
Contents

Prefaces	ix
Part 1. Counting	
Chapter 1. Fundamentals	7
§1.1. Elementary Counting Principles	7
§1.2. The Fundamental Counting Coefficients	10
§1.3. Permutations	14
§1.4. Recurrence Equations	17
§1.5. Discrete Probability	23
§1.6. Existence Theorems	29
Exercises for Chapter 1	33
Chapter 2. Summation	41
§2.1. Direct Methods	41
§2.2. The Calculus of Finite Differences	46
§2.3. Inversion	52
§2.4. Inclusion–Exclusion	55
Exercises for Chapter 2	60
Chapter 3. Generating Functions	65
§3.1. Definitions and Examples	65
§3.2. Solving Recurrences	67
§3.3. Generating Functions of Exponential Type	74
Exercises for Chapter 3	76

Chapter 4. Counting Patterns	81
§4.1. Symmetries	81
§4.2. Statement of the Problem	84
§4.3. Patterns and the Cycle Indicator	86
§4.4. Pólya's Theorem	88
Exercises for Chapter 4	94
Chapter 5. Asymptotic Analysis	99
§5.1. The Growth of Functions	99
§5.2. Order of Magnitude of Recurrence Relations	103
§5.3. Running Times of Algorithms	106
Exercises for Chapter 5	109
Bibliography for Part 1	113
Part 2. Graphs and Algorithms	
Chapter 6. Graphs	119
§6.1. Definitions and Examples	119
§6.2. Representation of Graphs	124
§6.3. Paths and Circuits	126
§6.4. Directed Graphs	129
Exercises for Chapter 6	132
Chapter 7. Trees	137
§7.1. What Is a Tree?	137
§7.2. Breadth-First and Depth-First Search	141
§7.3. Minimal Spanning Trees	143
§7.4. The Shortest Path in a Graph	146
Exercises for Chapter 7	148
Chapter 8. Matchings and Networks	153
§8.1. Matchings in Bipartite Graphs	153
§8.2. Construction of Optimal Matchings	157
§8.3. Flows in Networks	164
§8.4. Eulerian Graphs and the Traveling Salesman Problem	170
§8.5. The Complexity Classes P and NP	178
Exercises for Chapter 8	181

Chapter 9. Searching and Sorting	187
§9.1. Search Problems and Decision Trees	187
§9.2. The Fundamental Theorem of Search Theory	191
§9.3. Sorting Lists	197
§9.4. Binary Search Trees	203
Exercises for Chapter 9	208
Chapter 10. General Optimization Methods	215
§10.1. Backtracking	215
§10.2. Dynamic Programming	219
§10.3. The Greedy Algorithm	226
Exercises for Chapter 10	229
Bibliography for Part 2	233
Part 3. Algebraic Systems	
Chapter 11. Boolean Algebras	239
§11.1. Definition and Properties	239
§11.2. Propositional Logic and Boolean Functions	241
§11.3. Logical Nets	246
§11.4. Boolean Lattices, Orders, and Hypergraphs	249
Exercises for Chapter 11	255
Chapter 12. Modular Arithmetic	259
§12.1. Calculating with Congruences	259
§12.2. Finite Fields	262
§12.3. Latin Squares	265
§12.4. Combinatorial Designs	268
Exercises for Chapter 12	276
Chapter 13. Coding	281
§13.1. Statement of the Problem	281
§13.2. Source Encoding	282
§13.3. Error Detection and Correction	284
§13.4. Linear Codes	289
§13.5. Cyclic Codes	294
Exercises for Chapter 13	297

Chapter 14. Cryptography	303
§14.1. Cryptosystems	303
§14.2. Linear Shift Registers	306
§14.3. Public-Key Cryptosystems	312
§14.4. Zero-Knowledge Protocols	316
Exercises for Chapter 14	319
Chapter 15. Linear Optimization	323
§15.1. Examples and Definitions	323
§15.2. Duality	325
§15.3. The Fundamental Theorem of Linear Optimization	331
§15.4. Admissible Solutions and Optimal Solutions	336
§15.5. The Simplex Algorithm	340
§15.6. Integer Linear Optimization	347
Exercises for Chapter 15	349
Bibliography for Part 3	353
Solutions to Selected Exercises	355
Index	383
