1	Introduction	1
1.1	Introduction	1
1.2	Content	2
1.3	Notation	5
2	Free Klein–Gordon fields on Minkowski spacetime	7
2.1	Minkowski spacetime	7
2.2	The Klein–Gordon equation	9
2.3	Pre-symplectic space of test functions	12
2.4	The complex case	14
3	Fock quantization on Minkowski space	15
3.1	Bosonic Fock space	15
3.2	Fock quantization of the Klein–Gordon equation	17
3.3	Quantum spacetime fields	18
3.4	Local algebras	19
4	CCR algebras and quasi-free states	21
4.1	Vector spaces	21
4.2	Bilinear and sesquilinear forms	22
4.3	Algebras	23
4.4	States	24
4.5	CCR algebras	25
4.6	Quasi-free states	26
4.7	Covariances of quasi-free states	30
4.8	The GNS representation of quasi-free states	33
4.9	Pure quasi-free states	37
4.10	Examples	41
5	Free Klein–Gordon fields on curved spacetimes	43
5.1	Background	43
5.2	Lorentzian manifolds	47
5.3	Stationary and static spacetimes	52
5.4	Globally hyperbolic spacetimes	52
5.5	Klein–Gordon equations on Lorentzian manifolds	57
5.6	Symplectic spaces	61

6	Quasi-free states on curved spacetimes	65
6.1	Quasi-free states on curved spacetimes	65
6.2	Consequences of unique continuation	68
6.3	Conformal transformations	69
7	Microlocal analysis of Klein–Gordon equations	71
7.1	Wavefront set of distributions	71
7.2	Operations on distributions	74
7.3	Hörmander’s theorem	76
7.4	The distinguished parametrices of a Klein–Gordon operator	77
8	Hadamard states	81
8.1	The need for renormalization	81
8.2	Old definition of Hadamard states	83
8.3	The microlocal definition of Hadamard states	85
8.4	The theorems of Radzikowski	86
8.5	The Feynman inverse associated to a Hadamard state	88
8.6	Conformal transformations	88
8.7	Equivalence of the two definitions	88
8.8	Examples of Hadamard states	90
8.9	Existence of Hadamard states	91
9	Vacuum and thermal states on stationary spacetimes	93
9.1	Ground states and KMS states	93
9.2	Klein–Gordon operators	97
9.3	The Klein–Gordon equation on stationary spacetimes	99
9.4	Reduction	100
9.5	Ground and KMS states for P	101
9.6	Hadamard property	102
10	Pseudodifferential calculus on manifolds	103
10.1	Pseudodifferential calculus on \mathbb{R}^n	103
10.2	Pseudodifferential operators on a manifold	106
10.3	Riemannian manifolds of bounded geometry	108
10.4	The Shubin calculus	111
10.5	Time-dependent pseudodifferential operators	113
10.6	Seeley’s theorem	113
10.7	Egorov’s theorem	114
11	Construction of Hadamard states by pseudodifferential calculus	115
11.1	Hadamard condition on Cauchy surface covariances	115
11.2	Model Klein–Gordon operators	116
11.3	Parametrices for the Cauchy problem	117
11.4	The pure Hadamard state associated to a microlocal splitting	123

11.5	Spacetime covariances and Feynman inverses	123
11.6	Klein–Gordon operators on Lorentzian manifolds of bounded geometry	125
11.7	Conformal transformations	126
11.8	Hadamard states on general spacetimes	127
12	Analytic Hadamard states and Wick rotation	129
12.1	Boundary values of holomorphic functions	130
12.2	The analytic wavefront set	131
12.3	Analytic Hadamard states	133
12.4	The Reeh–Schlieder property of analytic Hadamard states	134
12.5	Existence of analytic Hadamard states	135
12.6	Wick rotation on analytic spacetimes	136
12.7	The Calderón projectors	137
12.8	The Hadamard state associated to Calderón projectors	138
12.9	Examples	140
13	Hadamard states and characteristic Cauchy problem	143
13.1	Klein–Gordon fields inside future lightcones	143
13.2	The boundary symplectic space	145
13.3	The Hadamard condition on the boundary	147
13.4	Construction of pure boundary Hadamard states	150
13.5	Asymptotically flat spacetimes	151
13.6	The canonical symplectic space on \mathcal{I}^-	154
14	Klein–Gordon fields on spacetimes with Killing horizons	159
14.1	Spacetimes with bifurcate Killing horizons	160
14.2	Klein–Gordon fields	162
14.3	Wick rotation	162
14.4	The double β -KMS state in $\mathcal{M}^+ \cup \mathcal{M}^-$	164
14.5	The extended Euclidean metric and the Hawking temperature	165
14.6	The Hartle–Hawking–Israel state	166
15	Hadamard states and scattering theory	169
15.1	Klein–Gordon operators on asymptotically static spacetimes	169
15.2	The <i>in</i> and <i>out</i> vacuum states	171
15.3	Reduction to a model case	173
16	Feynman propagator on asymptotically Minkowski spacetimes	177
16.1	Klein–Gordon operators on asymptotically Minkowski spacetimes	178
16.2	The Feynman inverse of P	178
16.3	Proof of Theorem 16.1	180

17 Dirac fields on curved spacetimes	187
17.1 CAR $*$ -algebras and quasi-free states	187
17.2 Clifford algebras	188
17.3 Clifford representations	189
17.4 Spin groups	192
17.5 Weyl bi-spinors	192
17.6 Clifford and spinor bundles	194
17.7 Spin structures	196
17.8 Spinor connections	197
17.9 Dirac operators	198
17.10 Dirac equation on globally hyperbolic spacetimes	200
17.11 Quantization of the Dirac equation	201
17.12 Hadamard states for the Dirac equation	202
17.13 Conformal transformations	203
17.14 The Weyl equation	204
17.15 Relationship between Dirac and Weyl Hadamard states	206
Bibliography	209
General Index	215
Index of Notations	219
