Preface	ix
1 Historical Introduction	1
1.1 Greek foreshadowing	1
1.2 Newton and Leibniz	4
1.3 Cauchy, Riemann, and Darboux	7
1.4 Lebesgue	12
1.5 Henstock and Kurzweil	13
1.6 Extensions	14
1.7 Exercises	17
1.8 References	23
2 The Riemann Integral	25
2.1 Riemann integrability	27
2.2 Subintervals	37
2.3 The fundamental theorems	39
2.4 Convergence theorems	41
2.5 Exercises	44
2.6 References	50
3 The Darboux integral	51
3.1 Darboux integrability	53
3.2 Comparing Riemann and Darboux integration	58
3.3 Additional integrability results	61
3.4 Exercises	65
3.5 References	70
4 A Functional zoo	71
4.1 Dirichlet and friends	71
4.2 Trigonometric series	72
4.3 Friends of Cantor	77
4.4 Volterra's example	81

4.5	Exercises	83
4.6	References	89
5	Another Approach: Measure Theory	91
5.1	Measurable sets I	93
5.2	Outer measure	95
5.3	Measurable sets II	97
5.4	Sigma algebras	100
5.5	Measurable sets III	103
5.6	Measurable functions	105
5.7	Exercises	109
5.8	References	117
6	The Lebesgue Integral	119
6.1	Variations	119
6.2	Reconciling the approaches	124
6.3	Convergence theorems	134
6.4	The fundamental theorems	141
6.5	Exercises	149
6.6	References	159
7	The Gauge Integral	161
7.1	Definition and basic examples	162
7.2	The art of constructing gauges	167
7.3	Basic integrability results	172
7.4	Absolute integrability	177
7.5	Convergence theorems	186
7.6	The fundamental theorems	190
7.7	Integral relationships	199
7.8	Loose ends and Dini derivatives	201
7.9	Some reflections on the gauge integral	208
7.10	Exercises	209
7.11	References	226
8	Stieltjes-type Integrals and Extensions	227
8.1	Examples and counterexamples	228
8.2	Basic integrability theorems	230
8.3	Evaluation theorems	232
8.4	Convergence theorems	237
8.5	Connecting to measure theory	241
8.6	Integration with measures	247

8.7	Extensions to other types of measures	251
8.8	Exercises	256
8.9	References	269
9	A Look Back	271
9.1	Basic approaches	271
9.2	Integrable functions	273
9.3	Convergence theorems	274
9.4	The fundamental theorems	276
9.5	Conclusion	277
10	Afterword: L_2 Spaces and Fourier Series	279
10.1	L_2 spaces	281
10.2	Completeness	288
10.3	Density	291
10.4	Conclusion	299
10.5	Exercises	300
10.6	References	308
	Appendices: A Compendium of Definitions and Results	309
A.1	Sets of real numbers	309
A.2	Infimums and supremums	311
A.3	Sequences of real numbers	312
A.4	Real-valued functions	314
A.5	Sequences of functions	315
A.6	Complex numbers	316
A.7	Inner product spaces and projections	317
	Index	319
	About the Author	325
