Preface	ix
Twenty Key Icons of Mathematics	xi
1 The Bride’s Chair	1
1.1 The Pythagorean theorem—Euclid’s proof and more	2
1.2 The Vecten configuration	4
1.3 The law of cosines	7
1.4 Grebe’s theorem and van Lamoen’s extension	8
1.5 Pythagoras and Vecten in recreational mathematics	9
1.6 Challenges	11
2 Zhou Bi Suan Jing	15
2.1 The Pythagorean theorem—a proof from ancient China . . .	16
2.2 Two classical inequalities	17
2.3 Two trigonometric formulas	18
2.4 Challenges	19
3 Garfield’s Trapezoid	21
3.1 The Pythagorean theorem—the Presidential proof	22
3.2 Inequalities and Garfield’s trapezoid	22
3.3 Trigonometric formulas and identities	23
3.4 Challenges	26
4 The Semicircle	29
4.1 Thales’ triangle theorem	30
4.2 The right triangle altitude theorem and the geometric mean .	31
4.3 Queen Dido’s semicircle	32
4.4 The semicircles of Archimedes	34
4.5 Pappus and the harmonic mean	37
4.6 More trigonometric identities	38
4.7 Areas and perimeters of regular polygons	39

4.8	Euclid's construction of the five Platonic solids	40
4.9	Challenges	41
5	Similar Figures	45
5.1	Thales' proportionality theorem	46
5.2	Menelaus's theorem	52
5.3	Reptiles	53
5.4	Homothetic functions	56
5.5	Challenges	58
6	Cevians	61
6.1	The theorems of Ceva and Stewart	62
6.2	Medians and the centroid	65
6.3	Altitudes and the orthocenter	66
6.4	Angle-bisectors and the incenter	68
6.5	Circumcircle and circumcenter	70
6.6	Non-concurrent cevians	72
6.7	Ceva's theorem for circles	73
6.8	Challenges	74
7	The Right Triangle	77
7.1	Right triangles and inequalities	78
7.2	The incircle, circumcircle, and excircles	79
7.3	Right triangle cevians	84
7.4	A characterization of Pythagorean triples	85
7.5	Some trigonometric identities and inequalities	86
7.6	Challenges	87
8	Napoleon's Triangles	91
8.1	Napoleon's theorem	92
8.2	Fermat's triangle problem	93
8.3	Area relationships among Napoleon's triangles	95
8.4	Escher's theorem	98
8.5	Challenges	99
9	Arcs and Angles	103
9.1	Angles and angle measurement	104
9.2	Angles intersecting circles	107
9.3	The power of a point	109
9.4	Euler's triangle theorem	111
9.5	The Taylor circle	112
9.6	The Monge circle of an ellipse	113
9.7	Challenges	114

10 Polygons with Circles	117
10.1 Cyclic quadrilaterals	118
10.2 Sangaku and Carnot's theorem	121
10.3 Tangential and bicentric quadrilaterals	125
10.4 Fuss's theorem	126
10.5 The butterfly theorem	127
10.6 Challenges	128
11 Two Circles	131
11.1 The eyeball theorem	132
11.2 Generating the conics with circles	133
11.3 Common chords	135
11.4 Vesica piscis	137
11.5 The vesica piscis and the golden ratio	138
11.6 Lunes	139
11.7 The crescent puzzle	141
11.8 Mrs. Miniver's problem	141
11.9 Concentric circles	143
11.10 Challenges	144
12 Venn Diagrams	149
12.1 Three-circle theorems	150
12.2 Triangles and intersecting circles	153
12.3 Reuleaux polygons	155
12.4 Challenges	158
13 Overlapping Figures	163
13.1 The carpets theorem	164
13.2 The irrationality of $\sqrt{2}$ and $\sqrt{3}$	165
13.3 Another characterization of Pythagorean triples	166
13.4 Inequalities between means	167
13.5 Chebyshev's inequality	169
13.6 Sums of cubes	169
13.7 Challenges	170
14 Yin and Yang	173
14.1 The great monad	174
14.2 Combinatorial yin and yang	176
14.3 Integration via the symmetry of yin and yang	178
14.4 Recreational yin and yang	179
14.5 Challenges	181

15 Polygonal Lines	183
15.1 Lines and line segments	184
15.2 Polygonal numbers	186
15.3 Polygonal lines in calculus	188
15.4 Convex polygons	189
15.5 Polygonal cycloids	192
15.6 Polygonal cardioids	196
15.7 Challenges	198
16 Star Polygons	201
16.1 The geometry of star polygons	202
16.2 The pentagram	206
16.3 The star of David	208
16.4 The star of Lakshmi and the octagram	211
16.5 Star polygons in recreational mathematics	214
16.5 Challenges	217
17 Self-similar Figures	221
17.1 Geometric series	222
17.2 Growing figures iteratively	224
17.3 Folding paper in half twelve times	227
17.4 The <i>spira mirabilis</i>	228
17.5 The Menger sponge and the Sierpiński carpet	230
17.6 Challenges	231
18 Tatami	233
18.1 The Pythagorean theorem—Bhāskara’s proof	234
18.2 Tatami mats and Fibonacci numbers	235
18.3 Tatami mats and representations of squares	237
18.4 Tatami inequalities	238
18.5 Generalized tatami mats	239
18.6 Challenges	240
19 The Rectangular Hyperbola	243
19.1 One curve, many definitions	245
19.2 The rectangular hyperbola and its tangent lines	245
19.3 Inequalities for natural logarithms	247
19.4 The hyperbolic sine and cosine	249
19.5 The series of reciprocals of triangular numbers	250
19.6 Challenges	251

20 Tiling	253
20.1 Lattice multiplication	254
20.2 Tiling as a proof technique	255
20.3 Tiling a rectangle with rectangles	256
20.4 The Pythagorean theorem—infinately many proofs	257
20.5 Challenges	258
Solutions to the Challenges	261
Chapter 1	261
Chapter 2	264
Chapter 3	265
Chapter 4	267
Chapter 5	270
Chapter 6	272
Chapter 7	276
Chapter 8	280
Chapter 9	283
Chapter 10	285
Chapter 11	287
Chapter 12	290
Chapter 13	293
Chapter 14	295
Chapter 15	297
Chapter 16	298
Chapter 17	302
Chapter 18	303
Chapter 19	305
Chapter 20	306
References	309
