Preface	vii
List of Participants	ix
List of Speakers	xiii
Singularity-Free Methods for the Time-Dependent Schrödinger Equation for Nonlinear Molecules in Intense Laser Fields — A Non-Perturbative Approach <i>André D. Bandrauk and HuiZhong Lu</i>	1
Feasibility and Competitiveness of a Reduced Basis Approach for Rapid Electronic Structure Calculations in Quantum Chemistry <i>Éric Cancès, Claude Le Bris, Yvon Maday, Ngoc Cuong Nguyen, Anthony T. Patera, and George Shu Heng Pau</i>	15
Some Fundamental Mathematical Properties in Atomic and Molecular Quantum Mechanics <i>Goong Chen, Zhonghai Ding, Alain Perronnet, Marlan O. Scully, Ruihua Xie, and Zhigang Zhang</i>	49
Sparse Tensor-Product Fokker–Planck-Based Methods for Nonlinear Bead-Spring Chain Models of Dilute Polymer Solutions <i>Pascal Delaunay, Alexei Lozinski, and Robert G. Owens</i>	73
A Partial Differential Equation for Credit Derivatives Pricing <i>Marcos Escobar and Luis Seco</i>	91
A Short Review on Computational Issues Arising in Relativistic Atomic and Molecular Physics <i>Maria J. Esteban</i>	105
Model Hamiltonians in Density Functional Theory <i>Paola Gori-Giorgi, Julien Toulouse, and Andreas Savin</i>	117
Simulation of Quantum-Classical Dynamics by Surface-Hopping Trajectories <i>Hyojoon Kim and Raymond Kapral</i>	131
Simulating Realistic and Nonadiabatic Chemical Dynamics: Application to Photochemistry and Electron Transfer Reactions <i>Denise M. Koch, Qadir K. Timerghazin, and Gilles H. Peslherbe</i>	145
A Maxwell–Schrödinger Model for Non-perturbative Laser-molecule Interaction and Some Methods of Numerical Computation <i>Emmanuel Lorin, Szczepan Chelkowski, and André Bandrauk</i>	161

Parareal in Time Algorithm for Kinetic Systems Based on Model Reduction <i>Yvon Maday</i>	183
