

CONTENTS

Preface	vii
1 Fundamentals	1
1.1 What is Topology?	1
1.2 First Definitions	1
1.3 Mappings	8
1.4 The Separation Axioms	11
1.5 Compactness	17
1.6 Homeomorphisms	21
1.7 Connectedness	24
1.8 Path-Connectedness	27
1.9 Continua	28
1.10 Totally Disconnected Spaces	30
1.11 The Cantor Set	33
1.12 Metric Spaces	36
1.13 Metrizable Spaces	40
1.14 Baire's Theorem	41
1.15 Lebesgue's Lemma and Lebesgue Numbers	45
2 Advanced Properties of Topological Spaces	47
2.1 Basis and Subbasis	47
2.2 Product Spaces	48
2.3 Relative Topology	51
2.4 First Countable and Second Countable	51
2.5 Compactifications	54
2.6 Quotient Topologies	56
2.7 Uniformities	58
2.8 Morse Theory	60
2.9 Proper Mappings	65
2.10 Paracompactness	66

3 Moore-Smith Convergence and Nets	69
3.1 Introductory Remarks	69
3.2 Nets	69
4 Function Spaces	73
4.1 Preliminary Ideas	73
4.2 The Topology of Pointwise Convergence	74
4.3 The Compact-Open Topology	75
4.4 Uniform Convergence	76
4.5 Equicontinuity and the Ascoli-Arzela Theorem	78
4.6 The Weierstrass Approximation Theorem	81
Table of Notation	87
Glossary	91
Bibliography	99
Index	103
About the Author	107
