|--|-----|
| <b>Preface</b>   | xi  |
| <b>1 A Marriage for the Ages</b>                               | 1   |
| 1.1 Mathematics and the Hawaiian Islands                       | 1   |
| 1.2 A Model  | 2   |
| 1.3 Appearance of the Rational Unit Circle, Part I             | 3   |
| 1.4 Appearance of the Rational Unit Circle, Part II            | 8   |
| 1.5 What About Other Rational Circles?                         | 9   |
| 1.6 A Parametric Formula for the Unit Circle in $\mathbb{Q}^2$ | 12  |
| 1.7 More General Quadratic Problems                            | 15  |
| 1.8 Conics   | 21  |
| 1.9 Our Method Also Works in Reverse                           | 26  |
| 1.10 Surveying All Solutions                                   | 29  |
| 1.11 The Discriminant  | 30  |
| 1.12 Finding a Rational Point                                  | 33  |
| 1.13 What About Degree 1?                                      | 34  |
| <b>2 Viewing the Whole Algebraic Curve</b>                     | 37  |
| 2.1 An Ancient Indian Parable                                  | 37  |
| 2.2 Viewing Algebraic Curves                                   | 37  |
| 2.3 Doing Math at Infinity!                                    | 48  |
| 2.4 A More Symmetric Model of $\mathbb{P}^2(\mathbb{R})$       | 53  |
| <b>3 Entering the World of Elliptic Curves</b>                 | 55  |
| 3.1 Curves of Degree 3   | 55  |
| 3.2 What Is an Elliptic Curve?                                 | 57  |
| 3.3 Why Irreducible?   | 59  |
| 3.4 Smoothness   | 60  |
| 3.5 Weierstrass Forms for Elliptic Curves                      | 64  |
|  | vii |

|          |   |            |
|----------|---|------------|
| 3.6      | The Discriminant Again                            | 68         |
| 3.7      | Our Method Still Works                            | 72         |
| 3.8      | Examples of Connecting the Dots                   | 78         |
| 3.9      | Mordell's Theorem                                 | 80         |
| <b>4</b> | <b>Every Elliptic Curve Is a Group!</b>           | <b>81</b>  |
| 4.1      | Finite Groups Within an Elliptic Curve            | 82         |
| 4.2      | Finitely Generated Abelian Groups                 | 90         |
| 4.3      | Rank  | 92         |
| 4.4      | Mazur's Theorem                                   | 94         |
| 4.5      | A Gallery of Positive Rank Elliptic Curves        | 97         |
| 4.6      | How Many Curves?                                  | 100        |
| 4.7      | Finding Generators                                | 101        |
| <b>5</b> | <b>A Million-Dollar Challenge</b>                 | <b>105</b> |
| 5.1      | Breaking Up a Task into Many Smaller Ones         | 105        |
| 5.2      | The Birch and Swinnerton-Dyer Conjecture          | 110        |
| 5.3      | The Notion of Expected Rank                       | 119        |
| 5.4      | Expected Rank of a Random Elliptic Curve          | 120        |
| 5.5      | The Tale of Average Rank                          | 122        |
| 5.6      | Rank Results Without GRH or BSD                   | 127        |
| 5.7      | About Manjul Bhargava                             | 130        |
| <b>6</b> | <b>Every Real Elliptic Curve Lives in a Donut</b> | <b>137</b> |
| 6.1      | Complex Curves                                    | 137        |
| 6.2      | Complex Numbers Enlighten                         | 138        |
| 6.3      | Plotting a Complex Circle                         | 139        |
| 6.4      | Plotting a Complex Elliptic Curve                 | 142        |
| 6.5      | Subgroups and Cosets                              | 145        |
| 6.6      | Elliptic Curves with No Oval                      | 152        |
| <b>7</b> | <b>The Genus</b>                                  | <b>155</b> |
| 7.1      | A Few Preliminaries                               | 155        |
| 7.2      | Examples  | 156        |
| 7.3      | The Genus Formula                                 | 158        |
| 7.4      | The Genus vs. Number Theory                       | 159        |
| 7.5      | The Curious Story of Plane vs. Fancy Curves       | 162        |

|   |     |

| Contents                                    | ix  |
| <b>8 In Conclusion . . .</b>                | 165 |
| 8.1 Degree 1                                | 165 |
| 8.2 Degree 2                                | 166 |
| 8.3 Degree 3                                | 168 |
| <b>A What Is a Smooth Complex Curve?</b>    | 171 |
| <b>B Algebraic Curves in the Disk Model</b> | 181 |
| A Teachable Picture                         | 184 |
| Some Basic Definitions                      | 186 |
| Further Examples                            | 189 |
| <b>C Some Code for This Book's Programs</b> | 193 |
| <b>Bibliography</b>                         | 201 |
| <b>Index</b>                                | 205 |
