

CONTENTS

Preface	vii
Prologue: Notation, Terminology, and Set Theory	1
Numbers	1
Sets and mappings	2
Zorn's lemma	3
1 Topology	5
1.1 Metric spaces	5
1.2 Topological spaces and continuous maps	9
1.3 Neighborhood bases and convergence	13
1.4 Compactness	15
2 Measure and Integration: General Theory	21
2.1 Measures	21
2.2 Integration	26
2.3 Convergence of functions and convergence of integrals	31
2.4 Product measures and the Fubini-Tonelli theorem	34
2.5 Relations between (signed and complex) measures	36
3 Measure and Integration: Constructions and Special Examples	41
3.1 Construction of measures	41
3.2 Lebesgue measure	44
3.3 Regular Borel measures and functions on the real line	52
3.4 Hausdorff measure	56
3.5 Regular Borel measures on LCH spaces	59
4 Rudiments of Functional Analysis	63
4.1 Normed vector spaces and bounded linear maps	63
4.2 Hilbert spaces	68
4.3 Other topological vector spaces	71

5	Function Spaces	75
5.1	L^p spaces	75
5.2	Spaces of continuous functions	80
6	Topics in Analysis on Euclidean Space	85
6.1	Convolutions	86
6.2	Fourier series and transforms	89
6.3	Distributions	94
	Bibliography	101
	Index	103
	About the Author	107
