

# Contents

<b>Preface</b> . . . . .	vii
<b>1 The method of adapted energies for second order evolution equations with dissipation</b> . . . . .	1
<i>by Alain Haraux</i>	
1 Introduction . . . . .	1
2 On the damped and forced single well Duffing equation . . . . .	3
3 On some Duffing-like twin well evolution equations . . . . .	16
4 Universal bounds for the solutions of some second order differential equations . . . . .	24
5 On some damped Kepler problems . . . . .	37
A Appendix . . . . .	50
References . . . . .	57
<b>2 On the dynamics of coupled oscillators and its application to the stability of suspension bridges</b> . . . . .	59
<i>by Gianni Arioli</i>	
1 Introduction and main results . . . . .	59
2 Functional setting . . . . .	63
3 Branches of solutions . . . . .	65
4 Bifurcations . . . . .	67
5 Proofs of Theorems 1.1 and 1.2 . . . . .	72
6 The computer assisted part of the proof . . . . .	72
A The Poincaré map and its derivative . . . . .	73
References . . . . .	74
<b>3 Some remarks about a worst-case problem for the torsional response of a plate</b> . . . . .	77
<i>by Elvise Berchio and Alessio Falocchi</i>	
1 Introduction . . . . .	77
2 Main results . . . . .	80
3 Proof of Theorem 2.1 . . . . .	82
4 Proof of Proposition 2.2 . . . . .	85
5 Proof of Theorem 2.3 . . . . .	87
References . . . . .	89

<b>4</b>	<b>A note on an orthotropic plate model describing the deck of a bridge . . .</b>	<b>91</b>
	<i>by Alberto Ferrero</i>	
1	Introduction . . . . .	91
2	Orthotropic materials . . . . .	94
3	The model of a plate with a one-dimensional reinforcement . . . . .	102
4	Eigenvalues and frequencies of free vibration . . . . .	106
	References . . . . .	112
<b>5</b>	<b>A new proof of existence in the <math>L^3</math>-setting of solutions to the Navier–Stokes Cauchy problem . . . . .</b>	<b>115</b>
	<i>by Francesca Crispo and Paolo Maremonti</i>	
1	Introduction . . . . .	115
2	Preliminary results . . . . .	119
3	Properties of the approximating sequence of solutions . . . . .	127
4	Proof of the main results . . . . .	130
	References . . . . .	134
<b>6</b>	<b>Motion of several rigid bodies in a compressible fluid – mixed case . . . .</b>	<b>135</b>
	<i>by Šárka Nečasová, Mythily Ramaswamy, Arnab Roy, and Anja Schlömerkemper</i>	
1	Introduction . . . . .	135
2	Approximate solutions . . . . .	142
3	Existence proofs of approximate solutions . . . . .	151
4	Proof of Theorem 1.2 . . . . .	164
A	Appendix . . . . .	169
	References . . . . .	173
<b>7</b>	<b>A numerical characterization of the attractor for a fluid-structure interaction problem . . . . .</b>	<b>175</b>
	<i>by Clara Patriarca, Filippo Calamelli, Paolo Schito, Tommaso Argentini, and Daniele Rocchi</i>	
1	Introduction . . . . .	175
2	Problem formulation and analytical preliminaries . . . . .	177
3	Simulation strategy . . . . .	181
4	Results and discussion . . . . .	185
5	Conclusions and further developments . . . . .	189
	References . . . . .	190

<b>8 Nonlinear modeling of suspension bridges</b> . . . . .	193
<i>by Walter Lacarbonara, Giovanni Formica, and Andrea Arena</i>	
1 Introduction . . . . .	193
2 A model of suspension bridges undergoing planar motions . . . . .	195
3 The theory of suspension bridges deforming in space . . . . .	200
4 Concluding remarks . . . . .	208
References . . . . .	209
<b>9 Symmetry and stability in fluids and structures</b> . . . . .	213
<i>by Maurizio Garrione and Filippo Gazzola</i>	
1 Introduction . . . . .	213
2 Symmetry is necessary for the stability of fluids . . . . .	214
3 Is symmetry convenient for structural stability? . . . . .	223
References . . . . .	231
<b>List of contributors</b> . . . . .	233
