

# CONTENTS

<b>Preamble</b> .....	xiii
<b>Introduction</b> .....	xv
<b>List of Symbols</b> .....	xxi
<b>1. Probability preserving dynamical systems, recurrence, ergodicity, mixing</b> .....	1
1.1. Dynamical system, invariant measure .....	1
1.1.1. Definition of probability preserving dynamical systems .....	1
1.1.2. First examples .....	2
1.2. Recurrence .....	5
1.3. Ergodicity .....	7
1.3.1. Definition of ergodicity by visits to sets of positive measure .....	7
1.3.2. Link between ergodicity and density of orbits .....	7
1.3.3. Characterization of ergodicity by (sub)-invariant sets and invariant functions .....	8
1.3.4. Characterization of ergodicity by almost surely (sub)-invariant sets and almost surely invariant functions .....	10
1.3.5. ★ Ergodicity and Birkhoff sums .....	14
1.4. Mixing .....	15
1.4.1. Definition and properties .....	16
1.4.2. Examples of mixing and non mixing dynamical systems .....	18
1.5. Exercises .....	21
1.6. Solutions of the exercises .....	23
<b>2. Factors, extensions, isomorphisms</b> .....	33
2.1. Definitions and first examples .....	33
2.2. Properties preserved by factorization .....	35
2.3. Natural extension .....	36
2.4. Exercises .....	42
2.5. Solutions of the exercises .....	43
<b>3. Stationary processes, Markov chains, Transfer operator</b> .....	49
3.1. Stationary processes and dynamical systems .....	49
3.2. Markov chains, stationary measures .....	50

3.2.1. Markov operator and Markov properties .....	51
3.2.2. Stationary measures of Markov chains .....	53
3.3. Transfer operator of a dynamical system .....	55
3.3.1. Definitions and first properties .....	55
3.3.2. Invariant measures and transfer operator .....	60
3.4. Exercises on dynamical systems isomorphic to Markov chains .....	70
3.5. Solutions of the exercises .....	73
<b>4. Ergodic theorems, asymptotic variance .....</b>	<b>83</b>
4.1. The von Neumann ergodic Theorem .....	84
4.2. The Birkhoff ergodic theorem .....	87
4.3. Asymptotic variance .....	91
4.4. Exercises .....	94
4.5. Solutions of the exercises .....	97
<b>5. Martingale approximation method .....</b>	<b>105</b>
5.1. Reversed martingales .....	106
5.2. Central Limit Theorem for reversed martingales and applications .....	109
5.3. Martingale-coboundary decomposition .....	114
5.4. Non-degeneracy of the Gaussian limit .....	122
5.5. Other limit theorems .....	123
5.6. Exercises .....	125
5.7. Solutions of the exercises .....	126
<b>6. Quasi-compactness of transfer operators .....</b>	<b>131</b>
6.1. Review of spectral theory .....	133
6.2. A variant of the Ionescu Tulcea and Marinescu theorem .....	136
6.2.1. Application .....	138
6.2.2. Proof of Theorem 6.7 .....	139
6.3. ★ Further spectral theory: Essential spectrum and quasi-compact operators .....	145
6.3.1. ★ Essential spectrum and decomposition of quasi-compact operators .....	145
6.3.2. ★ Other characterizations of the essential spectral radius .....	151
6.3.3. ★ Quasi-compactness and Doeblin Fortet type Condition .....	155
6.4. Application to the study of dynamical systems .....	157
6.5. Exercise .....	160
6.6. Solution of the exercise .....	162
<b>7. The Nagaev-Guivarc'h operator perturbation method .....</b>	<b>169</b>
7.1. A perturbation theorem based on the implicit function theorem .....	171
7.2. Application to the Central Limit Theorem .....	175
7.3. Exercises .....	180
7.4. ★ The Keller and Liverani perturbation theorem .....	181
7.4.1. ★ Continuity of the resolvent .....	183

7.4.2. ★ Continuity of the dimension of the generalized eigenspaces . . . . .	188
7.4.3. ★ Proof of Theorem 7.8 . . . . .	190
7.5. ★ Exercises . . . . .	191
7.6. Solutions of the exercises . . . . .	194
<b>8. ★ Central Limit Theorem via decorrelation . . . . .</b>	<b>209</b>
8.1. ★ Central Limit Theorem under a general decorrelation assumption . . .	211
8.2. ★ A general strategy to prove the decorrelation assumptions using conditioning . . . . .	219
8.3. ★ Central Limit Theorem in a general (partially) hyperbolic context . . .	221
8.4. ★ Application to ergodic toral automorphisms . . . . .	224
8.4.1. ★ Exponential rate of decorrelation for Hölder observables . . . . .	228
8.4.2. ★ Proof of the exponential convergence of conditional expectations	232
8.5. ★ Solutions of the exercises . . . . .	237
<b>Bibliography . . . . .</b>	<b>243</b>
<b>Index . . . . .</b>	<b>251</b>
