

# Contents

Chapter 1. Overview	1
1.1. Introduction	1
1.2. A brief introduction to Siegel–Weil theory	7
1.3. Known results	11
1.4. An overview on the proof	13
1.5. The philosophy of Shimura varieties	16
Chapter 2. Integral Models of Toroidal Compactifications of Mixed Shimura Varieties	21
2.1. Group schemes of type (P)	21
2.2. Mixed Shimura data	25
2.3. Symplectic, Hodge, and Abelian type Shimura data	32
2.4. Orthogonal Shimura data	37
2.5. Main theorems on integral models	43
2.6. The arithmetic theory of automorphic forms	50
2.7. Mixed Shimura varieties of symplectic type	58
2.8. The $\mathfrak{q}$ -expansion principle	68
Chapter 3. Volumes of Orthogonal Shimura Varieties	75
3.1. Special cycles	75
3.2. The arithmetic of Borcherds products	78
3.3. The arithmetic of Borcherds input forms	91
3.4. An arithmetic Siegel–Weil formula	104
3.5. Main results	116
Appendix A	127
A.1. Lemmas on quadratic forms	127
A.2. Lacunarity of modular forms	130
A.3. Semilinear representations	131
Appendix B	135
B.1. Explicit calculation of $\lambda(L_{\mathbb{Z}}; \mathfrak{s})$	135
Bibliography	141
Index	145
Table of Notation	149
