Foreword by Kenneth Brown and Stephen Chase	xiii
Foreword by André Joyal	xv
Introduction	xxi
Acknowledgements	li
<b>Part I. Monoidal Categories</b>	<b>1</b>
Chapter 1. Monoidal Categories	3
1.1. Braided monoidal categories	3
1.2. Hopf monoids	7
1.3. The internal Hom functor	16
1.4. Coherence	17
Chapter 2. Graded Vector Spaces	21
2.1. Graded vector spaces	21
2.2. The Schubert statistic	26
2.3. $q$ -Hopf algebras	34
2.4. Multigraded vector spaces and $Q$ -Hopf algebras	39
2.5. The norm map	42
2.6. The tensor algebra and its relatives	45
2.7. Chain complexes	51
2.8. Graded vector spaces with creation-annihilation operators	55
2.9. $N$ -complexes	56
Chapter 3. Monoidal Functors	61
3.1. Bilax monoidal functors	61
3.2. Examples of bilax monoidal functors	67
3.3. Composites of bilax monoidal functors	72
3.4. A comparison of bimonoids and bilax monoidal functors	75
3.5. Normal bilax monoidal functors	80
3.6. Bistrong monoidal functors	84
3.7. Hopf lax monoidal functors	88
3.8. An alternative description of bilax monoidal functors	97

3.9.	Adjunctions of monoidal functors	100
3.10.	The contragredient construction	107
3.11.	The image of a morphism of bilax monoidal functors	111
Chapter 4.	Operad Lax Monoidal Functors	119
4.1.	Other types of monoids and monoidal functors	119
4.2.	Types of monoid: the general case	124
4.3.	Types of monoidal functor: the general case	127
4.4.	Composites of monoidal functors and transformation of monoids	131
Chapter 5.	Bilax Monoidal Functors in Homological Algebra	137
5.1.	The simplicial category and simplicial modules	138
5.2.	Topological spaces and simplicial sets	141
5.3.	Alexander–Whitney and Eilenberg–Zilber	142
5.4.	The chain complex functors	145
5.5.	The (co)homology functors. Cup and Pontrjagin products	150
5.6.	A $q$ -analogue of the chain complex functor	154
Chapter 6.	2-Monoidal Categories	161
6.1.	The basic theory of 2-monoidal categories	162
6.2.	Coherence	167
6.3.	Braided monoidal categories as 2-monoidal categories	170
6.4.	Examples of 2-monoidal categories	172
6.5.	Bimonoids and double (co)monoids	178
6.6.	Modules and comodules over a bimonoid	184
6.7.	Examples of bimonoids and double monoids	185
6.8.	Bilax and double (co)lax monoidal functors	189
6.9.	Examples of bilax and double (co)lax monoidal functors	195
6.10.	The free monoid functor as a bilax monoidal functor	198
6.11.	2-monoidal categories viewed as pseudomonoids	199
6.12.	Contragredience for 2-monoidal categories	203
Chapter 7.	Higher Monoidal Categories	207
7.1.	3-monoidal categories	207
7.2.	Symmetric monoidal categories as 3-monoidal categories	212
7.3.	Constructions of 3-monoidal categories	213
7.4.	Monoids in 3-monoidal categories	216
7.5.	Monoidal functors between 3-monoidal categories	217
7.6.	Higher monoidal categories	220
7.7.	Monoids in higher monoidal categories	222
7.8.	Monoidal functors between higher monoidal categories	224
7.9.	Higher monoidal categories viewed as pseudomonoids	228
7.10.	Contragredience for higher monoidal categories	230
<b>Part II.</b>	<b>Hopf Monoids in Species</b>	<b>233</b>
Chapter 8.	Monoidal Structures on Species	235
8.1.	Species	235
8.2.	Monoids and comonoids in species	239
8.3.	Bimonoids and Hopf monoids in species	243

8.4.	Antipode formulas for connected bimonoids	247
8.5.	The simplest Hopf monoids	249
8.6.	Duality in species	252
8.7.	Set species and linearized species	254
8.8.	Bimonoids as bilax monoidal functors	262
8.9.	Connected and positive species	265
8.10.	Primitive elements and the coradical filtration	269
8.11.	Derivatives and internal Hom	270
8.12.	Species with up-down operators	272
8.13.	The Hadamard product and an interchange law on species	275
Chapter 9.	Deformations of Hopf Monoids	283
9.1.	$q$ -Hopf monoids	283
9.2.	Connected 0-bimonoids	284
9.3.	The signed exponential species	287
9.4.	The Hadamard and signature functors	288
9.5.	The $q$ -Hopf monoids of linear orders	290
9.6.	Cohomology of linearized comonoids in species	294
9.7.	The Schubert and descent cocycles	301
Chapter 10.	The Coxeter Complex of Type $A$	305
10.1.	Partitions and compositions	306
10.2.	Faces, chambers, flats and cones	311
10.3.	The Coxeter complex of type $A$	314
10.4.	Tits projection maps and the monoid of faces	316
10.5.	The gallery metric and the gate property	320
10.6.	Shuffle permutations	323
10.7.	The descent and global descent maps	324
10.8.	The action of faces on chambers and the descent algebra	328
10.9.	Directed faces and directed flats	330
10.10.	The dimonoid of directed faces	335
10.11.	The break and join maps	337
10.12.	The weighted distance function	341
10.13.	The Schubert cocycle and the gallery metric	346
10.14.	A bilinear form on chambers. Varchenko's result	353
10.15.	Bilinear forms on directed faces and faces	357
Chapter 11.	Universal Constructions of Hopf Monoids	363
11.1.	The underlying species for the universal objects	364
11.2.	The free monoid and the free Hopf monoid	365
11.3.	The free commutative Hopf monoid	370
11.4.	The cofree comonoid and the cofree Hopf monoid	372
11.5.	The cofree cocommutative Hopf monoid	377
11.6.	The norm transformation and the abelianization	379
11.7.	The deformed free and cofree Hopf monoids	382
11.8.	Antipode formulas	388
11.9.	Primitive elements and related functors	393
11.10.	The free and cofree 0-Hopf monoids	397
Chapter 12.	Hopf Monoids from Geometry	401

12.1.	Bases	402
12.2.	The $q$ -Hopf monoid of chambers	403
12.3.	The $q$ -Hopf monoid of pairs of chambers	406
12.4.	The $q$ -Hopf monoids of faces	414
12.5.	The $q$ -Hopf monoids of directed faces	419
12.6.	The Hopf monoids of flats	426
12.7.	The Hopf monoids of directed flats	429
12.8.	Relating the Hopf monoids	433
Chapter 13.	Hopf Monoids from Combinatorics	443
13.1.	Posets	443
13.2.	Simple graphs	450
13.3.	Rooted trees and forests	452
13.4.	Relations	460
13.5.	Combinatorics and geometry	463
13.6.	Set-graded posets	465
13.7.	Set-balanced simplicial complexes	473
13.8.	Closures, matroids, convex geometries, and topologies	477
13.9.	The Birkhoff transform	481
Chapter 14.	Hopf Monoids in Colored Species	487
14.1.	Colored species	487
14.2.	$Q$ -Hopf monoids	490
14.3.	The colored exponential species	494
14.4.	The colored Hadamard and signature functors	496
14.5.	The colored linear order species	499
14.6.	The colored free and cofree Hopf monoids	502
14.7.	Colored Hopf monoids from geometry	509
<b>Part III.</b>	<b>Fock Functors</b>	<b>517</b>
Chapter 15.	From Species to Graded Vector Spaces	519
15.1.	The Fock bilax monoidal functors	519
15.2.	From Hopf monoids to Hopf algebras: Stover's constructions	526
15.3.	Values of Fock functors on particular Hopf monoids	528
15.4.	The norm transformation between full Fock functors	532
15.5.	The Fock functors and commutativity	536
15.6.	The Fock functors and primitive elements	540
15.7.	The full Fock functors and dendriform algebras	543
Chapter 16.	Deformations of Fock Functors	547
16.1.	Deformations of the full Fock functors	548
16.2.	The deformed norm transformation	552
16.3.	The fermionic and anyonic Fock bilax monoidal functors	555
16.4.	The deformed full Fock functor and commutativity	558
16.5.	Deformations of Hopf algebras arising from species	561
Chapter 17.	From Hopf Monoids to Hopf Algebras: Examples	565
17.1.	Shifting and standardization	566
17.2.	The Hopf algebra of permutations	568

17.3.	Quasi-symmetric and noncommutative symmetric functions	571
17.4.	Symmetric functions	575
17.5.	Combinatorial Hopf algebras	577
Chapter 18.	Adjoint of the Fock Functors	581
18.1.	The right adjoint of $\overline{\mathcal{K}}$	582
18.2.	The right adjoint of $\mathcal{K}$	586
18.3.	The left adjoint of $\mathcal{K}$	587
18.4.	Nonexistence of certain adjoints	590
18.5.	The right adjoints of $\mathcal{K}$ and $\overline{\mathcal{K}}$ on comonoids	591
Chapter 19.	Decorated Fock Functors and Creation-Annihilation	599
19.1.	Decorated Fock functors	600
19.2.	The decorated norm transformation	605
19.3.	Classical creation-annihilation operators	607
19.4.	The generalized Fock spaces of Guță and Maassen	610
19.5.	Creation-annihilation on generalized bosonic Fock spaces	616
19.6.	Species with balanced operators	620
19.7.	Deformations of decorated Fock functors	625
19.8.	Deformations related to up-down and creation-annihilation	627
19.9.	Yang–Baxter deformations of decorated Fock functors	631
Chapter 20.	Colored Fock Functors	635
20.1.	The colored Fock functors	636
20.2.	The colored norm transformation and the anyonic Fock functor	642
20.3.	The colored full Fock functor and commutativity	646
20.4.	Colors and decorations	651
20.5.	Quantum objects	652
<b>Appendices</b>		<b>655</b>
Appendix A.	Categorical Preliminaries	657
A.1.	Products, coproducts and biproducts	657
A.2.	Adjunction and equivalence	659
A.3.	Colimits of functors	661
A.4.	Kan extensions	665
A.5.	Comma categories	667
Appendix B.	Operads	669
B.1.	Positive operads	669
B.2.	Positive cooperads	675
B.3.	Hereditary species. Schmitt’s construction of positive cooperads	678
B.4.	General operads and cooperads	680
B.5.	Modules over operads and monoids in species	689
B.6.	Hopf operads	691
B.7.	Nonsymmetric operads	695
Appendix C.	Pseudomonoids and the Looping Principle	697
C.1.	2-categories and bicategories	697
C.2.	Pseudomonoids	701

C.3.	Enrichment	706
C.4.	The looping principle	708
C.5.	Bipartite graphs, spans, and bimodules	710
Appendix D.	Monoids and the Simplicial Category	713
D.1.	Mac Lane's simplicial category	713
D.2.	Monoids, lax monoids, and homotopy monoids	715
D.3.	Lax monoidal categories	717
D.4.	The convolution homotopy monoid	720
