
Quasimaps and some examples of stacks for everybody	
RACHEL WEBB	1
Introduction to the gauged linear sigma model	
EMILY CLADER	19
Localization and mirror symmetry	
DUSTIN ROSS	43
A brief introduction to cosection localization and P -fields	
WEI-PING LI	67
Virtual classes for hypersurfaces via two-periodic complexes	
MARK SHOEMAKER	89
Localized Chern characters for 2-periodic complexes and virtual cycles	
JEONGSEOK OH	117
Singularity theory and mirror symmetry	
TODOR MILANOV	131
Counting points with Berglund–Hübsch–Krawitz mirror symmetry	
URSULA WHITCHER	155
Variations on the theme of quantum Lefschetz	
HONGLU FAN and YUAN-PIN LEE	171
Type II extremal transitions in Gromov–Witten theory	
RONGXIAO MI	183
A Lecture on Holomorphic Anomaly Equations and Extended Holomorphic Anomaly Equations	
CHIU-CHU MELISSA LIU	191
